The Nestle Laboratory in New York offers a personal service by mail that aids your Nestle Permanent Waver to produce the perfect Permanent Wave.

C. NESTLE, international authority on air, has solved the problem of perma-aving.

; other famous men, Professor Metchni- the Pasteur Institute of Paris, declared in at Mr. Nestle's invention of the perma-ave "is the greatest step forward in hair ever made for the comfort of women."

The New Nestle Meter Scale— a great advance

Mr. Nestle brings forth an invention uch importance to the study of human the X-Ray is to the human body.

a machine that literally "reads" your that reveals its special characteristics and akes the guess out of the permanent wave.

estle Meter Scale removes a great re-ility from the operator. Guided by its s, the permanent waver knows exactly ind of hair you really have and exactly wave it for perfect results.

These readings give him insight and foresight, discover what the eye cannot see, and so make possible a new system of permanent waving that is adaptable to every head of hair:—

The Nestle Circuline Process for perfect permanent waving

This is a personalized treatment—designed to carry out "to the letter," the readings of the Nestle Meter Scale.

Whether your hair be normal, snow-white, black, bleached or dyed—whether you want a tight, medium or loose wave—any one of the 6,000 Nestle Wavers can produce it.

Know your hair before you have it waved

The reading and recommendation cost you nothing

Just fill out the coupon below—and send a small strand of your hair, at least 5" long and about the thickness of a pencil lead—with $1 deposit to cover costs of testing. Do not send combings!

The Nestle Laboratories will then send you a card giving the result of the analysis of your hair. This $1 Deposit will be deducted from the price of your *next* permanent wave—given anywhere in the United States where the Nestle Circuline Process is used. The Nestle Company guarantees the refund of this deposit. Over 6,000 hair dressers and beauty parlors in the United States use Nestle Permanent Waving apparatus.

Have Your Hair Read Now!

With exact scientific knowledge of your hair in advance, your permanent waver cannot fail to give you the style of wave you want—exactly as you want it. It is worth a great deal to be assured of perfect, permanent waves from now on and it really costs you nothing. *Send your hair sample today!*

NESTLE LANOIL CO., LTD.
Established 1905
12 East Forty-ninth Street, New York City
Originators of Permanent Waving

Booklet Is FREE
With or without the hair test

Ask for our interesting booklet, "Taking the Guess Out of Permanent Waving". It is alive with helpful information on the care of the hair. It you full details of the new Nestle Meter nd the Nestle Circuline Process. Sent free equest. Please use the coupon opposite.

NESTLE'S CIRCULINE PROCESS
For the perfect permanent wave

The Nestle Lanoil Company alone, possesses the patented Nestle Meter Scale, and only qualified establishments can offer the genuine Nestle Circuline Permanent Wave. Beware of imitations and misleading claims.

NESTLE LANOIL CO., LTD., LABORATORY
12 EAST 49th ST., Dept. 4-O NEW YORK

Enclosed find $1 Deposit and sample of my hair for an official laboratory reading on the Nestle Meter Scale. It is understood that my $1 will be deducted from the cost of my *next* permanent wave at any hair waving establishment using the Nestle Circuline Process. You are to send me a record of your findings and your free booklet on permanent waving.

The Singer's Etude

Edited for April by well-known Specialists

It is the Ambition of THE ETUDE to Make This Voice Department "A Vocalist's Magazine Complete in Itself"

The Tone Made Word

By Charles Edward Mayhew

IT WOULD seem that singers, of all people, should know how to pronuonce well, and yet, with all the discussion that has been going on for years, every once in awhile some one old enough to know better breaks out in print and intimates that certain sounds in the English language are not fit to sing. This criticism is by no means confined to one vowel, but some pick out AH, some AW, some E, and so forth. A certain person launched a campaign against the use of the vowel AH, in a magazine article not long since, saying that no truly cultured person ever made use of this offensive sound. Another ventures to suggest that the sound of A, as in the word HAT, is not suitable for the singer. Forsooth, my friend, any vowel properly produced, no matter what the language, will be beautiful. The vowel technic of a singer should be so comprehensive, so limitless and unrestricted, that all linguistic sounds can be delivered without marring in any degree the musical quality of the tone. The distortion of vowels, in any language whatever, with the mere intent of thereby improving the tone is inartistic, illiterate, and inexcusable.

True Singing

IT IS true that much of the vocal work that passes for singing is of the most inerudite sort. True singing is the very perfection of human expression. *The breath is the root, the tone the plant, and the word the blossom of song.* No less an authority than the writer of the article on singing, in Grove's Dictionary, says, "By far the greater share of its educational side belongs to the study of the speech organs." To what end, then, should the speech organs be trained? That we may learn to mutilate language, and make it subservient to some preconceived notion of sterile beauty? On the fact that it is not necessary to spoil the tone in the formation of the word hangs the whole tale of vowel technic. Words in speech and words in song are one and the same. The pharyngeal section of the vocal resonator takes little or no part in the formation of vowels, although it is a most important factor in tone development; but the vowel is floated on and moulded out of the resonance initiated there. The pharynx supplies the firm body of the tone, which is moulded into a vowel in the mouth. As the vowel finds its far forward focus therein, the mouth contributes immeasurably to the beauty and carrying power of the tone. Thus the entire cavity, from the point where the breath becomes tone to the very front of the mouth, is utilized in tone and vowel development. The more perfect the impingement of the vowel upon its point of focus and the firmer the seat of the tone upon the breath, the greater the intensity of that tone as it is reinforced by the vibration of the air in the chest cavities below and in the various sinuses above. Any vowel which is unmusical is prevented by rigidity from its full complement of resonance.

The English Vowels

ANYONE who could hold the view that some of the English vowels need to be changed, in order to make them fit to be heard when sung might just as well argue that some of the letters of the alphabet are unshapely. He might go further and invent new ones, leaving the recipients of the communications to form their own opinion of their meanings.

The deficiencies of vowel technic among singers in English is appalling. Most educated people are very particular as to the correctness, in a minute degree, of French, Italian, and German vowels, but as regards English, instead of correcting the faulty production always responsible for defects in quality, they wish the singer to change the language and make use of a jargon that would be considered ridiculous in speech. Singers are frequently criticized for imperfections in their delivery of foreign languages, but rarely ever for even fundamental errors in English. It would seem that in English the majority feel that good diction is a forlorn hope; but why this should be, when the exact science of phonetics can be brought into requisition, is a matter for supreme wonder.

It is not true that clear enunciation necessarily impoverishes the tone, although, when unskilfully attempted, there is an undoubted danger of such a result. If the tone is unconstricted and the consonants are so deftly handled that pure vowels may be floated thereon, the result can be nothing short of musical. So far as one vowel being preferable to another in sound is concerned, we have no option in the matter, for the vowel to be used should be given its dictionary sound, colloquialisms being strictly avoided. It is only as vowels are given a definite form that they are of any use in a language. They are not subject to variation at caprice, any more than are the shapes of the letters of the alphabet.

Facile Use of Sound

WORDS ending in *er* should be pronounced in the ordinary way, as in *per*, the *er* sound being given as a vowel, and formed well forward in the mouth. Facility in the use of this sound will be gained by vocalizing daily on it, and such words as *pearl, girl* and *world,* will then be found as easy to sing as any others. In fact, all sounds partaking of the nature of vowels, even if they are not found in the school category of A E I O U, should be included in the daily scheme of vocalization, and should be considered as media for purity and resonance.

One of the most remarkable proofs of the value of phonetics came as follows: A bad case of throaty tone, combined with a large and well-developed tremolo, had been worked out to a point where the voice had a good deal of resonance; the vowels were well formed, and the whole articulatory process had been freed and organized with nicety, so that a voice, which always had been unmanageable and a source of much annoyance to its owner and her friends, had become both sonorous and mellifluous. An old vocal teacher, and one who incidentally adhered to the absurd notion that the speaking and the singing voices have nothing in common, became interested in the work of this person and requested her to sing to him. He was greatly pleased with her singing, and made special comment on her diction. This beauty of diction had, of course, not the slightest connection in his mind with the unusual charm and facility of her singing. At another time this young lady met another well-known voice teacher, and a few weeks afterwards he happened to visit the church where she sang. The auditorium was so large that he did not recognize the face of the singer, but recognized her by the memory of her musical speaking voice.

It is often said, "If I could learn to breathe correctly, I could sing well. My trouble is that I don't breathe right." Of course the importance of breathing correctly cannot be over-emphasized; but, while correct breathing will make it possible to leave the throat free, to get a good adjustment, and to articulate well, it will not of itself accomplish any of these things for us. All these problems must be worked out through a *sense of freedom* of the vocal mechanism, and the undivided attention of a highly sensitive ear. Conscious intelligence is needed by the student all the time. After voice control has become automatic, then we may perhaps take long flights upon the "Higher planes of thought," but not until then.

In the case of poor vocal tone, when it is certain that the person possesses real musical talent and good health, a musical voice can be developed by proper breathing and painstaking and persevering attention to adjustment, phonetics, articulative agility, and, above all, ear training. Without articulative agility, progress in singing is almost impossible, as a rapid tongue practically clamps a brake upon the entire vocal apparatus. In dealing with the tongue, however, attention should be concentrated not on the stiffness of it, but upon its flexibility and ease of action.

Every Vowel Perfect

NEVER was a truer word spoken than that "every vowel is a part of the voice." Every vowel should therefore be made perfect in sound. If no vowel is to be accepted unless it sounds something like the AH or AW, why not give up the use of language in singing and just train our songsters in impassioned vocalization For this would redound far more to our credit as a musical nation than to affect an interest in songs rendered in English purposely mutilated. It is interesting to watch the faces of an audience during the singing of Stravinsky's "Pastorale," in which vowels are used in place of words.

In writing, one letter is as beautiful as another if artistically formed. Success in writing depends on quality, that is, legibility and evenness. Success in singing depends on quality, that is, accurate articulation and musical tone. It is the fundamental tone that is responsible for quality. The vowel is the final development, the last thing that happens to the tone as it leaves the mouth, unless interrupted by a final consonant. "The tone made word," then, means a pure vowel fashioned from a musical tone. Vowels which have an objectionable sound are either not pure vowels, or else the fundamental tone from which they are made is faulty. Good vocal technic should mean the ability to do beautifully all things which lie within the compass of the art.

The Problem of Interpret with Special Referen to Song

By Erik Brewerton

THE musician, like the poet prets life and ennobles it He does this through a p instinct there is no need to attempt amine here. But great things ar put to little uses, and interpretation in its highest sense is merely the s every artist, is often confined now a wanton emotionalism on the or and to a narrow intellectuality other.

It is noticeable in Mr. Plunket book on "Interpretation in Song" shrewd and acute remarks are th welcome as the music considered less great. What is excellent ir ford's "Crow" is irritating in Sc "Doppelgänger." Great music ca intellectualized. Certain chara songs may be, because here we ca to treat the claims of music lightl question suggested after reading these analyses the author is so giving is, "Will all this enable one the song?" The answer naturally 'One must feel the song first thro music." But when the song is fel complete and direct manner the analysis is not only forgotten in th of the emotion, but henceforth plicable.

Secret of Climax

THERE are "reasons of the he Pascal reminded the logicians day, and a climax in music which made from the heart, but is me effect dictated and elaborated fr head, lacks the true ring of metal. These instructions on "H sing a song" may convey many usef as regards details that are sometime looked, but in the main, songs mu vince of themselves, and need no to introduce them to some one wl takes upon himself to act as thei preter. An actor might carry us aw his Hamlet or Macbeth, but if he series of articles explaining how h these parts—as Poe in an essay pr to explain how he wrote "The Ra we should no doubt be interested b convinced, for we should know that what he left unexplained that move his acting.

The result of this growing ir ualizing of art which stands in su trast with the spirit of the earlier "I tics" is to degrade the artist to the l the craftsman. The craftsman m terest and delight us, but he does no us away. Studying a Schubert s a problem, classifying it, resolv pruning away everything in the ma rhythm or of diction which may offe taste, will never re-create it. Or musical imagination can do this, a impossible to analyze such a pow more than we can analyze the cha Pachmann's playing.

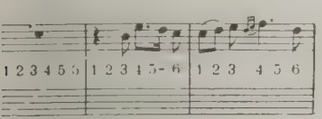
Song is Music

IT IS not surprising, therefore, th who is convinced that song is mu must in the end be judged on the parity as all other music, will find mentioned in this book on interpr which are not of great musical impo and secondly, will complain that s the author's remarks assume a very doxical appearance. As grounds f later grievance the author permits h to say, of "Der Doppelgänger:" purely musical effects of this song a and of Schumann's "Er, der herr von Allen," "This song is entirely n in its effects. It is in this respect t act opposite of "Der Doppelgänger

ng must stand or fall as music. We t dealing with any outlandish form ertainment such as a musically ac- nied recitation in the style of Schu- or of Grieg, nor even with an ex- from an opera in the advanced f "Pelléas et Mélisande." Both are and to select them for their merits h. and then to say that one is less l than the other is paradoxical. No would think of saying that a Chopin ise or Scherzo is less musical, being elodic, than a Chopin Nocturne. Is 's recit., "Deeper and deeper still," usical than the air, "Waft her, an- that follows it?

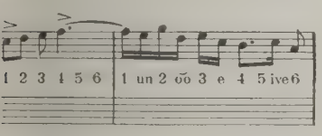
n a writer warns the singer against ; "purely musical effects," he surely simply that the singer should not the wrong musical effects. When he contrasts "Der Doppelgänger" with "Er, der herrlichste von Allen," he surely means that each has its own character. A singer would probably succeed better in the one than in the other because one would appeal to him more than the other. But that there is any radical difference between them, or that those who preferred "Er, der herrlichste von Allen" were more musical than those who preferred "Der Doppelgänger," which the author claims to be "the greatest song in the world," it is difficult to see. If song is partly literature, partly drama, and partly music, it is a sorry hybrid, and it is obviously better to read literature, hear pure instrumental music, and visit the theatre for the drama. And this is what intellectual singers more or less imply.

—*The Musical Times.*



Singing in Correct Time

By Rhoda G. Fowlkes

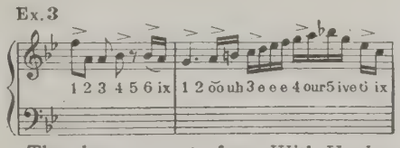


just as important for singers as for s to execute their music in exact

he most difficult arias it is often or the vocalist to "come in" exactly right moment, after rests, pauses, nd so on, as the accompaniment does ways give one a cue.

izing this fact, I first write out the ver each note with a pencil (to be later); then, playing the air, I sing:

Two, Three, Four, and so on," in- of the words, until it is thoroughly ed.



Where there are rests I count very softly to the tone of the last note, then come in stronger again when the voice part starts.

The first note after a dot or a tie I give a slight accent.

This is also a good system by which to learn long runs, as it makes one get the correct pitch on each note and keeps one from "skipping over" any notes.

I find this better than "clapping drills" for singers, as the pupil, having learned the air in rhythmical time, when the real words are put to it will naturally sing it correctly.

Ex. 3

The above excerpts from *With Verdure Clad* are examples. Example 1 will serve as a guide to the method of writing out the counts; then Examples 2 and 3 will guide the student as to how to apply the counts in practicing melodies.

The Child's Music

ETUDE:

ation of children is, in most states, sory, whether or not the child has tendencies toward reading, writing or etic; yet parents are inclined to say a child does not take to music or prac- shall stop taking lessons, because it is e to make him practice if he does not o. None have talent to practice; the is towards the music.

der to play what they desire the child at will work at an instrument until his wish is attained; whereas a child of not high musical inclinations, or lacking ambition or energy, needs for a time urgings from parents and teachers.

Parents may do well to consider;

That music study in many and most cases is nine-tenths conscientious practice and one-tenth careful guidance of the teacher.

That the musical bent encouraged may discourage wasteful tendencies.

That music lessons should be studied just as are any others.

Nine times out of ten improper practice before lessons is the cause of unsuccessful music study; and if parents will see to it that the pupil practices, at regular periods, even of short duration, practice that is earnest enough to fix as much of the music lesson in the child's head as it is required to learn of each school study, the child of even modest talent will learn to play reasonably well.

141 Boylston Street, Boston, Mass.

A Summer Session

Beginning June 21st

Length of course arranged to suit individual convenience

Study

~at an amazingly low cost, averaging $150 or less for a full course of study under master teachers

Master Classes

Master Classes in Piano, Voice and Violin, conducted by renowned artist teachers, at so low a cost as to be within reach of all.

Classes in Teaching Repertoire, Music Pedagogy (Normal), Public School Music, Harmony, Counterpoint, Composition, History and Appreciation of Music; Accompanying, Ensemble Playing, Sight Singing, Orchestra Conducting, Choral Conducting, Dramatic Art, Dancing and Languages; a special course in Community Music, and another in Motion Picture Organ.

Teachers' Certificates may be earned by completion of prescribed Courses.

Private instruction available from the entire Faculty of more than one hundred instructors, in any subject desired.

Dormitory accommodations provided at moderate rates.

Vacation

All the good times of a real vacation along with the advantages of summer study

Eight Vacation Excursions

All the good times of a real vacation can be enjoyed in a series of eight vacation excursions, conducted by the School. The schedule includes: 1. An automobile trip through the Chicago Parks, concluding with a visit to the studios of the famous sculptor, Lorado Taft. 2. A visit to the Art Institute. 3. Capitol Theater Party. 4. A visit to the Field Museum. 5. A boat ride on Lake Michigan. 6. A visit to Newberry Library and the Chicago Historical Society. 7. A visit to the Chicago Tribune, to see the printing plant, the great Radio Station WGN, and the Observatory Tower. 8. A journey in chartered car to Ravinia Park. Picnic supper in the Park. *Opera in the evening with Metropolitan and Chicago Opera Company artists.*

Free recitals will be given every week by artist teachers of the School.

Opportunity

~for professional advancement

Teaching Positions

The Sherwood Music School now has Thirty Neighborhood Branches in Chicago. These Branches give rise to positions for advanced students and teachers who wish to teach and at the same time continue their study under our artist teachers. There are also excellent positions available for our students, when qualified, in the thousand and more Branches of the School, located throughout the country. *Additional teachers for the 1926-27 teaching season in the Chicago Neighborhood Branches will be engaged from those in attendance at the Summer Session. The number of openings is so large that any talented, ambitious student or teacher, with reasonable preparation, may be sure of an opportunity in our organization.*

Sherwood Music Schoo

Founded 1895 by Wm. H. Sherwoo

FINE ARTS BUILDING
410 So. MICHIGAN AVE.
CHICAGO, ILLINOIS

As a means of contributing to the development of interest in opera, for many years Mr. James Francis Cooke, editor of "The Etude," has prepared, gratuitously, program notes for the production given in Philadelphia by The Metropolitan Opera Company of New York. These have been reprinted extensively in programs and periodicals at home and abroad. Believing that our readers may have a desire to be refreshed or informed upon certain aspects of the popular grand operas, these historical and interpretative notes as several of them will be reproduced in "The Etude." The opera stories have been written by Edward Ellsworth Hipsher, assistant editor.

Janacek's "Jenufa"

resentation of novelties at an opera world fame is, for the most part, to the later works of composers ve already made reputations. In of "Jenufa," however, we have a mposer, whose works are very known to Americans, although he past middle life.

Janacek was born in Hukvaldy, , in 1854. His father was a school with a large family. His parents ry poor and the youth of the boy ontinuous struggle. His first musi- uction was received in a choir con- by the Bohemian, Krizkowsky. At ive we find him entering the Leip- servatorium—an age long past the en most students have finished their atory training. Like Edvard Grieg, id the stern and somewhat stilted ie of the famous Reinecke not to his He left for Vienna, determining to a piano virtuoso. In this he failed. ame conductor of the Philharmonic and Director of the School for Or- at Brünn in 1882. He then com- to compose part songs and choruses ecame immensely popular in Czecho- a. In fact, he was first regarded as oser of the people. He now teaches ue and in Brünn, where he became or of composition at the Conserva- 1919.

ek has composed six operas up to sent time. These works have dis- folk titles, such as "The Quick- Fox," "The Storm," "Katja Kaban- 'Fate," "The Excursions of Mr. k," and "Jenufa," which was for- known as "Her Step-Daughter." In to his compositions, which include honic poem, "The Musician's Child," ned last year in London, Janacek has books upon "The Musical Struct- National Songs" and "Chords and Connections."

ufa" was written in 1901 and was for the first time in Brünn, in 1904. It was not presented in any other opera house until twelve years later, when it was seen in Prague. The composer was then sixty-two years of age and tasted his first draught of greater musical triumph. In 1918 it was given in Vienna and Jeritza found this new work in her repertoire.

The distinctive characteristic of "Jenufa," from the musical viewpoint, is found in the radical philosophy of its composer, who is unaffected and naturalistic in all things. Although he has made a life study of folk songs, and has done that rarest of things, written folk songs which have been adopted by his own people, his operas are based upon a totally different conception from that of other composers of folk opers—such for instance as Humperdinck's "Hansel and Gretel" and Smetana's "Bartered Bride," which are replete with infectious melodies written in folk song style.

Janacek, on the contrary, feels that music for a music drama must follow the natural speech of the people. He thus abandons the conventions of rhyme and ordinary metre and melody. The text of "Jenufa" is not a poem in the ordinary sense, not a libretto, but a prose drama of the people, a terrible, humanistic story of the tragedy of a Moravian peasant girl, whose lover deserts her, whose child is murdered and to whom happiness comes in a very dramatic peripetia. This must not be taken to mean that the work is unmelodic or unmotivated. When Janacek feels that the natural trend of the story calls for a song, more or less conventionalized, he does not hesitate to introduce one. For the most part, the fabric of the score is an astonishingly free tonal tapestry. The tonalities are not as vague as in the modern French school or even in Moussorgsky; but it becomes at once clear that Janacek has reached that phase of artistic advancement and larger technic, where he is wholly unfettered by the limitations of the classical school.

The Story of Jenufa

e plot of the opera is founded on a drama of Moravian village life, by Gabriele Preiss. l *Widow Buryja* has a daughter-in-law, the *Sexton's Widow*, also a grandson, *Stewa*, step-grandson, *Laca*. Dramatic interest centers about *Jenufa's* love for *Stewa* and for her.

t I. *Old Buryja's Mill.* The chances of *Stewa* being exempted from military duty ng discussed. Most interested of all is *Jenufa* (foster-child of the *Sexton's Widow*), m marriage has become a necessity. *Stewa*, drunken, enters, boasting to the recruits. themselves, *Jenufa* tells *Stewa* of her humiliating secret; and *Stewa*, assuring her constancy, stumbles off the scene. *Laca* appears, twits *Jenufa* for her devotion to offers her a bouquet in exchange for a kiss, which being refused, in the ensuing e he slashes her face with a concealed knife and runs off.

t II. *Interior of Home of the Sexton's Widow.* Hidden here, *Jenufa* has borne the f her shame. Her foster-mother urges that she pray the child may die. *Jenufa*, of her beauty by the knife-cut, no longer interests *Stewa*. The *Sexton's Widow enufa* a sleeping potion, summons *Stewa* and pleads that he make *Jenufa* an honest ; but he refuses even to look at his son and announces his intended early marriage *olka*, daughter of the *Village Judge*. *Laca* enters, and, after some hesitation, accepts s child as his own for the peace it will bring to *Jenufa*. But, at his moment of ng, the foster-grandmother has assured *Laca* that the child was dead. She sends way, and, to remove all obstacles, hurries out and drowns the child beneath the ice. awakes, asks for the child, is told that he has died of fever during her two days p, and, moved by *Laca's* kindness, agrees to their marriage, though not without baring ist.

t III. *Home of the Sexton's Widow. Old Buryja*, the *Village Judge, His Wife*, a, and *Stewa*, whom *Jenufa* has insisted that *Laca* shall forgive, arrive for the g. The *Sexton's Widow* has raised her hands to bless *Jenufa*, when voices from t announce the finding of the baby's body. The *Judge* re-enters with the child's red nd the crowd denounces the despairing *Jenufa* until the foster-mother confesses her *Karolka* casts off the odious *Stewa;* and *Jenufa*, after forgiving her mother, who en taken into custody, turns to say farewell to *Laca*. But *Laca's* love endures and es her past as she pardons the wound he inflicted on her cheek for love's sake.

A Perfect Little Piano

An age-old dream of the master makers

IT remained for the Wurlitzer craftsmen to make the dream of a practical, small piano come true. Now they offer you the Wurlitzer Studio Piano—a wonderfully compact, small piano possessing all the artistic excellence of larger instruments.

Superb tone quality is here—that pure, rich resonance that distinguishes all Wurlitzer pianos. The full 88 note scale has been retained. The whole has been condensed into an instrument that stands no more than 3 feet 8 inches high.

For apartments, studios, small homes and dozens of places where space is limited, this diminutive Studio Piano is ideal. Its trim grace and beauty lend a fresh charm to the appearance of any room.

If you have always wanted a piano but have waited 'til you could afford a *good* one, see these truly remarkable studio pianos as soon as possible. The prices are surprisingly low—Studio Piano, $295 and up. Studio Player, $445 and up. Prices F. O. B. Factory. Payment on most convenientterms.

Question and Answer Department

Conducted by

ARTHUR DE GUICHARD

A Common Chord and Its Inversions.

Q. What is the chord of the 6-4 *in the key of E? What is a* 6-4 *chord, anyway?*

J. T. M.

A. A Common Chord is a note acompanied by its third (major or minor), 5th (perfect—that is, containing seven semitones) and octave. It would be better to call it a triad, a chord of three notes, the key-note, its third and its fifth, because the octave is merely the repetition of the bass note. In the key of E major, the triad is E—G♯—B. If you invert it, putting the E at the top, you will have G♯—B—E, or the 6-3 chord, so named from its intervals from the bass, B being a third and E a sixth from the G♯. This is termed the first inversion. Invert this again, by putting the G♯ at the top and you will have B—E—G♯, or the second inversion, B to G♯ a sixth and to E a fourth, whence the 6-4 chord. This applies to every key; the original position being (in solfeggio) do-mi-sol; first inversion or 6-3 chord, mi-sol-do; second inversion of 6-4 chord, sol-do-mi, the first note in each case being the bass.

The Various Forms of Allegro

Q. You will render me a great service for my teaching if you will give me a list of the different styles of "Allegro," together with their meanings.—Piano Teacher, Saint Louis, Missouri.

(All Italian Names)

A. Here is the list requested:

Allegro agitato—Quick and agitated.
" *assai*—Fast enough. Quicker than simple allegro.
" *commodo* or *comodo*—An easy, graceful allegro.
" *con brio*—Quickly, with spirit.
" *con fuoco*—Rapidly, with fire.
" *con moto*—Quickly, with sustained celerity.
" *con spirito*—Quickly, with spirit.
" *di bravura*—Quickly, with difficulties, to display the performer's ability.
" *di molto*—Much quickly, exceedingly rapid.
" *furioso*—Rapidly, with fury.
" *giusto*—Quick, but steady.
" *ma graziosa*—Lively, but gracefully.
" *ma non presto*—Quickly, but not too fast.
" *ma non tanto*—Quickly, but not too much so.
" *ma non troppo*—Quickly, but not too much.
" *moderato*—Moderately quick.
" *molto*—Very quick.
" *risoluto*—Quickly, with firmness and decision.
" *veloce*—Quickly, with velocity.
" *vivace*—Vivaciously.
" *vivo*—Quick and lively.

Old English Country Dances

Q. Now that there seems to be a movement to resuscitate old-time country dances, can you give me some account of them, together with the music to which they were danced? Was the dance really English? Was it not originally French or Italian?—W. B. G., Detroit, Mich.

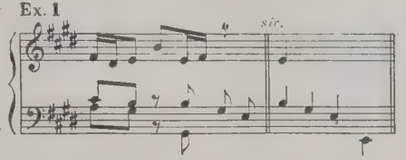
A. The country-dance, under many names, has been popular in England for many centuries. Originating in England, it was copied and adopted in France as the *Contre-danse* and in Italy as the *Coranto*. In the Bodleian Library, at Oxford, may be seen the music of a tune, called "Country Dance Tune," dated about the year 1300. One of the old English names for country dances was "hey digyes" or "rounds." The "Hay," or "Raye," was probably the same as the "Hay digyes." "Dargason" was another name in vogue for a country-dance dating before the Reformation, the tune of which is still employed today in country villages. Among the most popular tunes used for the dance, even today, are: "Sir Roger de Coverley," the "Tank," the "Triumph," "Gee-ho, Dobbin," "Merrily Danced the Quaker's Wife," "Petticoat Loose," "Gossip Joan," "The Devil Among the Tailors," "Moll in the Wad," and the "Wind That Shakes the Barley," of which the writer possesses the music. The set-dances, known as "Quadrilles," "Lancers," and "Caledonians," are but arrangements of the Country Dance. For further particulars consult William Chappell's "Popular Music in the Olden Time."

What is Technic?

Q. What is the real signification of the word "technic," as applied to music?—D. P., Pawtucket, R. I.

A. Technic (English, from the Greek *"techne,"* art), *technique* (French), *technik* (German), are employed as a general name for the system, devices, and resources of musical art.

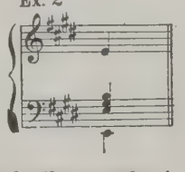
Time Notes—Accidentals—Bar-strokes.



Q. Who invented the shapes for the different time-notes, and when? When were bar-strokes first introduced? When were accidentals first employed?—Christine, Tunis, Africa.

A. The system for indicating the relative times of notes by employing different shapes is supposed to have been invented by Franco of Cologne, about the year 1145. As far as can be ascertained, music was first divided into bars, or measures, by means of perpendicular bar-strokes, about the year 1574. Accidentals (♯, ♭, ♮) were first introduced during the eleventh and twelfth centuries. The ♭ and ♮ were applied at first only to the note B, of which they are modified forms, the ♭ really standing for B♭ and the ♮ for B♯. The ♯ was like the sign of multiplication, or St. Andrew's cross.

The Harmonious Blacksmith.

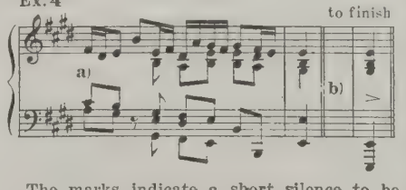


Q. Is the following passage, from Handel's "Harmonious Blacksmith," to be played arpeggio-like, or not?

Ex. 1

The last chord of the piece is written thus:

Ex. 2



Also, what do these marks (⟋⟍) indicate?—Elise M. H., Oakland, Cal.

Ex. 3

A (a) *Not* arpeggio. Play as follows:

Ex. 4

The marks indicate a short silence to be observed by both hands.

Marks of Expression.

Q. If such marks as *are not printed on the music page as they ought to be, but frequently are not, how long should I hold, or rather, play p, pp, f, ff, cresc., dim., rit., in fact, all expression marks, for the length of the measure, for one note, or for one chord only? Most music in albums is very imperfect in expression marks. Pedal notation is sometimes entirely omitted. I have been using my own judgment, but realize that I cannot do that correctly.*—W. A. M., Sunland, California.

A. As a general rule a sign such as *p, pp, f, ff,* or *rit.,* should be observed and maintained until corrected by another sign. Careful study and analysis of each phrase will reveal the culminating point and points of the composition. Let the expression suggested by the composer's indications work up to, or away from, those points. Where there are no such indications, you must let your own study and analysis, plus your musical sentiment, dictate the expression which you have logically deduced. The same advice applies to the use of the pedal, but care must be observed not to keep the damper-pedal down during changing harmonies, or changing chords, producing a discord.

COMPACT

Beauty

It is the day of *"the Compact"*.

Beauty, of course, is no more "only skin deep" today than it ever has been. Now, however, it is the fashion to proclaim more vividly—at all times and in all places—the desire to be beautiful. The proper use of the right *Compact* is the first requisite.

The Organist's Etude

Edited for April by Well-Known Specialists

It is the Ambition of THE ETUDE to make this Organ Department "An Organist's Magazine Complete in Itself"

Organ Recitals

By William C. Carl, Mus. Doc.

IN TREATING the organ from the recital standpoint, there are many interesting things to consider. Should the organ recital be eliminated from our musical life at the present time, one of the potent factors in educating the masses would be done away with. The organ recital is an institution of long standing and will always be with us. In every community there are thousands who by this means have for the first time heard the master works of the great composers and have thus cultivated a taste for the best in music.

In our own country it required a decade before the people would listen to the works of Bach and his contemporaries. They would have none of them until they had been repeatedly subjected to "storms" and "tempests" of no mean order, refusing to be comforted until the lightnings had ceased, the storm clouds rolled away, and the vesper hymn had been sung in trembling accents by an invisible choir.

It has been necessary for the people of all countries to be educated in music. Even the great Johann Sebastian Bach was not contented with himself, for did he not walk fifty miles on foot to hear Buxtchude play in Lubeck? Did he not also gain the necessary knowledge which completely changed his previous style of writing? If this had not occurred, he would never have possessed the monumental works for the organ which he bequeathed to the world.

Americans Study and Work

Americans have demonstrated their willingness to study and work for the best in Art, as has been repeatedly shown by the numbers who have gone abroad and those who have flocked to our musical centers here.

The organ is the noblest of instruments. It is capable of expressing every known emotion, and is a complete orchestra in itself. Berlioz said, "The organ is Pope; the orchestra, Emperor."

It remains for the organist to bring from the instrument a response to his ideas in order to convince the audience. It has been justly said, "The soul of the organ is the organist."

An organ recital can be one of two things. It can be interesting, or it can be uninteresting. If the former, there are many things we may well consider as valuable requisites.

The organist must possess talent of the highest degree and aim to develop it by means of systematic study, must acquire an adequate technic of both hands and feet, must have a sense of rhythm and with it brilliance of execution. The foundation principles of organ-playing should be patiently studied. Master the trio form, in order to gain facility and independence of hands and feet; and make an exhaustive study of theoretical subjects. The minutest detail should never be lost from sight.

Memory Playing

It is gratifying to note the number of our recitalists who are now playing their programmes from memory; and this argues well for the future. Memory playing should be insisted upon in all study courses, from start to finish.

One night when Bonnet was touring in the middle West, the committee accompanied him to the station after the recital. As the train approached, one of them exclaimed, "Why you only have a small grip, where is your music?" Bonnet replied, "I carry my baggage in my hands, but always my music in my head!"

Referring again to Bonnet, when he arrived in Paris from Bordeaux, to study at the conservatoire, Guilmant would not allow him to proceed until he had studied and memorized the Six Organ Sonatas Bach wrote for his son, Wilhelm Friedmann, in order that he might become an expert organist. Bonnet considers this to have been one of the great factors of his success as a virtuoso.

Every aspirant for fame would like to be a recitalist, and all recitalists aim to become virtuosos

To throw one's hat in the arena, and land it on either stage, requires a certain preparation few are willing to undergo. I refer to the subject of slow organ practice. Volumes have been written on the subject; but the fact remains that only about one in a thousand has yet grasped the idea of what slow practice actually means and why it is necessary to do it. Harold Bauer says, "No one can play with style until each note the composer indicated has been correctly played."

Guilmant's rule was to take a certain amount of the daily practice and sub-divide the groups, giving one beat to each sixteenth note, in order that every note should receive its exact value, special attention being given to a correct playing of the dotted notes. I recall a certain passage he insisted upon being practiced in this manner for six weeks. Following this, vary the tempo, transpose passages in various keys, both staccato and legato, and thus continue until the required tempo of the piece can be correctly played.

When Bonnet first came to America, people asked for the privilege of hearing him practice. As his recital preparation was always done in a slow measured tempo, with the exact note valuation attended to, with not over two or three manual stops and a four foot stop in the pedals, it was naturally not a very inspiring performance.

Acquiring Confidence

After listening a few moments, the auditors would exclaim, "Why he is only a beginner," and would leave the auditorium. In order to secure confidence it is an excellent plan to play over each selection in this manner the day of the recital. It will also help materially in maintaining the form and symmetry of the composition.

Coming to the subject of registration, and with a modern organ at command, I often think of Michael Angelo, and his masterpieces in the Sistine Chapel in Rome—such marvelous colorings, tints and effects, for centuries have startled the world. A story is told of the visit of Gounod to one of the well-known organ lofts in Paris. The organist played one of the master Fugues of Bach. As the finale died away, he exclaimed, "It is as it were a great painting hung down from heaven, suspended there without a nail!"

With the modern organ before us, we have only to make our choice of stops, mix our colors, the same as the artist does with his brush or as the orchestra does with a hundred different instruments, and produce a tone color that will represent the idea we intend to express. I do not favor too frequent changes of registration, unless the composition absolutely requires it, nor to use all the resources of the instrument in a single composition. In this connection, may I suggest a better understanding of the use of the balanced swell pedals, and a moderate use of the tremolo.

Improvisation

Along with the great advance made in organ-playing, we should take up the study of improvisation with a zest. For years the foreign artists have posed the question, "In America, you have many fine performers, but why don't you do more with improvisation?" Since the tours of visiting virtuosos, there has surely been a demand for it. The solution of the problem is in creating an enthusiasm amongst our students for the subject. Guilmant studied it for twenty years, and the world will always know of his marvelous achievements. Let us, therefore, go to work with a will.

Program Making

The art of program making must not be forgotten. A large repertoire may be at one's command; but the success of the recital depends largely on how to arrange the selections. An excellent plan is to avoid having two pieces, written in the same key, following one another. Aim for contrast of style and tone color. As the middle sections of many organ pieces demand a similar registration, either choose another number, or else place them as far apart as possible. Guilmant often devoted more time in grouping the numbers of the program, than in its actual preparation at the organ. Mental preparation is also strongly recommended. Always build up the program to a climax, and let it end there. An anti-climax detracts, and is to be avoided. An organist should possess a kaleidoscopic vision in order to cope with the variety of twentieth century programs. Surely it needs an active mind and well schooled brain to do them all equally well. In these days we are asked to play not only an organ recital pure and simple, but also one of the following: An historical recital, one with vocal and instrumental assistance; a wedding recital; a funeral recital; a twilight recital; the picture recital; a fifteen-minute recital preceding the church service; one devoted to a particular composer or subject; the private house recital; or one devoted to the various ecclesiastical forms. There may be others, but surely this list is varied enough.

We should not lose sight of the wonderful Bach *Chorales;* for in them we find the heart of the Cantor of Leipzig; nor of the *Chorales* of César Franck, with their mysticism and marvelous power of expression. Naturally the great *Preludes and Fugues* of Bach are a foregone conclusion, but their exact place on the program is worth studying. The music of the fifteenth, sixteenth and seventeenth centuries should find a prominent place; and there is a large amount available. Play the works of composers of all countries, that have merit; but never forget that we have available works right here in our own country that should not only be included in program lists, but that we also should give with greater frequency entire programs to the works of our gifted Americ posers. As in the other arts, the v the modernists have kept abreast times and should be accorded a pr place.

How to Improve the Organ Re

First of all, maintain the highes ards; play only the best in music is a wealth of material to choose fr sufficient research, only, is needed t Make the playing musical; and keep in mind the fact that the orga a mechanical instrument. The c capable of many varieties of touch years ago this was not considered but today it has been demonstrat and over again. Cultivate accentua rhythm to a high degree. Avoid p the breaking of the rhythm wher ing the registration, as thus the atte the audience is invariably diverte this occurs. Play naturally, and constantly aim at producing ar Above all, learn to concentrate and the mind focused on the subject Always wait before beginning, s gain poise before starting. Perf difficult to attain, but we can alw to do our best.

Free Organ Recitals

I do not favor the playing of citals. Why should an organist st prepare himself for years, and th his talents and time freely to the Surely no other artist is asked to with the frequency of the orga story is told of Marchand, the French virtuoso-organist of the teenth century. He always attracte houses when he appeared, but ne money home to his wife and fami king, having been appealed to, his wife that at the next recital sh receive half the fee. When the arrived, the house was filled to th and great enthusiasm prevailed. W first half of the program was co Marchand suddenly stopped playin the organ and said, "If I receive fee, then I play half the recital," the hall. This incident must not c impression that organists are me It is quite the opposite, from al points.

Looking Forward

May I offer my congratulations preciation to the women organists they have done and accomplished are a credit to the profession a added much to its lustre and succ

Let us, therefore, aim to make t recital of the future a greater achievement than ever before. Le America to the front, and let cons work be our watchword.

Arranging Piano Music for the Organ

By Helen Oliphant Bates

every church in which a vocal solo uartet forms part of the service it will ne of the organist's duties to arrange piano accompaniments at sight for the n. Practice, experience, good musical rment and a careful study of the re- ements of each piece will be necessary. a few general suggestions may guide student in his early efforts.

rst, it must be remembered that the uals of the organ not only have a ler compass than the piano, but also ess useful in their upper and lower reg- s. The high chords and figured pass- , which are brilliant on the piano, will iercing and unpleasant on the organ. methods of softening them are possi- The first is to play the disturbing ds an octave lower and the second is to as written with a sixteen foot stop or ler. The full rich tones of the lower ves of the piano will sound muddy on rgan. These may be made more clear more beautiful either by transposing up an octave or by including four foot in the registration. The lowest tones e pedals, on the other hand, are always l. Passages which are too low to d well on the manuals may sometimes ven to the pedals with excellent results. precaution, however should be ob- ed; that is, to make the lines complete. elodic line or bass progression started e manuals should not be continued on edals or the reverse. An idea should nished on the keyboard upon which it gun. Light and trivial figures are not d to the deep and dignified character e pedals.

nlike the piano, the organ has no per pedal. It is therefore necessary rovide a background of sustained tone. is accomplished either by adding a or by holding one of the voices al- y present. Repeated chords, for ex- e, should be played with some of the s held, preferably the outer ones, and about two of the inner ones repeated. This gives the rhythm without causing the disagreeable effect which would result from repeating the whole chord. As long as some of the voices are sustained a great deal of motion may be secured in the remaining voices without producing a bad effect.

The arpeggios, which are beautifully blended together by the damper pedal on the piano, are apt to sound empty on the organ, unless great care is taken to play them very legato. The tones may even over-lap or the first note of the arpeggio may be held while the others are being played. Frequently it is advisable to add a part. This added part is especially desirable when the piece does not contain a suitable bass for the pedals. The original bass will then be given to the manuals.

When the harmony is thin it is difficult to get the proper balance between manuals and pedals. This is especially true of two-part harmony, which, when played with one part on the manuals and the other on the pedals, will seldom give satisfactory results. These places should be played on the manuals without the pedals. If the parts progress too low they may be transposed up an octave. The young organist should not think it necessary to keep his pedals going constantly. Many places will sound effective on the manuals alone; and the pedals will resume their duties with added forcefulness after a short rest.

Rests on the organ are invaluable. The cadences of piano music usually fill the entire measure; but on the organ a complete break is very desirable, not only because it is a good means of securing variety but also because it affords an opportunity for change of registration.

These few hints may start the organist on the right track. After he gains facility in placing his piano music in the proper register for the organ, and providing for continuity of tone, he will begin to realize for himself the many other details of artistic arrangement.

Advantages and Disadvantages of the Coupler

By Virginia Thomas White

ERY organ instructor must answer for elf the question, "Should my beginners on an organ having couplers?" To eginner it makes little difference; but nstructor must be the judge. If the nt has a good ear, an organ without lers would be advisable. If the stu- is inclined to take the easiest way out e line of least resistance, let him work n organ without couplers.

ychology plays a definite part in the ion as to which type of an organ is for each type of student. The stu- s disposition must be taken into con- ation, too. Should the instructor fail ive the matter proper consideration, ay have reason to wonder at some date why his organ students fail to ress as he feels they should.

ie organ with couplers is very helpful e beginning student because the pedals ather vague and mysterious; but when ey moves with the pedal the student learns that he has a guide in the coup- Whether his ear is true enough to tell or not, the keys will tell him if his notes are not correct. That vague- in connection with the pedals soon pears and the student finds that he play three or at least two scores of though they are far apart.

t the disadvantages of the keys mov- with the pedals are as prominent as dvantages. The student is prone to little heed to pedal exercises because the keys are his guides. The ear gets little, if any, training because, as the student will say, "You have the couplers." In fact, the couplers are made to carry many responsibilities and the student thinks organ playing is very easy.

The beginner who studies on an organ without couplers finds himself on his own initiative. He must learn his pedal scales just as his baby fingers learned the piano scales. The distance must be gauged between the pedal notes, for there is nothing to guide him but his ear. Ear-training is an important part of organ-playing; and one learns to rely upon his ear when he has no couplers.

He who studies the organ must be patient; for time is very essential. If he works on an organ without couplers he may become discouraged, though in the end his will be the best foundation. If the student's ear is not true he will do little without couplers, for there will be little to guide him at first; but gradually he will learn to listen and his ear will become more true.

In fact, it is a real question as to which type of organ is best for the beginner. For more advanced students it is a question, too. A student who has learned on an organ without couplers finds an organ having couplers somewhat confusing and *vice versa*. It is simply a matter that every organ teacher should take into consideration when he studies his students.

WEAVER
GRAND PIANOS

In thousands of worth-while homes —on the concert stage —in conservatories of music, the inimitable tone of Weaver Grand Pianos is an inspiration, and the passing years serve but to mellow it to more subtle harmonies— serving joyously the musical needs even to the third and fourth generations.

WESSELL, NICKEL & GROSS NEW YORK TRADE MARK
The Sign of the World's Standard Piano Action

The Right Start In Music Practice

ACQUIRING *correct touch* is the first essential in your child's music practice. As touch is transmitted to string by the *piano action*, it is essential that little fingers be given the early advantage of a perfectly balanced and delicately responsive action.

Choose for your child a piano equipped with the Wessell, Nickel & Gross piano action. Then will daily music practice begin with a piano action developed to the very borderland of perfection. You will be assured of a quality piano, too, for this famous action is found only in worthy instruments.

The Wessell, Nickel & Gross action is the *world's highest-priced piano action*—used since 1874 by leading American piano manufacturers—built by the oldest, largest and leading makers of high-grade piano actions.

Organ and Choir Questions Answered

By Henry S. Fry

President of the National Association of Organists, Dean of the Pennsylvania Chapter of the A. G. O.

Will you kindly advise me as to when should rise, also the congregation? organist in a village church (United) congregation of about one hundred choir of fourteen. Shall I give a chord? I also like to know how to seat the We have three strong sopranos, four ones, three altos, one tenor, and three (not strong). We have three scats, olding five.

There is no set rule as to when a choir rise. A safe and simple arrangement be to have them rise at once as you playing over the hymn-tune. It will ake no difference if you do not play of the hymn-tune. This arrangement made by you so far as the choir is con-

A simple arrangement in reference regation would be to have the minister that the congregation rise with the Of course there might be objection to rangement on the part of the congrega- a long hymn-tune were played through. dently this is not your custom. Any ement you may wish can be made if taken that choir and congregation un- d the plan. We do not quite under- our question. "Shall I give a chord?" mean a separate chord before starting ging of the hymn or the verses of the ve would not advise it. Have the choir and that they are to begin *with* the Your "stops" between the verses of a should be of equal length—in keeping ie rhythm—so that those in the choir he time of attack. Preliminary notes ds are not in good taste. In anthems a printed Introduction or Prelude, a nay be given for the pitch if you do h to play an Introduction or Prelude n the anthem to be sung. This chord be released and organ and choir start r. We would suggest the following r seating the choir—assuming the choir ice the congregation:

e Tenor				Three Basses
opranos g Weak				Three Altos
g Weak	Sopranos Weak	Strong	Weak	

cattering the strong sopranos among aker ones the latter have the advan- more help from the stronger ones than be true if the stronger ones were l in one place. If the one strong so- objects to being placed on the second u may be able to convince her by tell- you are placing her there as one of ders. If the choir seats are placed ne ends to the congregation, our sug- would be as follows:

2

If on left side

Three Altos	Sopranos Weak Strong	Sopranos Strong - Weak - Weak - Strong - Weak			

gation end oir seats

If on right side

Weak Strong	Sopranos Strong Weak	Sopranos Weak Weak Strong	Three Altos	Three Basses	One Tenor

Congregation end of choir seats

reason for changing the seating in this e is to bring the one tenor (the weakest your choir) next to the congregation, of placing him at the inside extreme the rear seat.

Can you suggest means of stimulat- nular attendance in a volunteer choir? tried several plans, such as having ata or oratorio every six weeks, hav- rties, and plenty of new music. Are other ways, and which do you consider t? I want to try them all.

Handling a volunteer choir these days difficult problem, and one that should imposed on a choirmaster unless it lutely necessary and an abundance of material available. What you have tried should bring results if the rs of the choir are interested. The n of the matter is to be able to make eel that it is a privilege for them to uded in the membership of the organ- Perhaps, if you could have some feature as part of each rehearsal it help in awakening interest. Why not call a meeting of the choir, and to insure a good attendance have some unusual attraction, perhaps a choir dinner (at the expense of the church), and on this occasion have your minister make a strong address appealing for help in making the music of the church a valuable feature and outlining the plans in mind to interest the choir members? Let him emphasize the value of the training they will receive and the privilege they enjoy in being included in the membership of such an organization. Prizes might be offered for regular attendance, musical progress, and so forth. In the church where the writer is engaged prizes were provided for by a very good friend of his who happened to be in the choir room one day at rehearsal. In his church, also, although the members of the choir (consisting of boys and men) are all paid, there are additional attractions for the boys such as gymnasium with attendant, an occasional visit to the Y. M. C. A. for a swim or other sport (one of the men of the choir is officially connected with the Y. M. C. A.), a day at the circus, and a week or so at a summer camp, expenses for which are met by a special concert. Of course some money is required for these features which the church should endeavor to supply, especially if the members of the choir volunteer their services.

The problem of the volunteer choir is indeed a difficult one, and the church should lighten the choirmaster's burden by giving all the help possible.

The writer thanks you for your appreciation of the column and hopes to see you in Philadelphia on the occasion you mention.

Q. Will you please recommend a good school where one may study the pipe organ?

A. There are many Schools of Music which include a course in Organ-playing, as well as many private teachers of the organ. Among the schools we would suggest the following:

The Guilmant Organ School, William C. Carl, Director, 17 East Eleventh Street, New York, N. Y.

The Sherwood Music School, Fine Arts Building, 410 South Michigan Avenue, Chicago, Illinois.

Chicago Musical College, 60 East Van Buren Street, Chicago, Illinois.

New England Conservatory of Music, Boston, Massachusetts.

American Conservatory, Kimball Hall, Chicago, Illinois.

Oberlin Conservatory, Oberlin, Ohio.

Peabody Conservatory, Baltimore, Maryland.

If you are interested more particularly in Theatre Organ-playing, we will be pleased to suggest, in a future number of THE ETUDE, other schools that specialize in that branch.

Q. If an organist who plays for Sunday morning services, special events, such as Christmas and Lenten services, funerals, weddings, choir rehearsals, and rehearsals with soloists, receives a salary of three hundred dollars per year, and the minister's salary is a little over three thousand dollars, what should a choir director receive in payment for directing a volunteer choir which rehearses once a week but does not sing every Sunday morning? Which is considered more important, the work of an organist or that of a choir director, and which one, as a general rule, receives the largest salary? I read an article in THE ETUDE some time ago which stated that an organist should receive fifteen per cent. of the amount of salary that the pastor receives. According to that the organist should receive more. What is your idea in reference to this?

A. If an organist attends to all the duties you mention without any extra compensation, it would seem to the writer that the salary should be larger than that of the choirmaster who is present only at rehearsals once a week and not regularly on Sunday mornings. Not knowing the respective ability of the organist and of the choirmaster makes it necessary to answer the question in a general way—not necessarily applicable in all cases. The salary you mention for the organist is certainly very inadequate, and there should be extra remuneration for weddings and funerals. The work of organist and that of choirmaster are equally necessary and important whether combined in one individual or divided between two individuals. The choir director is usually responsible for the musical work of the choir and organist, and with an equal amount of service and ability would probably be entitled to receive the larger salary, though here again the question is answered in a general way. We do not know what per cent. of the pastor's salary is paid, as a general rule, to the organist. In some cases, when the position of organist and choirmaster is combined in one individual, the salary is probably as much as fifty per cent. of the pastor's salary. Fifteen per cent. is certainly not an overgenerous appropriation for an organist and choirmaster, although in some cases it is probably less than that.

A Book Every Piano Lover Will Appreciate

MODERN OPERA SELECTIONS THE WHOLE WORLD PLAYS

Modern Opera Selections fills a keenly felt want on the part of music lovers for a compilation of modern operatic music to take the place of individual foreign publications which are no longer available. Its more than thirty selections afford a comprehensive view of modern Russian, French and Italian opera. Each selection contains the opera's salient melodies, and the arrangements are sufficiently elastic in difficulty to meet the requirements of varying degrees of technical skill. Those who delve deeply into the pages of this book will develop an ever-growing admiration for the genius of the great modernists who have conceived these operas.

Letters from Etude Friends

The Duty of Students

E ETUDE:

e is one phase of music-study that ot receive the emphasis it should. ous articles are written setting forth of the teacher towards his pupils; much is said about the duty of the ward his teacher and towards him-

many pupils take the position of a sponge, and think they are doing uty if they absorb a portion of the ion supplied by their teacher. The nd of student, however, is the one the habit of asking questions on the he is supposed to have at heart. remember that your teacher—al-he may be a veritable encyclopedia ical knowledge—is not a thought and cannot always be relied on to ch parts of the subject present the difficulty to your understanding. eacher will be only too willing to to an "inquiring turn of mind," and e an added interest in the question-il. As an example, have you never your teacher when he has played r you a piece of music that you are g, "Yes, that sounds very nice, in-it when *I* play it ever so correctly n't sound so good as that." Well, a little further and ask him to ex-y is doesn't sound so well when you and, if you listen very carefuly to lanation, you will most likely begin b some *real* insight into music. In both you and your teacher will get your weak points; and the outcome e an increased effort at those points, of the extra knowledge of the sub-s obtained.—SAMUEL HOBSON.

Hearing With Eyes

ETUDE:

recent iden of quoting extracts from pieces has interested me very much. ill be a useful addition to the plan I ed for several years. I cut soiled sic into strips, separating at the end hrase. Where key and time signature appear on the strip I wrote them in er. These were put in a box and the pupils in turn took a strip, analyzed it aloud, played the phrase on the piano, copied it into their music blank books and tried to compose another phrase to match it. The difficulty was increased gradually in the harmony work.

I also wrote down phrases from the master-pieces, for sight reading work. For juveniles I just copied the melodies.

Besides seeing with the ears, it is important to hear with the eyes, as an aid to memory. Your printed phrases facilitate my plan.

R. I. C.

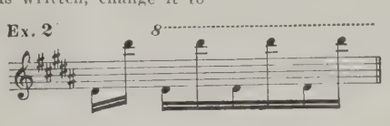
Liszt's La Campanella

TO THE ETUDE:

This brilliant composition of Franz Liszt baffles many advanced pianists; and yet even a fifth-grade pupil could play it if it were not for the double octave jumps throughout the composition.

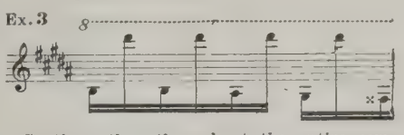
The first means of conquering these difficult jumps is to practice other pieces with the same difficulties, such as Czerny's Opus 740, Book I, Nos. 7 and 8, which will strengthen both the left and right hands in overlapping second-finger leaps. Also practice Schubert's "Faith in Spring," transcribed by Liszt, and William Vincent Wallace's *Second Grande Valse de Concert.*

Clementi's *Gradus ad Parnassum*, numbers 25 for the left hand and 27, 28, 24 for the right hand, will accomplish wonders if practiced correctly.



Another good way to practice these jumps is to take, for instance, the fourth measure in *La Campanella*, which is

Ex. 1



Now, instead of playing this measure as it is written, change it to

Ex. 2

Then practice the next measure like this:

Ex. 3

Continue thus throughout the entire composition, making a triple octave instead of double octave jumps. By this method you will be pleased to find how easily Liszt's original version can be played, after several days of study as directed. As Joseffy used to say, "To overcome a difficult passage, one must practice something more difficult."

FREDA HUNT.

ook is planned for the use and assist-clubs, schools, Teachers and Students. nical sketches of leading French com-or the stage are given. Following each is an outline of his most successful list of records illustrating the style of ion, and a short interpretative outline ork in general. A most useful booklet s purpose well.

on Music and Singing Towers of the d and the New. By William Gorham loth bound; 297 pages. Published by lead & Company, Inc., at $3.00.

is too often made subservient to man. s when "the mood is on him;" he buys to the concert if the artist appeals to y; when he is bored or indifferent he ay his instrument, leaves the concert-s the victrola run down, or pulls the m his radio apparatus. But here is n of art that is master! It compels e's attention; no alternative is given. villagers of Holland and Belgium to e to singing towers is like a bird re-ot air, a fish distasteful of water. To his music is to be a social, almost a outcast. Perforce the child, the he man listen, and through listening love it. Meanwhile, the bells ring nely, triumphantly, melodious.

Rice's volume is, in its way, as com-as the playing of the carillon. It does d with us to accept any statement; not asked to believe anything; we are told the story of these singing towers the peoples who live under their spell. put the book aside and forget it—if

King's Breakfast. By A. A. Milne. n boards; 17 pages; cleverly decorated . Shepard; music by H. Fraser-Simson. ed by E. P. Dutton & Company, at copy.

ave all heard of the near tragedy of ng's Breakfast," and why there was no for the royal slice of bread," but we have not yet gained an insight into how it is to be sung (standing on tip-toe) nor into the personal problems of the Queen (the purple dress *was* important) nor been told why the cow slept at breakfast-time. This book gives not only this information, and another poem, "Feed My Cow," but also sets both poems to music as delightful as the verses themselves. A book indispensable to children who like to sing—standing on tip-toe.

Haydn. By Miss Townsend. Cloth bound; 124 pages. Published by Sampson Low, Marston & Co., Ltd., at $1.25 a copy.

In these days of extremes, when a biography either lionizes or depreciates, it is refreshing to read a "life" that is a record of combined strength and weakness, serenity and complexity, exaltation and humanness. Haydn, the genius, is not made a victim of malice, poverty, or his own personality; nor is he made a possessor of unqualified fame, prosperity, and Olympic indifference. Instead, he is a man striving—not overmuch—but sturdily, with his fellowmen, toward achievement. There are lineaments in this plain portrait more touching than any that could have been painted with rumor for a brush and fancies for colors. Moreover, for the student, this authentic description of musical Europe in the latter part of the eighteenth century will prove enlightening.

First Aid to the Opera-Goer. By Mary Fitch Watkins. Cloth bound; 367 pages; illustrated. Published by Frederick A. Stokes Company, at $3.00.

Unlike the series of books that promises to tear us from our play and hold us to the chimney corner, this volume purposes to part us from our hearth-fire, giving us instead the glare of the footlights. The librettos of forty-two operas are considered and, thanks to the author's good sense, taken with whimsical forbearance and frank humor. Nor is the music enveloped in the dust of dramatic suspense. Under the sympathetic touch, artisans, courtiers, fairies, and farmers become an array of living people mingling in scarlets and blues and silvers before our fascinated eyes. When closing the book we wonder if it is too late this evening to go to the opera.

The KIMBALL Honored Through the Years

THE World's Columbian Exposition of 1893 marked a triumphant milestone in the progress of art and science. Here the Kimball was accorded the award for "Superlative merit" and "Highest standard of excellence in all branches of their manufacture."

Honored again in 1898 at the Trans-Mississippi Exposition by the only gold medal awarded any piano, the Kimball continued to gain the approval of the most critical juries of award. The Alaska-Yukon-Pacific Exposition in 1909 conferred "Highest Award." Another milestone in our country's progress was the completion of the Panama Canal, which was celebrated in 1915 by the Panama Pacific Exposition, and here the Kimball was given "unprecedented recognition": Grand Prize, Medals of Honor and Gold Medals.

In accord with these tributes to the Kimball has been the substantial recognition from the hundreds of thousands of homes in all parts of our country in which the Kimball, both grand and upright, has proved pre-eminently satisfactory.

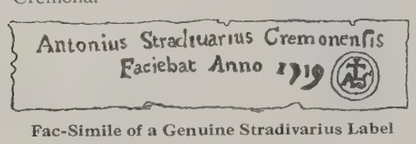
ANTONIUS STRADIVARIUS CREMONENSIS
Faciebat Anno 1716
Made in Germany



Now in this case the label is a correctly worded Stradivarius label, but the last line "Made in Germany" gives it away, and stamps the violin as an imitation, for Stradivarius made his violins in Cremona, Italy, and not in Germany. It has been a custom in Germany, for many years, for manufacturers to put the phrase, "Made in Germany," on all kind of articles, especially those intended for export.

Thus we find many violins with correctly worded labels of the names of the great makers, and the places where the violins were made, but followed by the trade marks, "Made in Germany," "Made in France," "Made in Italy," "Made in Japan," and so on. Such violins are all imitations, for none of the great makers used the phrase, "Made in . . . ." They invariably used written or printed labels with their names, the name of the places where the violins were made, the date when they were made, and sometimes an emblem, such as "I. H. S." (Jesus Savior of Men).

Then there are the trade marks, branded on the violin, usually on the shoulder or the back of the scroll. The names of these trade marks are legion. Thus we have "Conservatory," "Ole Bull," "Strad," or "Stradivarius," "Amati," "Stainer," "Guarnerius," "Sarasate," "Paganini," "Cremona," "Paris," and so on. Violins branded in this manner are invariably factory fiddles of doubtful value. The great historical makers, and also the best modern makers, did not brand their violins in this manner. Makers of good reputation have always used labels pasted in the violin, and not branded on the outside.

Violins With Labels

Then there are the violins which contain labels which distinctly state that the violin is an imitation and not an original. Such a label would read, "Copy of Guarnerius," or in French "Modelé d' apres Amati" (modeled after an Amati) or "Copie de Stradivarius" (Copy of Stradivarius). In German a label reading "Nach Maggini," would mean "Made after the style of Maggini." Where the words indicating that the violin is only a copy are in a foreign language, people who do not understand the language think these words are part of the original label and that the violin is genuine. Labels written in the more unusual languages, such as Hungarian, Polish or Russian, are very mystifying to the average violin owner. Even when the label says in plain English, "Copy of," many people fail to understand its significance. The name of a great maker, "Stradivarius," "Guarnerius," or "Amati" catches their eye, and they jump to the conclusion that they have a real Cremona.

Fac-Simile of a Genuine Stradivarius Label

In many instances the cheaper grades of factory fiddles have labels incorrectly worded, or printed in ordinary modern type, instead of being exact duplicates of the originals. Sometimes the dates on the labels are incorrect. Thus we may find a Stradivarius label with the date of 1747. Now, as Stradivarius died in 1737, he could not very well have made the violin in 1747, ten years after his death, unless he made it in the spirit world and sent it back to earth. Also the spelling of names and places on the labels is often incorrect.

Real experts pay little attention to labels as a means of judging whether a violin is genuine or not, since labels can be removed from violins without much difficulty, and because any kind of a label can be pasted in any kind of a violin. Thus a genuine label might be found in an imitation violin, or an imitation label in a genuine violin. Labels of all the great violin makers can be readily obtained at a moderate cost. Some of these labels are very crude affairs, roughly printed, to be sold to manufacturers of very cheap grades of violins, while others are skilfully executed counterfeits.

Next we come to violins which are "doctored," to give the appearance of age and wear. Eminent violin makers who have made a specialty of imitating the work of the old masters usually content themselves with duplicating, as far as possible, the model, characteristics, varnish, and graduation of the works they copy and do not "fake" the marks of age; but a great number of factory fiddles made to sell at medium and low prices, are purposely doctored to appear old.

Made "Antiques"

We have all heard of the fellow who made "antique" (?) furniture, who was found in his workshop by an acquaintance, shooting tiny bird shot into an old mahogany bed-stead to give the appearance of worm holes. We have something similar in the doctoring of violins. By special tools made for the purpose, little grooves and scratches and imitation cracks are made on the backs and bellies of the violins, which, when varnished over, give the appearance of having been made many years ago. There is a little tool also which makes imitation chip marks in the varnish to imitate checks and chips in very old violins which have been subjected to hard usuage. In extreme cases I have known of real cracks being made and then carefully repaired. The back of the scroll is often shaved off slightly to give the appearance of wear which comes from the violin lying in its case or being hung up against the wall. Sometimes, where there is a deliberate intention to deceive the purchaser, the inside of the violin is rubbed with dust to give it an old appearance. The makers of the cheaper grades of factory fiddles simply counterfeit the appearances of age to give the violin a more artistic appearance, never thinking that anyone will be fooled by such easily detected marks of age. Any intelligent violin student can soon learn to distinguish such artificial signs of age from the genuine.

Fac-Simile of a Genuine Guarnerius Label

The Violinist's Etude

Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

Is It Genuine?

Part II

(Continued from last month)

Hints on Repairing

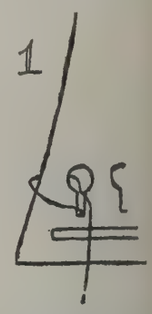
Part I

By Otto Rindlisbacher

THE slightest defect in the construction of the violin is, due to the sensitiveness of the instrument, many times amplified through its tone. Obviously the violin must be kept in constant repair and shou'd have an occasional examination for defects. To do this it is not necessary to remove the top or back or in other way dismember the instrument. Neither will there always be defects!

The object of this article is not to give a complete treatise on the art of violin making or repairing, but merely a number of helpful suggestions in regards to minor repairs with which every violinist is confronted, and which anyone can make without consulting a violin maker.

Stringing being one of the most frequent and one of the most important adjustments, it deserves first mention. Procure the best strings obtainable, preferably gut A, D, G and wire E. Under ordinary conditions the E steel is preferable to the gut; and most of our modern soloists are now using it, which should be sufficient proof of the argument. Sometimes the aluminum wound D is found very satisfactory. A medium of balance between the aluminum D and the steel E is still desired, in the form of some new A. The G is always covered.



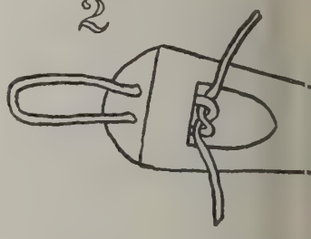
It is very necessary to have the strings of a corresponding gauge, for truth of fifths. A string gauge may be purchased at any music store. Just what style of strings and what gauge to use depends upon the instrument and the player and can be determined only by experimenting. Have the strings gauged by an expert and then remember the gauge for future reference.

When putting on a complete set of new strings the A should be attached first, as this string is the most difficult to fasten to the peg when other strings are in the way. Tie one single knot very near the end. Cut off any surplus; fasten to the tailpiece, get the desired length (to allow the string to wind three or four times around the peg) and cut with a sharp knife.

When strings are wound on the peg avoid the long tab end; and each succeeding coil must hold down this end two or three times so as to preclude any possibility of vibration. The hole in the peg should be in about the center of the peg box or toward the smaller end of the peg; and should it be too far to one side, drill a new one by removing the peg and using a small common drill. Wind each coil toward the side of the peg box from which the peg is turned. This has a tendency to draw the peg in and is the proper remedy for many slipping pegs.

If the string is too long, cut off the surplus. A faulty surplus end may manifest itself in several ways by buzzing, rattling or sympathetically vibrating.

For a steel E nothing is more con than the little metal "E string ac for the tailpiece, which may be pu for a small sum. A gut E shou one extra turn on the right edge tailpiece to take the strain off th and prevent breakage at that point



Giving a gut string an extra twis will prevent its unravelling, which times the cause of a rattle or de This, of course, does not apply wound string.

The life of a string varies, de upon the player, weather conditions of string and many other reasons. (differ in regard to when a string s changed. But it is not necessary card a string so long as it is n and still gives a good tone. Age, thing, should improve it, though i sible to overstretch it. Always extra set of strings in your case apply—strings which have some "stretch" taken out, and which wil stay at the right pitch.

The chief cause of slipping peg they are poorly fitted to the hol whittled with a jack-knife. Whe pegs, care must be taken to get t bevel so that the peg fits tight hole. Carefully use a file, then peg between sandpaper and give turns, occasionally trying the fi usually is sufficient.

It is not advisable for an am meddle with the peg holes; and they be uneven or too large, ha bushed by a reliable repair ma should be of ebony, preferably, other very hard wood. An occas plication of soap and chalk, mak turn easily and stick better. patent pegs are not recommended.

The tailpiece is fastened with the end-pin. The latter must fit t under no condition must it be g the violin. Slip the gut around pin and through the holes in the measure the right length, so that piece rests well back to the sadd single knot in the gut is usually when pulled tight. No other should be used.

If you find this difficult, wr around each end, cut ends close with a match or by pressing aga stove. A long end touching the cause a buzz.

If the tailpiece touches the top, out a small amount from the ta put on a higher saddle.

(To be continued)

"Violinists should consider it posed duty to bring forward so new things—otherwise how will ture be extended?"—*Francis Ma*

The Violinist's Opportunities

(Continued from page 267)

s would be the greatest cultural force nable for the United States. Besides ling the doctrine of good music to undred new cities and therefore to mense number of auditors, the young who performed would be given an unity to gain experience before ces and make a dignified though s small living, while they were ng their way forward toward the r concerts of the large cities, instead nting "movie" jobs in order to exist, herefore, giving up at once all hope cert work; for the many hours play- equired by most "movie" jobs pre- the idea of practicing enough to technic in shape for the exacting ds of concert work.

Competitive Examination

ere there were many applicants for me concert or position there could npetitive examinations at which the nts would play before an impartial, xpert jury. Teaching positions in tter schools could be also arranged central bureau. In short the bus- of the bureau would be, in the bus- rernacular, to create a market for nusic, to sell the good music and to the best musicians of the younger to furnish the music.

k how encouraging it would be for ner to be able to tell a graduating who played well, "We have arranged gagements for you at a certain fee, you will be able to make a living your concert work this year. Go home and practice so that you may do your best, for if you make good next year the bureau will be able to place you in the larger cities." Instead of this, alas, when the pupil asks, "What shall I do now?" the teacher can only say, "Hunt a job, or pay a manager a large sum to advertise you and try for engagements which you may or may not get."

In fact the competition for concert work is now so large that it is very difficult for a young artist, no matter how good, to get a big manager to book concerts for him. The manager naturally says, "Why should I work hard trying to book this unknown artist when there are enough internationally known artists competing for engagements to keep me busy?" It generally takes a very large fee to the manager to arouse any enthusiasm about an unknown artist.

The enlarging of the concert field and the arranging of means to take the worthy young artist and start him in his work of concert playing or teaching seems to me to be the most important need in American musical life to-day; and if this interview should in any way lead to progress in that direction, I will feel that I have started a movement of the greatest importance to American musical life.

America is capable of infinite musical expansion. It is the freshest and youngest of the nations. Europe is blasé and unchanging, like an old man, while America, like a youth of sixteen, looks not back to the past, but forward to the future.

No Two Violins Alike

people, who know little about violins 's, seem to go on the assumption that ns and bows made by the same maker dardized as to quality and value. For , people write to THE ETUDE, sending of the labels in their violins, or the amped on their bows, and ask us to n exactly what the violin or bow is They may ask about violins as if they king about popular brands of vacuum , watches, fountain pens or type-

is a vast difference, however. Even ase of comparatively new violins and modern makers, there is often a fference in the quality of a certain of violins and bows made to sell for e price. No two violins and bows tly alike, even if by the same maker of supposedly the same material. The a violin and the excellence of a bow on their being correctly made out of hich is exactly fitted for the purpose, no two leaves or blades of grass are tly alike, so no two pieces of wood tly alike in sonority, although in some e difference may be infinitesimal. The equation also operates, for the maker to do better work at some times than

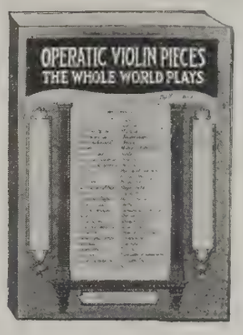
imes a maker gets hold of a lot of peculiar excellence, and in that case ns made out of that particular lot of ll be of super-quality. In the case Cremona violins we find instances e wood in the belly has been pieced, that the maker was running short on wood of such splendid tone quality, used it up to the last scrap.

his reason the purchaser makes a istake if he buys a violin or bow, n the strength of the maker's name, he would buy a watch or a clothes The instrument should be tested ly, no matter who made it. It is the wisdom to try out several violins or en although made by the same maker. d unevenness as to quality in the vio- bows made even by the Cremonese, r master workmen of the world, owing different periods of the maker's life e violins were made, the varying f wood, varnish, and other material d the fact that every workman at ceeds in doing his work better than s.

over a dealer's price list of violins Stradivarius, the world's premier aker, and of bows made by Tourte, of all bow makers. You will find e specimens are priced two, three or es as much as others. It is a ques- uality and good preservation, except ome instances violins or bows have an istorical value from having been some great violinist, by royalty, or e famous historical personage. A hich had been owned and used for years as a concert violin by Paganini, or Henri Wieniawski, would naturally command a higher price than if it had been the property of plain John Smith.

A year or so ago I saw in Chicago a splendid Stradivarius violin which was known as the Duke of Edinburgh Strad. The Duke was the brother of the late King Edward of England. The Duke was an excellent violinist and had often used the violin for playing in private, and on public occasions of a charitable nature. He was so fond of violin playing that he was known in England as the "Royal Fiddler." The violin was offered at a very high price, and no doubt a considerable part of this price represented the added value accruing from its royal ownership, where the owner was at once a violinist and the brother of a King. Other things being equal, a violin with an interesting history is worth more than one without. Most of the great Cremona instruments have names, expressive of some particular characteristic of the violin, or its ownership. Thus we have the "Dolphin Strad," the "Messiah Strad," the "Duke of Edinburgh Strad," the "King Joseph" Guarnerius, and so on.

The question of preservation plays a great part in the value of violins and bows. Collectors of rare coins and stamps pay much higher prices for specimens which are perfect and which look as if they were just freshly issued. There are specimens of Stradivarius, Guarnerius and other Cremona violins in existence at the present day, which seem to have escaped the ravages of time and which look as if they had been made two years ago, instead of two centuries. Such specimens are, of course, worth much more than if they showed signs of wear and abuse.



There is a popular impression among some people who know little about violin values, that the older and more dilapidated a violin looks, the more valuable it must be. They think that cracks, scratches, spots where the varnish has been worn off, and chipped edges, add to the value of the violin. Never was a greater mistake. Good preservation adds largely to the value of any violin, new or old. For this reason a violin should have the best of care. It should be kept in the case at all times when not in use, in a place which is not too warm or cold, and above all not damp. Rosin should not be allowed to accumulate under the bridge, and the utmost care should be used to guard the violin from accidents. Young violinists are continually leaving their violins lying around on chairs, and then seem to be surprised when the first person who comes along sits down on them, and makes a wreck of them.

A violin, seemingly one of the most fragile of all human contrivances, is really one of the most durable; for with a few minor repairs occasionally—a new fingerboard, pegs, or nut—it is good for a couple of centuries of use at least.

NINI is the turning point of vir- —SCHUMANN.

"Too many of the technicians of the present day no longer sing."—YSAYE.

D. Appleton & Company Present an Entirely New and Remarkable Collection for Violin Entitled

OPERATIC VIOLIN PIECES THE WHOLE WORLD PLAYS

"Operatic Violin Pieces The Whole World Plays" differs in design, character and scope from any collection along similar lines ever published. It not only presents a comprehensive survey of the entire romantic and modern opera field, including the fifty-three finest productions of the Italian, Russian, Bohemian, French, German and English schools, but the form in which the music excerpts are arranged also differs entirely from the usual old-fashioned "selections," and still more antique "potpourris." Really vital melodies alone are featured—in many instances a single aria or dance movement has been sufficient. The arrangements vary sufficiently in technical difficulty to make the work interesting and useful to players of all degrees of proficiency, and the violinist who plays it over from cover to cover will have learned fully the true appreciation of "mood" in opera.

INFORMATION AND BOOKLET UPON REQUEST

Crane Normal Institute of Music

Training School for Supervisors of Music

BOTH SEXES

Voice culture, sight-singing, ear-training, harmony form, music-history, chorus-conducting, methods, practice-teaching. Graduates hold important positions in colleges, city and normal schools.

53 MAIN ST. POTSDAM, NEW YORK

THE ETUDE conducts a "Special Notice" Department to aid its friends and readers to reach the ETUDE audience of 215,000 when they desire to secure a musical position, offer a musical position, or when they seek to sell or secure something musical. Nothing in the nature of a business venture is entitled to the very low word rate charged on Special Notices.

See Page 322 this issue.

The Courtright System of Musical Kindergarten

Oldest and most practical system A great opportunity for teachers to specialize in this unlimited field. Write for particulars in correspondence course.

Mrs. Lillian Courtright Card, 116 Edna Ave., Bridgeport, Conn.

A generation ago the earnest American student of music found it necessary to cross the ocean to secure master instruction. Now the many excellent music study advantages offered by schools and colleges throughout the country that one need not travel more than a few get the best instruction. Note the SUMMER CLASSES announced in this issue.

Violin Questions Answered

By MR. BRAINE

i Violin.
R. L.—If genuine, your Amati violin be worth several thousand dollars; but are thousands of imitations, so the s of yours being a real one are very ndeed. Send your violin to a dealer in olins for examination.

nius Stradivarius.
H. S.—No, Antonius Stradivarius was mous as a maker of violin cases and His fame rests on his violins, which e best in the world. A Stradivarius is worth what it will bring. I have of sales within the past few years at $10,000 to $40,000, and it is said that k's Strad. is valued in London at $125,- There is no way of getting at the real in regard to these figures.

n "Schools."
.—Some teachers prefer one and some her. Personally, I prefer the *Hermann School II*. 2—About the same. 3—In g the firm staccato, the upper part of w is best; but virtuoso performers must epared to play it in any portion of the oth up and down. I have seen violinists ere able to play a dazzling down-bow to commencing at the frog. 4—In flying to the hair bounds from the string y at each stroke, but in firm staccato s not.

nning Late.
3. W.—Twenty-seven is too late to start olin with the hope of becoming an artis- ayer; but at that age you can no doubt enough to afford considerable pleasure rself and others. 2—As you will be able ure a teacher by September, I would you to put off your start until then, as ill avoid many faults which you would ably acquire if you made the start with- teacher.

ng a Violin.
D.—It would be impossible for me to u the value of your violin without see- The label pasted inside the violin does its value by any means; in fact, it has o do with it, in many cases. You have violin makers and repairers and good sts in Rochester. Take your violin to l of these and they can fix the value.

aising a Violin.
H.—If your violin with the Stradivarius were genuine it would be worth a very sum. Unfortunately there is not more ne chance in a million that it is genu- Imitation Strads are worth $1 up, ac- g to quality and how well they are made. of the imitations are worth hundreds of , if made by excellent violin makers. can tell what your violin is worth with- eing it. Your only course is to send it ood violin dealer for valuation.

ming Practice.
M. C.—Having studied the violin up to ncluding Kreutzer, you have a good of getting your technic back, even al- you gave up the study of the violin e years. I should certainly not advise study jazz, unless you are absolutely led to do so to make a livelihood. you already have a considerable founda- violin playing, or you could not for- have played Kreutzer, I should think ld be inadvisable to take up the study other instrument. Your best course be to resume your violin practice, using of moderate difficulty at first. In time ould no doubt get back your former pro- y.

enth Notes.
I.—In playing the sixteenth notes in the e you send, the tip of the little finger lie lightly on the stick of the bow; or bowing, when played in the middle of w, it would not make a great difference little finger were held off the stick. In g such a passage at the frog, however, tle finger would have to be held on the so as to balance the bow. 2—There are nt methods of memorizing. Some seek ke a mental photograph of the printed so that in playing they seem to be look- the printed page; others memorize a sition by playing it over and over until an remember it by sound. 3—Leading teachers usually give their pupils com- ons in miscellaneous order, as regards t and modern schools, so that the educa- ill not be one-sided, as it might be if pil were kept too long on music of a school.

ion of Thumb.
.—As far as I can learn from your de- on of the position of the thumb when g in the third position, your present r is correct.

ini.
fcD.—Giovanni Paolo Maggini, Brescia, 640, famous violin maker, was the best of Gasparo da Salo. Many of his violins double purfling. The tone is broad, dark elancholic. There are very few speci- of Maggini's work in existence, and an se number of imitations. Your 'cello is ly an imitation, and the only way I by which you can find out certainly er it is genuine or not would be to sub- to an expert for examination.

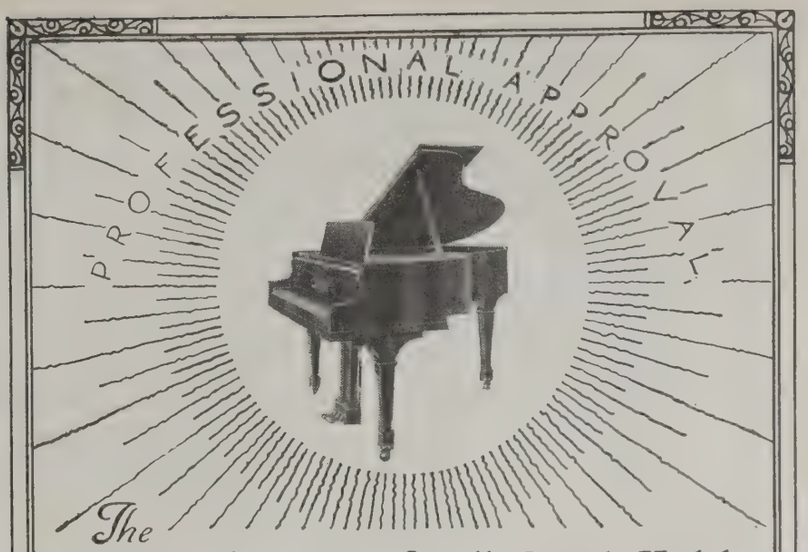
Harp in "Strad."
R. V. P.—As your violin with the Stradivarius label is trade-marked with a harp, it is quite certain that it is an imitation, as Stradivarius did not use trade-marks on his violins. Its value depends on how good an imitation it is, and how well it is made. No one can set a value on it without seeing it, so you will have to send it to a violin dealer for valuation.

Stradivarius Label.
E. D.—Unfortunately it is quite impossible to set a value on a violin without seeing it. Your violin has a Stradivarius label in it, but that means nothing, as you will find the same label in millions of violins, imitation and genuine, and worth from $1 up to $25,000. You could ship your violin to an expert violin dealer in one of the large cities for valuation, but the chances are you would go to useless trouble and expense in so doing.

Imitation Stradivarius.
J. D. H.—There is perhaps one chance in a million—not more—that your violin is a real Stradivarius. You will have to have it examined by an expert.

School and Practice.
F. R. A.—If your school duties do not take up too much of your time, and you can get an hour and a half or two hours daily for practice on the violin, you can make fair progress. You can advance quite a bit with even one hour practice a day if you have a good teacher, and practice earnestly and with great concentration. Violin students preparing for the profession practice from three to six hours a day, some of them longer. 2—I cannot say whether or not your fingers are too short for violin playing without seeing them. You do not give your age, either, which has a great deal to do with the matter. Some of the great violinists have had hands of only moderate size for it is flexibility and stretching capacity which count. Eminent violinists occasionally visit the Philippines. Go to see one of them and ask his opinion as to the size of your fingers and hands.

Selecting a Bow.
J. A. M.—All the bow makers you name have made good bows. The main point is to get a good specimen of the maker's workmanship. Out of a dozen bows, supposedly of the same quality, and made by the same man, some will be better than others. Even in the case of Tourte, the greatest of all bow makers, you will find a variation of quality, and you will find, on examination of a dealer's price list of Tourte bows, some will be priced two or three times as high as others. Your best course is to have a number of bows sent to you on selection and pick out the one you like best.



Carlo Tononi.
W. H.—Carlo Tononi, one of a famous family of violin makers, Bologna (a city in Italy), was a maker of considerable eminence, and his violins are valuable. His models are large and well proportioned, his varnish rich and lustrous, and the tone of his violins is sympathetic and of good quality. His work has been copied a good deal, so you had better have your violin examined by an expert to see if it is genuine.

Left-Handed Violinist.
B. W.—In a late catalog of a leading American violin dealer, a Sanctus Seraphin violin is listed at $6,500. This maker was an Italian who worked in Venice. Are you sure yours is a genuine instrument? There are thousands of imitations. 2—As far as I can judge from the drawing of a violin you send, it would be entirely practical for a pupil to use it, provided the violin is normal in its measurements, and not too large or small for the reach of his arm, length of fingers, and so forth. 3—The age of eight is none too early for a start in violin study. As the pupil is left-handed, you could either have him try to finger with the left hand, or else have his violin changed, so that the string read G, D, A, E, from right to left, instead of vice versa. When this is done the relative positions of sound-post and bass-bar have to be changed also. Pupils who start very young are often able to overcome their left-handedness, as far as violin playing is concerned, and play in the normal manner, bowing with the right hand. You might try this first. 4—Your idea of having a prospective ten-year-old 'cello pupil study one year on the piano first is not a bad one. He will get a fundamental idea of music which will assist him with his 'cello studies later.

Appraising Violins.
R. D.—Write to one of the dealers in old violins who advertise in THE ETUDE, and arrange with them for an appraisal of your violin. You would have to ship them the violin as no one can give you an idea of the value on the strength of the label alone.

Violin Studies.
Sr. M. D.—If your pupil has not yet had the Kayser *Studies*, Op. 20, Books II and III, they would, no doubt, prove very helpful, also Mazas *Thirty Special Studies* for the Violin, Op. 36, Book 1. There is also much good material for shifting and double stops in Schradiecks' *Scale Studies*.

Hopf Violins.
A. B. S.—An article of some length on the Hopf violins appeared in THE ETUDE, for August, 1922, page 565. You can get this number by remitting 25 cents to the publisher.

The
Premier Aristocrat Small Grand Model
5 feet, 3 inches long. Price, $725. f. o. b. New York

THIS attractive small grand has proved its musical value from coast to coast.

Its moderate price is possible only because of large production and the specialization and concentrated manufacturing behind it.

Every student, teacher, studio, conservatory and college who has selected the Premier, is enthusiastic about its mellow, exquisite tone and easy, sensitive action.

See and ***hear*** the Premier at your Dealer. If you cannot obtain locally, let us know.

Send for "The Magic of Music" and paper pattern, showing floor space requirements.

PREMIER GRAND PIANO CORPORATION

America's Foremost Makers of Baby Grands Exclusively

Interesting Study Materials

Piano Teachers are Offered the Privilege of Examining Any of These Publications

The task of securing the best possible teaching material is not a difficult one for the teacher utilizing the advantages of the Presser Co. "On Sale" Plan. This plan is a convenience and economy, giving music teachers liberal examination privileges. Thousands of Teachers have found the Presser Co. "On Sale" Plan and other features of Presser's Mail Order Service to be of great value to them in securing anything in music publications. (Details of the "On Sale" Plan Cheerfully Sent on Request.)

Successful Teachers Use Works Such as These For Building Up Technical Weaknesses of Some Pupils

FIRST GRADE SERIES

By L. A. Bugbee Catalog No. 7718 Price, $1.00

An unusually popular and interesting set of first studies for young pupils. A number of these studies have accompanying text and in general these studies are so nearly like little pieces that the pupils "take" to practicing them. A set of studies such as these can be used to good advantage in conjunction with any elementary instructor.

THE MUSIC SCRAP BOOK

A Kindergarten Method for Piano Beginners

By N. Louise Wright Price, 60 cents

A first instructor that brings the young student up to the playing of delightful little pieces in which the young performer will feel a pride of accomplishment. Both clefs are taught.

GENERAL STUDY BOOK

By Mathilde Bilbro Price, 75 cents

The useful is mingled with the entertaining in this work. There are studies interspersed with short pieces containing words and they are strictly first grade. Throughout this is a charming set of easy piano studies.

THE PIANO BEGINNER

By Louis G. Heinze Catalog No. 9651 Price, 80 cents

A compilation of exercises in progressive order and intended for the beginner who has mastered the rudiments of music. These easy studies have been selected chiefly from the works of standard masters.

TEN BUSY FINGERS

Nine Melodious Studies With Characteristic Verses

By Mabel Madison Watson Price, 75 cents

Little playing pieces introducing a variety of technical problems in their very easiest form. They combine melodic, rhythmic and dramatic interest with finger training. There is a place for material such as this to bridge between those charming little beginner's books so often used and the possibly less attractive but necessary studies in the more advanced first and easier second grades.

SECOND GRADE BOOK OF MELODIC STUDIES

By L. A. Bugbee Catalog No. 13041 Price, $1.00

A teacher can find use for these studies with almost any second grade pupil. Pupils welcome a change from the best of instruction books and these attractive study pieces serve that purpose. The success of this set of studies has been phenomenal.

ETUDES FACILES

By Albert Franz Catalog No. 17671 Price, $1.00

These studies start in the second grade and progress into the third grade. They are melodious and of great technical value. They really give new, fresh material to take the place of such a set of studies as Streabbog Op. 63.

TWENTY-FIVE MELODIES FOR EYE, EAR AND HAND TRAINING

By Mathilde Bilbro Price, 75 cents

These may be regarded as second grade studies. They are intended to establish the position of the hand upon the keyboard, attaining freedom, training the eye, especially in the leger-lines, in staff positions and cultivating a musical ear.

PIECES FOR THE DEVELOPMENT OF TECHNIC

For the Equal Training of the Fingers

By N. Louise Wright Price, 60 cents

Studies running from grade two to grade three, that logically cover the training of each hand to equal facility in such phrases of technic as Relaxation in Chords, the Trill with the Turn, Broken Chords, Double Thirds, the Scale and Arpeggios.

RECREATIVE ETUDES

For Equalizing Both Hands

By R. S. Morrison Price, 70 cents

Excellent to introduce to pupils in the early third grade. They tend to develop independence of the hands. With their melodies and attractive qualities, these study pieces encourage profitable practice.

TIME STUDIES

By Sidney Steinheimer Catalog No. 13356 Price, 80 cents

Very useful studies in which all sorts of time and rhythm problems, such as triplets, syncopation, two against three, dotted notes, etc., are presented. Grade two.

INTRODUCTORY LESSONS ON THE ART OF POLYPHONIC PIANO PLAYING

By Theodore Presser Price, 75 cents

A definite course on polyphonic or part-playing commencing from the very beginning. There is no better mental drill than that offered by such studies as these. They may be given to a pupil well along in the second grade and will serve to correct many of the faults that cause a lack of charm to the student that has been drilled on only studies of a mechanical nature.

RHYTHM AND TECHNIC

By M. Greenwald Catalog No. 13932 Price, $1.25

Early grade studies of a melodious nature designed for special purposes. Each is devoted to some special feature such as double notes, wrist work, repeated notes, velocity, staccato, embellishments, etc. Grades 2-3.

ALBUM OF TRILLS

Price, 75 cents

Each of the eighteen pieces in this album contain some form of the trill and the use of this volume with medium grade pupils will be found by teachers to be the most desirable means of perfecting their ability to handle this valuable technical device.

ALBUM OF ARPEGGIOS

Price, 75 cents

Twenty attractive, medium-grade pieces, every one presenting Arpeggios in some form, giving the best medium by which facility and security in arpeggio playing can be obtained. One of the volumes in the successful series of *Albums of Study Pieces for Special Purposes.*

ALBUM OF SCALES

Price, 75 cents

The fact that the pupil comes upon the scales in various rhythms and in connection with interesting harmonies makes study more appealing than otherwise. Some of these pieces are but grade two, while none go much beyond the early third grade.

Any of the Study Material On This Page May be Successfully Used in Conjunction With These Successful Teaching Courses

BEGINNER'S BOOK

SCHOOL OF THE PIANOFORTE, VOL. 1

By Theodore Presser Price, $1.00

A truly **Beginner's Book** in every sense. Teachers have achieved speedy results with even the youngest beginners through using this elementary method. This is the first volume of a most successful **School for the Pianoforte.** The second volume, STUDENT'S BOOK, is equally popular and in response to numerous demands a third volume which gives promise of enjoying the same success was produced. The third volume is entitled THE PLAYER'S BOOK.

STANDARD GRADED COURSE

OF STUDIES FOR THE PIANOFORTE

By W. S. B. Mathews

In Ten Volumes Ten Grades Price, $1.00 Each

The greatest educational work of the age. A complete course from the very beginning to the highest degree of virtuosity. This original graded course gives standard material for study purposes selected from the best composers. This course has been the "main trunk of the tree" in the music study of hundreds of thousands of pupils.

FIRST STUDIES IN OCTAVE PLAYING

By Theodore Presser Catalog No. 14590 Price, 80 cent

Studies that pupils in the second and third grade ma take up. This work was carefully prepared and the resu is an unusually fine teaching offering for the first octave pla ing at the keyboard.

SIX STUDY PIECES FOR THE DEVEL OPMENT OF THE WRIST

By Carl Moter Price, 80 cents

These six study pieces will benefit the well progresse second-year pupil who uses them in daily practice for a perio They strengthen the wrist and form an excellent preparatic for *Bravura* study and also for expression.

SIX STUDY PIECES IN THIRDS

By Carl Moter Price, 60 cents

These six study pieces should be practiced over and ov again in order that the pupil may become accustomed to a sorts of groupings and fingerings in which thirds are utilize

EXERCISES IN DEVELOPING ACCURACY

By Gustav L. Becker Catalog No. 12952 Price, 80 cen

There are few who do not need studies of this characte Many teachers even would find these studies a great he to their technic. They are thoroughly practical and whi some of the studies might be graded as intermediate, othe run up to the seventh grade.

THE NEW GRADUS AD PARNASSU

By Isador Philipp In Eight Books Price, $1.00 Eac

An academic course of selected studies. The entire offe ing of educational piano literature was ransacked in ord to select the best possible material for each phase of techi treated. The studies in each part are arranged in logical a progressive order covering grades about four to six.

The Art of Listening

By Hope Stoddar

musician's main purpose, that of many sounds into one pleasing , is apt to be frustrated in the en- to respond to visual, tactual or stimuli.

is a fascination, for instance, in arance of the music on the printed the whole notes and half notes, escendo marks, and the staves. But arks are of no importance whatever n leading the student to correct the The reaction on seeing them should y automatic. There should be no travelling of the eye from note to a rapid and accurate impression as along the staves, and an immediate sion of the signs into proper tones. actual or "touch" sense, the im- on the mind of cool or warm, r dry, high or low, soft or hard, be thrust immediately into the ound. Mere muscular play should ded and all sensations of finger ist bent wholly on service to the

all, the "thought" sense, the at- remember directions or form ideas cal ordering of words should never ed to interrupt the student's listen- ers. Such a train of thought as, "This finger should go here; it must bend more; this one is a little too stiff; my hand must not be heavy," is sure to retard progress. Brief "mental flashes" only, such as "finger there," "thumb under," "flexible," or "too fast," should be the guides and even in these there should be no attempt to visualize, hear or dwell on the sense of the words.

In spite of the seeming difficulty, there is a singularly easy way to make these senses fall into motions of obedience. If the whole attention be given to listening, there will be no energy left for word, sight or touch. To grasp the sounds actually as they are impressed on the ear drum; to make the most of every tone; to be "all ears" for the time being; this is the secret of musical art.

Waking up in the dead of night we sometimes hear a train whistle far away. How poignant, how haunting the sound is! Yet this sound has not half the musical value of a single tone on the piano. Why, then, the effectiveness? It is because our eyes are closed, our hands idle, our minds wholly passive. Music should be heard like that; each tone a unity, a possibility, while it is played, of becoming as beautiful as the singing of angels.

Hints About Teaching Technic

By Viva Harrison

able to know a normal hand, in correct any peculiarity.
npart helpful suggestions by com- to overcome weak points.
nstruct each pupil according to its ucation and character, supplying al needs.
rotect the pupils from incorrect actice, as it leads to the wrong the muscles.

V. Encourage asking questions, when points are not clear, as teacher and pupil should co-operate in their work.

VI. Thought and concentration train the muscles and fingers to be independent.

VII. Always center the mind upon one part, where the difficulty arises, ever thinking that the brain does not send out two thoughts at once.

An Egg-Timer as a Practice Incentive

By Emil A. Bertl

E are pupils who practice because e music; there are those who prac- cause their parents hold the rod m; and there are those who simply practice, because they are too play- don't find enough amusement in at the piano.
ast two are the ones with whom e scheme may be worked.
s of all descriptions, with a fair of the competitive spirit in them, o all youngsters.
g-timer (3 minute copy of the hour which can be procured in any of and ten cent stores, is used.
upil is told not to watch the clock and asked to compete instead, with the sand that runs from one end of the glass to the other when turned down-side up.

Ask her to see how many times she can play a scale or exercise in the time it takes the sand to travel from one end to the other. The results that may be obtained with some very dull and discouraging types of children are surprising.

This is best used for scales and small finger exercises, which the youngsters as a rule neglect to practice.

For compositions it may be used as a timer for one performance, as quite a bit of music can be played in the short space of three minutes.

Musical Smiles

NUFACTURER of motor car accessor- engaging a factory superintendent. e's just one thing more," he said pplicant, who appeared to be satis- "Could you run a house organ in on with your other work?"
se organ?" said the man, with a expression. "What's the need of a factory?"

E BEGINNING OF THE TROUBLE in Literature Class (describing f Greek tragedies): "Two people sing to each other, and that's the gedies began."

Allegro—Do you think that Wagner early in his youth was under the influence of Meyerbeer?

Presto—I didn't know he drank the stuff.

"You have left the name of the author off the program," the stage manager ventured to suggest.

"What's the author's name?" asked the manager with the thick moustache and double chin.

"William Shakespeare."

"Friend of yours, eh? All right, give him all the credit there is. Put down on your program, 'Words and music by William Shakespeare.'"—*Washington Star.*

Many a fine performance has almost met disaster because of wet, slippery hands. A quick application of Odorono before playing corrects this condition

Don't suffer with perspiring hands!

Keep them dry and flexible with Odorono
Send for sample

Those who play know the extreme discomfort, even the danger of wet, slippery hands. Perspiration of the palms and fingers impedes movement and so endangers ease and accuracy of playing.

This condition of excessive perspiration is often caused by nervous strain. It is a condition which medical authorities say can be corrected easily and harmlessly by local application.

It was to relieve this very annoyance that a physician formulated Odorono, the original perspiration corrective. It is a clear, clean antiseptic liquid which, used only twice a week, will keep the hands, underarms or any other small area completely dry and free from all distressing moisture.

You do not need to suffer the distress of excessive perspiration. Simply apply Odorono to the hands several hours before playing. Use regularly three times a week and enjoy hands perfectly dry and free from hampering moisture.

A corrective for BOTH *moisture and odor*

Odorono is now used by millions as their one perfect precaution against the disagreeable odor of perspiration, as well as its excessive moisture. For they have learned that underarm odor is a danger into which one may fall unconsciously—in spite of careful soap and water cleanliness.

One application of Odorono will give you complete relief from *all* perspiration annoyance for at least three days. It keeps your clothing fresh and unstained, and safeguards your personal daintiness from any taint of odor. And if you would enjoy dry, comfortable hands when you play—just one simple little application of Odorono to the palms and underarms! At all toilet counters, 35c, 60c and $1.

Send for trial bottle —only five cents

THE ODORONO COMPANY
424 Blair Avenue
Cincinnati, Ohio

Please send me sample bottle of Odorono with your booklet, for which I enclose 5c.

Comparing Pictures and Music

By Mary M. Pleasants

PICTURES and music have seven qualities in common. These are: Perspective, Proportion, Angles, Lines, Curves, Shadings, and Coloring.

Perspective, the first requisite of a painting, may be compared to the tempo or speed at which a piece of music is performed.

Proportion in a picture may be likened to the time in music. "Time is the division of music into regular measures as related to the whole note, which is considered as the standard of measure."

Angles, which are so necessary to the picture, suggest the various rhythms of a perfect piece. Rhythm results largely from the use of the different lengths of notes, their combinations being almost innumerable.

Lines, so essential to a painting, have a parallel in the chords and their arpeggios.

Curves, the life of a picture, have their likeness in the chromatic progressions of music, as well as in the urge of augmented and diminishes intervals and progressions.

Shadings, which give relief to a picture, may be rightly compared to the *crescendo* and *diminuendo* of music.

Right Coloring, the crowning attraction of a picture, finds its counterpart in music to be tone quality which is the secret of the great charm of so much music as it is heard.

With all these in common, we find the masterpiece in pigments or tones to be a blending of the best creative attributes of mind, soul and body.

How Much Talking

By S. E. Jennings

JUST how much of the music-lesson time should be given to talking, is a thing to be determined by judgment. The pupil who pays for a music lesson does not pay to hear the teacher's praises of himself or his method; his views upon religion, science or philosophy; nor should the time be taken up in abstract discussions upon music in general, such as the pupil could get for himself from books or articles in the musical magazines. Ordinarily speaking, the lesson period should be given to teaching the lesson, stopping to talk only when an explanation is necessary.

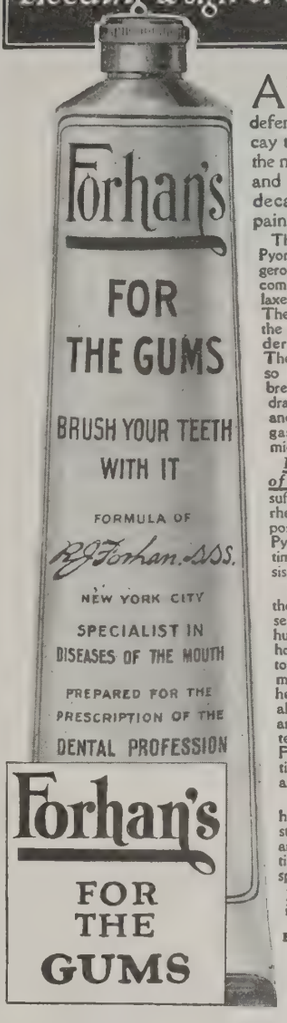
In the case of very young pupils, however, this rule should not be too rigidly followed, for often a few moments' pause in which the pupil is allowed to tell some little event in his life, some incident of his day, will break the dull monotony of the lesson and make the time pass with less of that fatigue which the child sometimes experiences at a lesson.

In the case of the very young child, especially where the parents are ignorant of music, it is well to take occasionally sufficient time for a little inspirational talk, for the teacher is often the only source of inspiration that some pupils have.

A short story of the achievements of some of the great musicians will be found time well spent. The writer recalls one occasion when the teacher, wishing to praise a little girl for the manner in which she had played a scale, said: "I would be willing to have Paderewski hear you play that scale."

It developed that the child, incredible as it may seem, had never heard of Paderewski. The time spent in explaining who he is, the position he holds in the musical world, the sums he receives for playing, could not be called time wasted; for, though the pupil must "do" and "keep on doing" to advance, the rewards of persistent effort must not be overlooked.

Learning a New Piano Piece



By Norman Lee

LEARNING a new piano piece is a problem. As in mathematics, some preliminary study is well worth while. A morceau may be likened to a quadratic, wherein the right hand is one of the simultaneous equations and the left the other. It is logical therefore, to "solve" each hand separately as far as possible—learn its intricate passages—before attempting to combine the two.

The key combinations on the piano are extremely numerous, but they are not infinite. In every piece certain figures will be found that are similar to some that have been encountered before. Study it out and try to remember where you have previously played that particular combination. If a figure repeats itself (1, 3, 4, 2—1, 3, 4, 2,) and then changes slightly (1, 2, 3, 4,) make a mental note of the change only:—"That is like what comes before; *now* for the change!" Frequently the same figure will occur removed a fifth. A piece is often constructed on a system of such repetitions with tonal differences which do not become apparent perhaps until it is well under way.

It is of the utmost importance to play slowly enough to get the piece right from the very beginning, in order that the subconscious mind, which ultimately takes care of technic, need not be re-educated out of a mistake. If a slip occurs with annoying frequency mark "nat" or "sharp" over the note in question so that it will be specially called to mind. Put the fingering in early. Finger similar passages as nearly alike as possible. Take yourself well in hand when a mistake occurs and say, "No, that is a *natural.*" Save your energy where you can, but stress the tricky parts.

Watch your gums—
bleeding a sign of trouble

Forhan's
FOR
THE
GUMS

AS sappers mine the enemy's defenses, so gum-decay tunnels through the normal gum line and produces tooth decay in its most painful form.

This gum decay or Pyorrhea is most dangerous. The gums become devitalized, relaxed. They recede. They shrink and age the mouth. Gum tenderness is present. The teeth loosen. Also Pyorrhea pockets breed bacteria which drain into the system and cause many organic diseases of mid-life.

Four people out of five over forty suffer from this Pyorrhea; but Forhan's positively prevents Pyorrhea if used in time and used consistently.

Forhan's hardens the gums. It conserves the gums that hug the teeth and hold them firm. It touches the fundamentals of tooth health in fact. And all this while you are cleansing your teeth scientifically. Forhan's is cool, antiseptic and pleasant to the taste.

If gum-shrinkage has already set in, start using Forhan's and consult a dentist immediately for special treatment.

Commencement Music

The Commencement without beautiful music and lovely flowers is almost as prosaic as a wedding without flowers or music. In practically all educational institutions music now is given a very prominent place in the Commencement program. There is something which only the tone art can bring to this unforgettable celebration of the beginning of a new day in the lives of young men and young women.

For years the Theodore Presser Company has made a specialty of providing its customers with the most attractive, the most inspiring and the most characteristic music suitable for Commencements. All that we need is to have you set down as definitely as possible what you feel that this important occasion demands in the way of music. Then let our experts give your letter their attention and we will submit at once, for you to examine, a list of the material which should be most suited to your needs.

Summer Classes in Harmony and Composition

The summer season is an excellent time for organizing classes in theory. Nowadays it is essential that every music student should have at least an elementary working knowledge of harmony. In the regular busy and crowded teaching season, especially with the private teacher, there is not always time to do thoroughly this very necessary theory work. In the summer, however, much may be accomplished. A class working twice a week during the summer should be able to accomplish all, or nearly all of the work contained in *Orem's Harmony Book for Beginners.* This would bring the class through the dominant seventh chord and prepare the members for more advanced work during the regular season.

Ambitious students who have attained a fair mastery of harmony are in most cases anxious to try their hands at some actual efforts in original composition. A most interesting class in composition might be made up of such advanced students and an ideal book to use would be *Orem's Theory and Composition of Music.*

In both the above cases the classes should continue through eight, ten or twelve weeks, preferably the latter. It is surprising what an amount of interest may be aroused in work of this character when taken up in a practical manner and with attractive text books.

Conduct a Class in Musical History

There are thousands and thousands of students who have a good working knowledge of musical history, who would be ignorant of it, had it not been for the smartness and activity and initiative of some teacher who decided in the past to conduct a summer class in musical history.

We have watched some of the teachers who have been doing this for some years and we have seen them rise in their profession. Why? Merely because they have the interest of their pupils genuinely at heart.

The Standard History of Music, with its 42 lessons, may be very delightfully and conveniently divided into five lesson sections, any section of which may be mastered readily in a week or less. This provides for eight lessons which would cover the entire summer. There is a special list of talking machine records issued for the use of this history by the Victor Talking Machine Company. By means of some of these records, the summer course in musical history may be made a most delightful session.

One thing about the history that is interesting is that it does not require any special previous knowledge on the part of the teacher. Any teacher anywhere may take up the work and add a very pleasant amount to the annual income by this means. The price of this history is $1.50.

With very young pupils, you may find it expedient to employ the much simpler *Young Folks' Picture History of Music,* Price, $1.00, in which the pictures are printed on separate sheets to be cut out and pasted in the book. This is the simplest of all music histories.

Brehm's First Steps for Young Piano Students

This is a little work of which we came into possession when we took over the catalog of Brehm Brothers. In response to various demands we are now about to print a new edition of this work, revised and somewhat enlarged. It is a very good little beginners' book, especially for those who still prefer to start out with the treble clef only for the first few pages. The material is tuneful and interesting and after a student has completed this book, one can go right into Grade One of the *Standard Graded Course.*

The special introductory price in advance of publication is 25 cents per copy, postpaid.

Album of Octave Playing

Octave technic is an important part of the pianist's equipment and the process of developing this in young students should begin as soon as the hands are able to span an octave. The early part of the third grade is none too soon. As with other studies many teachers find it advantageous to use for this purpose interestingly musical pieces containing parts in which these technical devices are introduced instead of the dry exercises in study books. It is much more pleasing to the pupil to practice a piece and, as a result, it is quite sure to induce more faithful practice. This will be the fourth volume in the series *Study Pieces for Special Purposes,* the first three devoted respectively to *Trills, Scales* and *Arpeggios* having already become established successes.

The advance of publication price is 30 cents, postpaid.

Twelve Melodious Studies In Scale and Chord Passages For the Pianoforte By C. W. Kern, Op. 560

The many admirers of Mr. Kern's delightful piano pieces will welcome the announcement that Mr. Kern has at last produced a set of studies. These studies display all the good qualities of this composer as exemplified in his various piano works. In point of difficulty they begin at about Grade 2 or 2½ and advance progressively into the early third Grade. While each study has real technical value, the studies as a whole are quite different from any other studies in similar style and grade, due to the fact that they are so very musical and characteristic. Each study has an appropriate title together with some brief explanatory text explaining the purpose for which it is to be used.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Two and Twenty Little Studies on Essential Points in First Grade Piano Teaching By Helen L. Cramm. Op. 38

Here is another one of Miss Cramm's splendid little books for young players. This is a book of studies of general nature which may be used to accompany or to follow any method or instruction book. It would be very good to use after *Presser's Beginner's Book.* The material is all original with Miss Cramm and the studies are based upon sound technical principles. These little studies are not a bit dry, but on the contrary they are entertaining to play.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Beginning with the Pedals of the Piano By Helen L. Cramm

This will prove to be one of the best little Pedal Books ever issued. It may be taken up to advantage even by students who are in the second grade and as a matter of fact, it is better to take up a little pedal work in this grade and then continue on by gradual stages. Everything that Miss Cramm writes proves interesting to the young student. We are convinced that this new work will add another to her long list of successes.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

From the Dalles to Minnetonka Five Impressions for the Pianoforte By Thurlow Lieurance

This work is now on the press and copies will be ready very soon. These five pieces may be termed real American music; they are either based upon Indian themes or they are in characteristic style the music of all out-doors. All players will like the new concert transcription of the famous song, *By the Waters of Minnetonka.* The other numbers are original piano pieces.

The special introductory price in advance of publication is 40 cents per copy, postpaid.

Technic for Beginners Preparatory to Hanon or Pischna By Anna Priscilla Risher

This may be regarded as the first technic book. "Finger-Exercises" for daily use over a considerable period are essential almost from the very start. These are not provided for as a rule in the instruction book. After the young student has learned the rudiments and attained a correct hand position and finger action, the time has arrived for the daily technical work. Miss Risher's new book is just right for this purpose, containing two-finger exercises, five-finger exercises, preparatory scale work, etc.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

A Dozen Melodies for Saxophones By Clay Smith

Mr. Clay Smith is well known poser and entertainer. The s however, is one of his special Smith has conceived the idea of twelve gems from his many songs and setting them as solos. Mr. Smith's melodies are ing character and splendidly a the voice, but at the same time such as may prove effective on a instrument, particularly the saxo

The collection is made up so t be used for solo work for the v ophones, or as duets for any tw of the saxophone family, in e with piano accompaniments i There will be a volume for solo E-flat saxophones, a volume fo second C melody saxophones, for solo and second B-flat bar ophones.

These saxophone volumes m dered at the advance of publica of 30 cents per copy, postpaid. accompaniment volume may be advance of publication at the s price of 45 cents.

Six Picturesque Studies for the Pianoforte By Paul du Val

Good fourth grade studies numerous than those of most oth but the new picturesque studies are just right. They show t amount of technical and musica ment over the third grade an extremely interesting to practi one of them is just as good having a separate title of its each number also is based technical figure which will p essential in fourth grade work.

The special introductory pr vance of publication is 30 cent postpaid.

Romeo and Juliet Operetta for Men By John W. Brigham

Cleopatra, an operetta by writer, is a real "hit" and has frequently by high school and clubs and other men's singing tions. *Romeo and Juliet,* like is a screamingly funny burl well known classic. Who cann the possibilities for burlesque speare's highly emotional ro Brigham has made the most o tunities and the music, some of other parts original, is always never exceeds the capabilit average amateur organization. this play may be ordered in publication at the special price postpaid.

A New Collection of F Songs and Choruses fo all Occasions

All the world loves to sing. many occasions, however, v known songs or old favorites ar so arranged that they may be in unison with an accompani four-part harmony. For the school use, community singing gatherings, such numbers are In our new book all the favor all kinds will be assembled. a very comprehensive book, l and extremely well made.

The special introductory p vance of publication is 10 cen postpaid.

Album of French Com For the Pianoforte

Our new Album of piano by French composers is well It will include some of the n pieces from Godard to Debu ing of course Chaminade, W and others. This volume wi in grades 4 and 5 in point of

The special introductory p vance of publication is 35 cen postpaid.

HE PRESSER PERSONNEL

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

ir. George H. Benzon

In introducing Mr. George H. Benzon o our patrons, we might well call im the Dean of Music Clerks, since e has been actively engaged in hand- ng music publications for over 55 ears.

Mr. Benzon started with the firm of ee and Walker. From this organi- ation he went to J. E. Ditson Co., and nded his many years of service with he Ditson Co. in September, 1909, hen he joined the Retail Organiza- on of the Theodore Presser Co.

Mr. Benzon belies his years of ser- ice by keeping apace with things in ur busy Retail Department, where he always ready to assist the young or he old, the distinguished or the un- nown with the same genial courtesy, hich is just as important a part of is equipment as the vast knowledge f music publications that he has ac- uired in his years in the music busi- ess.

It would be possible to write vol- mes upon one who has been in the usic business since 1870, and in this troduction of Mr. Benzon, it is diffi- lt to hold to the space limited, but e can not refrain from saying we are roud to have in our organization a an who gave his services to Phila- lphia musicians in days when they uld drive down Chestnut Street a e their horses to a hitching post, and ho is still serving them in these days hen the same street is so busy that the affic police hardly spare the auto- obile chauffeur enough stopping time allow a passenger to alight.

dard Second-Grade eations for the Pianoforte

who are familiar with our series sonably priced albums which in- the Standard Elementary Album, Player's Repertoire, Popular Recital , Music Lover's Duet Book and will appreciate just what is meant ve say that there will be the same sity in the contents of the Stand- cond Grade Recreations as in pre- issued albums of this series.

y teacher should secure a copy of bum in advance of publication, if other reason than to have in his a reference volume of second grade g pieces. All of the numbers in lbum will be procurable in sheet form, should the teacher desire to any of them for the pupil sep- .

collection will be a fine variety of for the piano player only in the grade.

ial advance of publication price is s per copy, postpaid.

Album ara Heinze

rand new edition of this standard ation will soon be published in the r *Collection*. It contains twenty- sier compositions of this great com- principally selected from the *Suites artitas*. This material is excellent e as a preparation for the *Well- red Clavichord* and the more ad- Bach compositions and is included curriculum of many teachers and schools. While this book is in pro- publication we are booking orders t the special price of 30 cents a copy, d, and those who use this book r work, or intend to use it, should lvantage of the opportunity to obtain at this exceptionally low price.

First Garland of Flowers Favorite Melodies in the First Position for Violin By Julius Weiss, Op. 38

Within the past few years we have added to the *Presser Collection* quite a few standard violin educational works. This collection of delightful little first position pieces is frequently used by teachers as it never fails to arouse the interest of the student. Not only are the violin parts all easy to play and in the first position, but the piano accompaniments, too, offer no technical difficulties. This book will be published with the usual carefulness of detail given all the numbers in the *Presser Collection* and while it is in the course of preparation it may be ordered at the special price of 35 cents, postpaid.

Advance of Publication Offers Withdrawn

Although all of our advance of publication offers usually run at least four to six months, there always are some who rush in orders on the advance of publication price after the advance of publication price has been withdrawn.

Four excellent publications are withdrawn with this announcement and although these cannot be secured any more at the advance price, there are quite a few works still being offered at the low advance of publication price and our readers should carefully scan these offers and order now, any that have an appeal. One cannot tell just what month the advance of publication price will be withdrawn and the opportunity now open will be lost.

Previous publisher's notes have well described the four works now being withdrawn; therefore, we will not take space in this withdrawal notice to describe any of them.

These works with their regular prices are *Easy Studies In Early Grade*, by Bilbro, 75 cents; *Older Beginner's Book*, by John M. Williams, $1.00; *Etudes for the Violin*, Op. 32, Book 1, by Sitt, 75 cents; *Rhythmical A-B-C's for the Violin Beginner*, by A. Louis Scarmolin, Violin part 35 cents and Piano accompaniment 40 cents.

We might mention this last work is sold in two parts because it is specially suited for class teaching.

Any teacher who desires to secure any of these new works for examination may do so according to our regular "On Sale" plan.

Beware of Swindlers

Pay no money for ETUDE MUSIC MAGAZINE subscriptions unless the solicitor is personally known to you or can produce credentials which are above question. There is a man at present travelling through Minnesota, who uses various aliases, sometimes giving the name of Sobel, again, Schaible and many other variations, but usually beginning the surname with an S. He does not use official receipts, but sells yearly subscriptions for ETUDE at a so-called bargain rate less than $2.00, and claims to be working for the Crowell Publishing Company. Look out for him! Also look out for so-called students working their way through college, fake ex-service men and others with hard luck stories. The man or woman who takes subscriptions for ETUDE MUSIC MAGAZINE has nothing for which to apologize. Our representatives are alert, up-to-date, honorable men and women, nearly always permanently located in the town in which subscription is taken.

Daily receipt of complaints from all over the country make this notice imperative. We cannot be responsible for the work of swindlers and frauds.

Your Expiration Date Appears on Every Etude Wrapper

If, to the right of your name, the date is April, '26, it means that the last paid-for copy was mailed in the month of April. Please let us have your renewal promptly which will avoid misunderstanding and confusion.

(Continued on page 322)

THE PRESSER PERSONNEL

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

Mr. Louis A. Laemmel

The great miscellaneous stock of music publications, carried by the Theodore Presser Co., benefits not only those dealing direct with the company, but indirectly serves thousands of others. Most music publishers supply only their own publications to music dealers, but the Theodore Presser Co. is continually called upon to furnish, from its large stock, publications whose publishers are unknown to dealers. In this way we materially assist our dealer friends in giving satisfactory service to their patrons.

In order to handle the many orders of this nature which we receive, it is necessary to utilize the services of quite a few clerks. It frequently happens, however, that dealers send us special delivery or telegram requests for publications of other companies. All such special dealer orders are handled by Mr. Louis A. Laemmel.

His 40 years of experience in the music business have well equipped Mr. Laemmel for this important service, and, in addition to filling these special orders, he gives personal attention to the messengers of dealers in Philadelphia and vicinity, who make calls upon the large and varied Presser stock. He began his career in the music business with Orrin Rogers in 1885, later going to the J. E. Ditson Company. In 1911 the Ditson concern, then a branch of the Oliver Ditson Co., was closed, and Mr. Laemmel joined the Theodore Presser Co. at that time. He has since become one of the most faithful and most industrious members of the Presser organization, and is a highly valuable member of the Trade Dept.

Pianologues

The clever pianologue merits a place on every entertainment program. For either stage or home use, we especially recommend the following as *musical readings* or as vocal solos.

DREAMIN' IN DE TWILIGHT	(Negro)
THE HALF O' ME KINGDOM	(Irish Dialect)
HATS	(Humorous)
KEEP A SMILIN'	(Inspirational)
THE LADIES' AID	(Humorous)
THE LADY WHO LIVES NEXT DOOR	(Humorous)
THE MISSIONARY BARREL	(Humorous)
A PERFECT LITTLE LADY	(Humorous Juvenile)
SPEAK FOR YOURSELF, JOHN	(Swede Dialect)
STYLE	(Humorous)
TONY ON DA PHONE	(Italian Dialect)
THE YOUNGEST IN THE FAMILY	(Humorous Juvenile)

In full sheet music form—price, postpaid, each **35c.**
The set of "ETUDE 1926 COLLECTION," **$3.50.**
Large catalogue of entertainment material on request.

World of Music

(Continued from page 247)

"Singing," a new voice magazine, edited by Alfred Human, is welcomed by THE ETUDE to the circle of Musical Magazines. The publication is fresh and interesting, it fills a peculiar need, and has our heartiest wishes for a long and successful career.

The Concordia Society of Wilkes-Barre, Pennsylvania, won first place in the contest of the Associated Glee Clubs of America, held in the Metropolitan Auditorium of New York on February 6th. Second place fell to the Guido Chorus of Buffalo.

Fighting Fires By Radio is a future possibility as a result of recent experiments in New York where a gas flame was extinguished by the vibrations of a tuning fork. Each building may in the future have its "pitch" properly registered so that a screech from the proper siren will extinguish a fire therein.

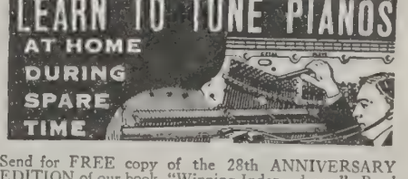
The Associated Glee Clubs of New York gave a remarkable concert on February 6th, at the Seventy-first Armory, when twelve hundred men sang under the direction of Walter Damrosch. The movement has gained such momentum that it is predicted that there will be a nation wide organization of men's singing societies.

The New Civic Auditorium of Los Angeles, California, was dedicated on January 31, by a gala performance of "Aïda" by the San Carlo Opera Company. The new room, with its stage adapted to concert, opera or civic meetings, is one of the best in the entire country and seats sixty-five hundred people.

Emile Paladilhe, the well known French composer, born at Montpellier in 1844, is reported to have died recently in Paris. He won the *Grand Prix de Rome* in 1860; and after several unlucky attempts at writing for the stage, his opera "Patrie," adapted from Sardou's play, had a great success.

Schubert's Romantic Opera "Fierabras" had what was virtually a world première at the Théâtre de la Monnaie of Brussels, late in February. Though written on the commission of Barbaja, in 1823, it was never presented during the lifetime of the composer, nor had it had a complete performance since that time, till given in the Belgium capital.

Boieldieu's "La Dame Blanche" was revived at the Opéra Comique of Paris, in January, in celebration of the one hundredth anniversary of its composition and has been having a successful run, *L'Echo de Paris* saying that it "has lost none of its charm and freshness."



The Royal Court Orchestra of Stockholm is preparing to celebrate its four hundredth anniversary with a musical festival. The orchestra was established in the reign of King Gustavus Vasa, the founder of modern Sweden, and it has had since 1526 a continuous existence under various forms of patronage.

The Salzburg Festival is to take place from August 5th to 29th. Mozart's "Magic Flute" and "Abduction from the Seraglio," Johann Strauss's "Fledermaus" and Richard Strauss's "Ariadne auf Naxos" are announced for presentation.

Henri Verbrugghen has been re-engaged for another period of three years as conductor of the Minneapolis Symphony Orchestra.

The Late Queen Mother Margherita of Italy was an accomplished organist as well as a great devotee to the King of Instruments. She was long a pupil of the great Filippo Capocci, organist of the church of St. John Lateran. An organ was especially installed in the Royal Palace at Rome for Her Majesty's personal use.

Stravinsky's "Les Noces" had its American première at Aeolian Hall, New York, on the evening of February 14. As a real valentine to the composer, it seems to have restored him "to his former high favor in these precincts." It was given at a concert of the International Composers Guild, under the baton of Leopold Stokowski, and with four recognized modern composers, Germaine Tailleferre, Alfredo Casella, Georges Enesco and Carlos Salzedo seated humbly at pianos in the orchestra, and well known singers standing behind music racks (like so many mere musicians!), all giving themselves seriously to the interpretation of Stravinsky's voice-piano-and-percussion orchestration. The ballet is a symbolic depiction of a Russian wedding ceremony, but was this time given a purely concert performance.

Send for FREE copy of the 28th ANNIVERSARY EDITION of our book, "Winning Independence." Read how students master TUNING with our Tune-A-Phone, and WHY our graduates head the profession in all parts of the world. With Bryant's patented devices, tools, charts, and lessons, one learns quickly and easily. Low tuition, easy terms. Diploma granted. MONEY-BACK GUARANTY. $10 to $25 a day, exceptional opportunities, and an ideal profession await you.

Premium Workers

The following very desirable rewards for new ETUDE MUSIC MAGAZINE subscriptions are yours without any cash outlay. Any music lover, student or teacher, not already an ETUDE subscriber will be glad to hand you a subscription for ETUDE MUSIC MAGAZINE if the publication is properly presented. Considering the splendid music in each issue which in twelve numbers would cost far in excess of the small subscription price, $2.00, it is not difficult to convince anyone what a wonderful investment a year's subscription to the ETUDE MUSIC MAGAZINE means to any music enthusiast.

We will give the following standard merchandise for the number of new subscriptions designated—

Sterling Silver Powder Box—with compact, rouge and lip stick. Two subscriptions.

Tooth Brush Holder—white celluloid. One subscription.

Instant Service Salt and Pepper Sifter—no shaking, press the button and the sifter does the rest. One subscription.

Ladies' Envelope Change Purse—very popular and handy for pocket or bag. One subscription.

Six-Hook Key Purse—black or brown cowhide, each key instantly available for service. One subscription.

Friendship-Pin—solid gold, with four pearls, safety catch. Two subscriptions.

Cuff Buttons—chased, gold filled. One subscription.

Bar Pin—solid rose gold, with safety catch. Two subscriptions.

Sterling Silver Thimble—one subscription.

Child's Locket and Chain—with pearl setting. One subscription.

Leather Case with Folding Shoe Horn and Buttonhook—you will find one of these convenient for overnight visits. One subscription.

Leather Vanity Case—with mirror and bone comb; just the thing for bobbed-heads. One subscription.

Send post card for premium catalog, showing many other desirable rewards.

Unavoidable Delay in Delivery of "Etudes"

We have been disappointed during the past two months because of the unavoidable delay in the delivery of ETUDE MUSIC MAGAZINE. We ask our subscribers to bear with us and have every assurance from our mechanical department that beginning with the April issue, delays will be a thing of the past. If, however, any copies have gone astray, a post card to the Circulation Department giving us the date of the missing number will receive careful and immediate attention.

THEODORE PRESSER CO. PHILADELPHIA,

When You Come to the "Sesqui"

Independence Hall

THOUSANDS and thousands of people from all parts of the United States are planning to attend the Sesqui-Centennial of the Declaration of Independence which will be held in Philadelphia, "the Cradle of Liberty," from June to December next.

WHEN you come we want you to make the Theodore Presser Company your headquarters. Have your mail addressed here if desired. Meet your friends here. Let us serve you in every practicable way. You will be welcome and will find experienced, courteous attendants ready to give you information and other help.

WE want you to see the establishment founded by Theodore Presser, the largest music publishing business in the world, and the largest musical magazine in the world, now scheduled for still greater expansion in every direction.

The Sesqui-Centennial Philadelphia 1776 1926 150 Years of American Independence

YOU will find a hearty welcome at 1712 Chestnut Street, as our relations with our customers at a distance have been so intimate that we are looking forward to meeting this Summer personally hundreds of old friends, whose letters have been coming to us for years, but whom we have never seen.

THE Theodore Presser Store is right in the heart of the newer business section of Philadelphia, only a short distance from the best Hotels and the Railroad Stations.

JUNIOR ETUDE

CONDUCTED BY ELIZABETH A. GEST

"Jean Finds Something"

By Patricia Rayburn

mer, Jean had gone to visit her in a dear, big old house ry. Though there were no lay with, there were a thou- o be done in the country that n, especially to one like Jean, the city the rest of the year. mber, Jean started to take s. Like many another boy was very eager and happy to olved that no one would have o practice. But before many assed the novelty had worn onstant routine of practicing se all enthusiasm. She would a new piece for two or three nen she would start complain- d of that old piece! I can't and its ugly, anyway!"

worked steadily, she would great progress. Miss Elson ach month for the best work, er won any. Work done by , is rarely finished.

again, and the visit to grand- ere was no piano there, and emed not to have to practice! Jean could keep up her music summer," said Mother. But possible.

long walks to be taken in ows; there were cherries and e picked from the lower the big old trees in the

ay was rainy and cold, and said, "You must stay in to- f and amuse yourself."

red about the big rooms. She ner pretty story-books to read. ed at all the pictures in the g before. How lonesome she

red up the stairs to the big, was dim up there and in the vere big shadows. But Jean d, for at once she noticed at nare, box-like thing. She ap- proached it. Why, it was a—a tiny, old-fashioned piano!

How nice! She could try over her *Bunny,* and *The Dancing Daisy Fields,* and as much as she could remember of *Dolly's Good Night Song.* "How I wish I had my music book here!" she said, to herself.

Far from being unhappy at finding this little old piano, she was glad. It would help to pass the time.

Downstairs she ran. "Oh, Mamma and Grandma! There's a piano in the attic! Whose is it?"

Mamma looked puzzled, but Grandma replied: "I had forgotten we had it. It is one your mother had when she was a little girl. It is all out of tune and nobody ever played on it, so I had it taken up there out of the way."

"Oh, Grandma, please open it!"

Mother was astonished. "I thought you were the little girl who didn't like her music?"

"Yes, I do! And I want to try over my pieces."

Up to the attic they went. The old piano was opened and dusted. It was badly out of tune and several keys wouldn't work. Jean's mother thought that, as the tone was so bad, it would be best not to let her play on it, but she begged hard.

Jean played her four little pieces over and over again. For the first time, she found how much fun and pleasure can be gotten out of playing the piano.

Jean and her mother went home a week or so later. Then it was that Jean appreciated the lovely big piano in her home, with the fine, clear tone, so different from the tinkle, tinkle of the little piano in grandmother's attic.

Club Corner

DEAR JUNIOR ETUDE:

I have been interested in reading the letters in the JUNIOR ETUDE department.

Last year we organized a music club and called it the "Treble Clef Club." We gave an interesting program before the high school. It was a Japanese program, and we used piano piece, songs and drills of a Japanese character, dressed in Japanese costumes. This year we are planning a Spanish program.

Our club meets the first Wednesday in each month, and we study two composers and two modern musicians at each meeting. Our object is to raise the standard of music in our town. Our motto is: "Always ready and willing."

We like the idea of the club corner, and hope it will continue.

From your friend,
MARIAN HUMPHREYS (Age 13),
(Secretary) Indiana.

Question Box

DEAR JUNIOR ETUDE:

I shall be extremely thankful if you will please publish this letter in the JUNIOR ETUDE page, as there is something I want to say to all your little readers who have been so kind as to answer my letter in the last May issue, 1924. I have received so many letters that it seems impossible to answer all. And will you please tell the Junior readers that Hong-Kong is by no means a typical Chinese place. It is a semi-European colony. I am a Chinese, but a Westernized one, and I am 17 years old. Your Magazine is a wonderful book. It is no wonder it has touched far-off China. Thanking you very much. Your friend,
NELLIE CHENALLOY (Age 17),
P. T. O., Hong-Kong, China.

DEAR JUNIOR ETUDE:

This is my first letter to the ETUDE and I hope I will soon see it in print. I love music and sometimes I find it hard to believe that some people grumble when they hear the piano playing. I enjoy the privilege of having a good music teacher. Ballina is a large town and there is some beautiful scenery around it. I am getting THE ETUDE for quite a long while and needless to say enjoy it immensely. A great friend of mine is very interested in THE ETUDE, although she does not get it.

Your Friend,
MARY MCMONAGLE (Age 11),
Ballina, Co. Mayo,
Ireland.

Who Said Neat?

You know, one of the conditions for winning prizes in the Junior Etude contests is to be *neat.* Some, of course, are really quite neat. Some are fairly so, and some are—well, just terrible!

And as some of you *un*-neat people do not seem to know what neatness means, the Junior Etude is going to show you something pretty. This is a *photograph* of a letter that came from England.

Butts Farm
Driffield
Cirencester
Gloucestershire
England.

January 7th, 1926.

Dear Junior Etude

I have been taking The Etude for over a year, and am very pleased with it. My Sister (who lives in America) sends it to me every month, and I read it from beginning to end.

I love music very much and I have studied, both piano and organ, ever since I was five years old.

I am an Organist now, and have been, since I was fourteen.

My favourite Composers are Chopin and Liszt. I can play Chopin's Nocturne No2 Op:9 entirely from memory.

I have heard both Cortot and Paderewski and I think their playing is really magnificent.

I live on a farm, but I find nice time in which to practice. Is it not a true saying, Practice makes Perfect?

I could very much like to hear from Junior readers my age, who are interested in music, especially those who live on Ranches or in the Sunny South.

From Your Friend
Gertrude M. Chadney age (17)

JUNIOR ETUDE—Continued

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original essay or story and answers to puzzles.

Subject for essay or story this month "The Minuet". Must contain not over one hundred and fifty words. Any boy or girl under 15 years of age may compete whether a subscriber or not.

All contributions must be received at the JUNIOR ETUDE Office, 1712 Chestnut St., Philadelphia, before April 20. Names of prize winners and their contributions will be published in the July issue.

Put your name and age on upper left corner of paper, and address on upper right corner of paper. If your contribution takes more than one sheet of paper do this on each sheet. Do not put puzzles and essays on the same sheet. Do not use typewriters.

Competitors who do not comply with ALL of the above conditions will not be considered.

WHAT I LIKE BEST IN MUSIC
(Prize Winner)

What I like best in music is good technic. Many people can play runs fairly well, but few can play them perfectly. My teacher, a very fine artist, is a man with very brilliant technic. To me, when any one has a fine technic, it shows that practice made it. It did not fall from the sky to the balls of their fingers. Many people are able to play chords, but to find one who has the ability to play runs and scales correctly, is what I call "over the mountain." How delighted we are if we see a person sit at the piano and play a piece with lovely smooth runs, without jumping the keys. It does my soul good. Does it yours?

GRACE CORDIA MURRAY (Age 14),
New York.

WHAT I LIKE BEST IN MUSIC
(Prize Winner)

The study of harmony is what I like best in music, because it mentally clears the way in piano and organ work. Music is built on harmony. A composer is required to have full knowledge of it before he can compose. Everything in music must have a form as definite as an essay in English composition. Harmony has helped me so much that I would not be without it. I understand what I am playing. It has helped me in sight reading, transposing and ear training. It seems to me that to hear music and not understand its structure is like a man partly blind trying to see a beautiful picture. The three great factors in musical composition are melody, rhythm and harmony, and all three are included in the study of harmony.

EDNA KAEBER (Age 14),
California.

WHAT I LIKE BEST ABOUT MUSIC

Music offers such a great variety of likeable things that it sometimes is hard to make a choice, and I don't think there is anyone who does not enjoy it in some way. What I like best about music is that it educates and refines the mind; it makes a person popular and wins a host of friends. Everyone loves music and if one is able to play any kind of instrument there is no feeling of being friendless and lonesome, for music has the power of drawing crowds of people wherever one happens to play, and listening to it always puts a feeling of well-being in one's heart.

MELVIN C. ECKLEY (Age 14),
Virginia.

Honorable Mention for Essays in January

Anna Fay Sutphin, Florence Skeels, Camilla J. Roy, M. E. Forney, Charlotte Campbell, Janice Kennedy, Gladys Sargent, Ruth Stevens, Selma Richter, Katherine Kamper, Helen Barkmer, Helen Estabrook, Eleanor Scott, Ruth Warman, Ola K. Dinny, Evelyn Perkins, Hattie L. Eckley, Ethel Hartman.

DEAR JUNIOR ETUDE:

This is my first letter to the ETUDE and I hope it will be printed. I have been taking the ETUDE for six years. I am fifteen years old and in the tenth grade in the school and the fifth in music.

I live in a small mining town, which has recently been organized as a city, in northern Michigan. Our winters are very long and cold. There are many beautiful lakes and rivers here, and beautiful islands in the lakes. The shores are bordered with cottages, where people spend the summer. We have a nice school, too, and nearly a thousand pupils. Our little city is very proud of it.

From your friend,
MADELINE VILAS (Age 15),
Mich.

Puzzle Corner

Puzzle

Number your alphabet from one to twenty-six. Each of the following numbers represents a letter, which when correctly placed will give the name of a famous composer. When arranged on the dots, the word reading down will be an important musical term.

Answer to Puzzle in January

1, Violin—linnet. 2, Piano—anon. 3, Cornet—nettle. 4, Horn—ornate. 5, Trumpet—petunia. 6—Several answers fit number six, as, Trumpet—petrol; helicon—condor; organ—gannett; organ—gander; horn—ornith.

Prize Winners of January Puzzle

Margaret Chamberlain, age 12, Illinois.
Gretchen Kohler, age 13, South Dakota.
Selma Richter, age 13, Maryland.

Honorable Mention for January Puzzles:

Gladys Frederick, Ruth Worman, Helen Estabrook, Francesca Hall, Doris Scaulau, Junietta Perra, Estelle Devine, Elizabeth Roatz, Josephine Davis, Camilla J. Roy, Francis Slavin, Frances Kraft, Margaretta Mullin, Henri Sibsky, Velma Smith, Marion Smith, Jackson Martin, Jean Bellman, Isabel Bornstein, Helen Hillman.

Question Box

DEAR JUNIOR ETUDE:

What must I do to attain a true interest and enthusiasm in my music? I find it very difficult to concentrate and practice. I play in public a great deal, and play fairly difficult pieces; but I am sure I could play much better if I could only cultivate a love for practicing. I love music with all my heart, but I am living in a beautiful out-of-door country and love sports, and also have many interests in school besides my music. I hope you can help me.

J. B. (Age 15),
Canada.

Answer.—It often happens that a lack of incentive causes a lack of interest in practice; but as you have, as you say, the incentive of frequently playing in public, there must be another cause of your lack of interest.

Perhaps you are really trying to do too many things—school affairs, out-door sports, and music—all at once, and consequently you are tired physically.

Close your piano. Do not under any condition open it for a week; but stay out of doors. You will be so glad when the week is up and you can get back to your music that it will become a new pleasure to you, and you will take it up with renewed interest. Memorize all your pieces, so that you need never use notes when playing in public.

I have a hand
And fingers five.
A left one and a right,
And there are lots
Of things to do
To keep them busy, quite.

But if my hands
And fingers five
Would practice all they could,
They'd learn to play
The proper way
As all good fingers should.

Alabastine Time is He

Time of clean, fresh beauty coming into homes, as well as gardens. Time of color harmonies. Time of renovation, of change and improvement.

With the Alabastine colorcard, you can choose the loveliest tints and colors for the different rooms whose walls need decorating—certain of pleasing results, with Nature's tints.

With genuine Alabastine (and it is never genuine unless it comes in the package pictured on this page, with Cross and Circle printed in Red) you are certain, too, of the utmost economy commensurate with good taste. No substitute can duplicate this package—any more than it could duplicate Alabastine results. So insist on the genuine.

Use Alabastine on any interior surface. On plaster, wallboard, paint, burlap, canvas, or even old wall paper where it is fast, has no raised figures, and contains no aniline dyes. Just mix Alabastine with cold or warm water. It won't rub off if properly applied.

When unusual tints are desired, combine standard Alabastine colors. When lighter colors are desired, add white Alabastine.

Ask your dealer for the latest Alabastine colorcard, and as soon as possible advise him what colors you require. Insist on genuine Alabastine, to save yourself the disappointing results of using a makeshift instead of Alabastine. Signed—Alabastine Company, 702 Grandville Road, Grand Rapids, Michigan.

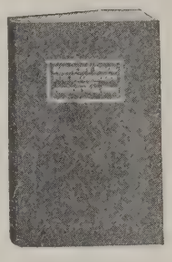
IDEAL TEACHING HELPS
FOR
SUMMER CLASS INSTRUCTION

Activity is the best publicity. When school studies cease then the progressive music teacher organizes Special Summer Classes of great benefit to the students and the teacher's prestige.

These works are recommended because they aid in accomplishing much in a short time. Teachers may secure any of them for examination.

An Immensely Popular Musical History



Standard History of Music
A Text Book for Students of All Ages
By JAMES FRANCIS COOKE

Price, $1.50

NO MUSICAL education is complete without the study of the history of music. The "Standard History of Music" is an invaluable text book for music history classes, giving the essentials of musical history authentically, clearly and in a logical manner.

It is a thoroughly practical text book of forty-two entertaining chapters. Each chapter forms a complete story lesson with ten test questions at the end for use in reviewing the work contained in the lesson. Many illustrations add to the interest-holding powers of this extensively used musical history.

The Most Used of All Harmony Books

Harmony Book for Beginners
Brief, Simple, Vital and Practical
By PRESTON WARE OREM

Price, $1.25

"A HARMONY BOOK WITHOUT MYSTERY." In laying strong foundation for future musicianship this excelle work is unsurpassed for class use or self help. It is n a re-hash of the old "cut and dried" harmonies, but gives modern, sound treatment of the main essentials of the subject an understandable and interesting manner.

The use of blank music staves, furnished in the book, and a series of questio with each chapter are most practical in testing the student's grasp of the subject.

Secrets of the Success of Great Musicians
By EUGENIO PIRANI

Price, $2.00

THIS IS a book of biographical information written by a pianist, composer and teacher, whose wide musical experience and remarkable intimacy with the masters of many countries, fit him pre-eminently for the task of passing on to others the knowledge of the attributes that counted toward the success of great musicians.

Each chapter is an inspirational life analysis, starting with Bach down to Debussy, and will stimulate to greater endeavor and diligence those who are trying to succeed in the music world.

Music Writing Book
A Thorough Course in Notation
By ANNA HEUERMANN HAMILTON

Price, 60 Cents

WRITING IS not only the surest way of gaining exact knowledge—it is also the easiest way. Here we have an exceptional writing book which gives the theoretical as well as the practical side of music writing. It is not a mere series of patterns to be worked out by the student, but gives abundant opportunity for original work.

This is an excellent book for class instruction, as it may be utilized for teaching the rudiments of notation to students who are but little past the elementary stages.

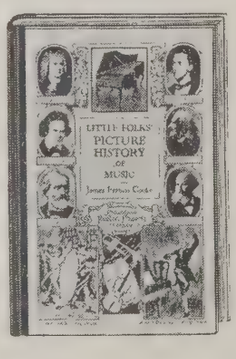
Theory and Composition of Music
By PRESTON WARE OREM

Price, $1.25

AN UNEQUALLED guide in the practical application of harmony to composition. This work is a concise and logically progressive text book, teaching such phases of the subject as melody making, harmonizing melodies, writing of accompaniments, modulation and musical forms,—every step explained in plain and colloquial language.

The whole aim of the book is to teach one to write—clearly, sensibly and fluently—and to know the "whys and wherefores." It is a sequel to the same author's immensely successful "Harmony Book for Beginners."

Musical Progress
A Series of Practical Discussions of Present Day Problems in the Tone World



By HENRY T. FINCK

Price, $2.00

A WORK that will prove interesting and inspiring to every music lover, teacher and student. Written in a truly fascinating style, it presents a wealth of musical topics in a liberal and enlightened spirit.

The author deals with musical atmosphere, prodigies, celebrities, applause, business in music, patrons, failures, and weaves into the whole collection delightful shades that charm the reader and easily hold his interest.

An Immediate Success Wherever Used

Young Folks' Picture History of Music
By JAMES FRANCIS COOKE

Price, $1.00

THIS FIRST "history of music," telling all with an intimate touch which really makes it a fascinating story book, makes possible the instruction of young students in the origin and development of music. It is compiled in a charming manner and covers many phases of musical history, including anecdotes and biographical sketches of great composers.

It even tells how any little child may learn to compose a tune. One hundred picture illustrations are furnished on sheets, to be cut out and pasted in their proper places in the book. The young student enjoys this touch of play.

A Fine Work—Excellent for Juvenile Classes

Musical Composition for Beginners

By ANNA HEUERMANN HAMILTON

Price, $1.00

THIS VOLUME imparts a wealth of knowledge which is c culated to further the musical intelligence of pupils a to keep alive their interest in music lessons. From simplest possible beginning the student is introduced to fascination of "really truly composing." Its primary purpos to teach the art of writing music hand in hand with gain acquaintance with the rules of harmony, following the p ciples used in teaching the writing and forming of sentences English before waiting until all rules of grammar are maste

Although designed for children as young as six years with no knowledge of h mony, students of more mature years will find in it worth-while hints as to "t how to go about it."

Catalogs covering any classification of music publications cheerfully sent upon request.

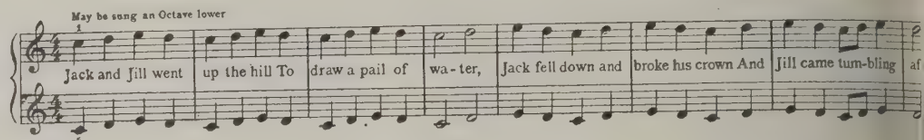
CHILDREN'S MUSICAL MOMENTS

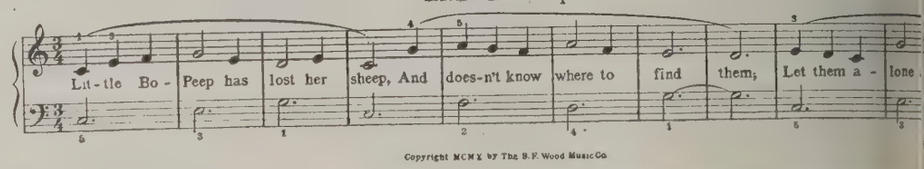
A New Natural Method for the Pianoforte: By STELLA MORSE LIV

Edition Wood No. 614. Price, 85c *net*



Also published with beautiful multi-color title like the accompanying illustration. Price, $1.00

"To sing, to play, we learn the way;
Then how and why comes bye and bye."



THIS intensely practical work has well been called the "Natural Method" of teaching children the first steps in piano playing. The same pedagogical principle that first teaches the child words and sentences, and afterward the alphabet, is applied to his musical instruction. learns musical phrases and periods, and afterwar

From the start, each exercise is built upon son ery rhyme or other attractive verse, so employed words at once define the rhythm, and in many ca gest the melody-line as well. For example:

Jack and Jill.

Little Bo-Peep

Copyright MCMX by The B. F. Wood Music Co.

IN addition to this, the careful arrangement of the exercises makes for real progress, as does the effective device of having the little student write his lessons in a note-book. An Appendix is especially designed and adapted to the purpose of practice in reading notes and in counting, so that the passage from all words to no words, which will occur when another book is taken up in second-year work, is greatly facilitated.

The advantages claimed for this method are: T ing of the ear; superior rhythm; phrasing; all mu orized; minimum amount of practice required; ur interest of the child; love of music fostered ar oped; and the playing of music in a musical wa

Teachers with very young pupils will wish to excellent book to their teaching repertoire.

The World of Music

SSEVITSKY

Serge Koussevitsky received in the first week of March the honorary degree of Doctor of Music, from Brown University of Providence, Rhode Island. In conferring the degree President William H. P. Faunce referred to the eminent musician as "a distinguished virtuoso and interpreter of the music of all peoples." He it is who mostly has revived the glories of the Bos- iphony Orchestra which so long set the e of American accomplishments in this musical art.

First Mozart Operatic Festival en in America will be held at Cincin- ring the first week of May when "Don ni," "Cosi Fan Tutti" and "The Mar- Figaro" will be given in Emery Au- n, by the Hinshaw Opera Company, in English.

Kansas State Music Teachers' ation held its eighteenth annual con- at the Kansas State Teachers' College, , on February 25 and 26. D. A. Clip- Hazel Gertrude Kinscella and Charles Skilton were leading speakers; and warthout, of the University of Kansas ence, was elected president.

William Capet Clopton Collec- f Violins is reported to be about to d in the National Museum at Wash- The connoisseur and collector died at e in Baltimore, on March 12; and the ents he had assembled are said to be at considerably over half a million

FREDERICK WOLLE

Helen Searles Westbrook achieved ners in the contest in organ-playing Society of American Musicians, since he has played the *Organ Concerto* by ith the Chicago Symphony Orchestra rederick Stock, at Orchestra Hall.

Thirty Operas in Manuscript, including several from Europe, were received in the Sesqui-Centennial International Competition which closed on March 1st. The winner of the prize will receive three thousand dollars for the privilege of the première of his work but will retain all other rights to the composition.

The Duke of Leuchtenberg, described as a descendant of Napoleon's stepson, Eugene Beauharnais, and a cousin of the late Czar of Russia, has had a successful appearance as orchestral conductor at Munich. He has renounced all titles of nobility and asks to be known in the future merely as Nicolaus Leuchtenberg.

An Organ Built for George III, in 1760, and given to Queen Charlotte who later gave it to the Princess Amelia, after which it was sold to Lord Egremont of Sussex, has lately been presented to and set up at Eton College. It is said to be an admirable and untouched specimen of its period.

"L'Enfant et les Sortilèges (The Child and the Witches)" a fairy-tale opera which had such a success at Monte Carlo in March of 1925 and which unites the talents of Maurice Ravel and Madame Colette, the popular French novelist, has lately had its successful Paris première at the Opera Comique.

Mme. Jean de Reszke has presented to the Covent Garden Opera Museum, the costume worn by her illustrious husband as *Walther* in "Die Meistersinger."

The Choruses in most London theatrical productions of musical note are often of surprising excellence; and this for the reason that many young singers—often advanced or finished scholars of the Royal Academy of Music, the Royal College of Music, or of the Guildhall School of Music—are glad to join these organizations for the stage experience, and often step from them into solo rôles. Many young American singers could do worse.

The Philharmonic Orchestra of Berlin receives a subsidy of sixty thousand marks from the city government, which is to be raised to one hundred thousand marks. The Berlin Symphony Orchestra also receives a similar subsidy of sixty thousand marks.

The "Wedding Cantata" of John Sebastian Bach had its first performance in America, at a concert of the New York Chamber Music Society, at the Plaza Hotel on March 21st. A Bach première in these late years is sure enough novelty.

Emilie Frances Bauer, composer, pianiste, linguist and journalist, died unexpectedly at her New York home on March 9. Born at Walla Walla, Washington, she first attracted attention as a writer on the *Portland Oregonian.* Most of her best known compositions were published under the name of Francesco Nogero.

Opera at Fourpence has been made a success at Liverpool where a fortnight's engagement of the O'Mara Company, at prices ranging from fourpence to four shillings drew patronage to the number of twenty-five thousand. The experiment is to be repeated next season.

The Upright Piano Centenary is being celebrated in London where "Patent No. 5384 granted to Robert Wornum, of Wigmore Street, London, A. D. 1826" is the first on record. It was granted for the invention of the upright check action.

MRS. E. S. KELLEY

Mrs. Edgar Stillman Kelley, President of the National Federation of Music Clubs, is one of the leading protagonists of the American composer of opera. It was largely through her initiative that Francesco de Leone's "Algiala" was given two performances in Akron and two in Cleveland last year. It was she who inspired the organization of the American Opera Foundation of Cincinnati which brought Ralph Lyford's "Castle Agrazant" to production on April 18, and which is bound to produce at least one American Opera each year.

Samuel Sebastain Wesley, the eminent English organist and composer of church music, died fifty years ago the nineteenth of April. The British Music Society is celebrating the event by compiling lists of his works for the convenience of lovers of his art.

Schumann-Heink returned to the Metropolitan on February 23 for a single appearance as *Erda* in "Das Rheingold," in celebration of the fiftieth anniversary of her début. Twenty-eight years had passed since her American début, and nine since she had been heard in a Metropolitan performance. "Her presence on the stage, the breadth and nobility of style, the largeness of utterance, the depth of feeling and the epic manner which the 'Ring' demands," roused the audience to a series of curtain calls for the best loved contralto of musical annals.

Fritz Reiner, conductor of the Cincinnati Symphony Orchestra, will go immediately at the close of its season for a short series at the Royal Opera of Budapest, after which he will conduct a season of two months at the Colon Theatre of Buenos Aires. South America is more and more drawing its operatic talent from the opera houses of the United States.

FRITZ REINER

Herbert Forrest Odell, editor and publisher of the *Crescendo,* and for many years a leading teacher and advocate of the popular stringed instruments, died recently at his home in Boston, in which city he was born in 1872.

Dr. Henry Coward, the eminent British conductor, is a fine specimen of the musician of purpose. Starting to earn a living at nine in a cutlery warehouse, by dint of hard study he qualified for the teaching profession, became a schoolmaster; but, as music had been always his greatest love, at thirty-nine he embraced it professionally; a few years later obtained the degree of Doctor of Music from Oxford, and now is to receive the "Freedom of the City" from Sheffield, where he was born.

"Mr Pepys," a ballad opera with "the world's most famous diarist" as the central character, has made quite a stir by its production at the Everyman Theatre of London. It is really a "chamber opera" for a small stage and with an orchestra of only eight players of strings and woodwinds. Clifford Bax created the libretto and the musical score is by Martin Shaw. The music and lyrics fit so neatly that the Savoy operas are said to be recalled without hint of Gilbert and Sullivan imitation.

A Prize of Five Hundred Dollars, donated by the Austin Organ Company, and a Gold Medal offered by the National Association of Organists, are offered for the best organ compositions submitted before June 1, 1926, by composers of at least five years' permanent residence in Canada or the United States. Particulars from The National Association of Organists, Wanamaker Auditorium, New York.

"The Immortal Hour" by Rutland Boughton is to have its first performance in America on April 5th, by the Opera Players' Club at the inauguration of their new Grove Street Theatre, with Joyce Borden in the leading rôle and Alberto Bimboni conducting. It has been running for two months at the Kingsway Theatre of London with seats booked weeks in advance. Previous to this it had had two seasons of six months each at the Regent Theatre.

C. S. SKILTON

"The Guardian Angel," an oratorio by Charles S. Skilton, was given public performance for the first time on March 24, during the Convention of the Kansas Federation of Music Clubs at Lawrence. A chorus of two hundred and fifty voices, augmented by a children's chorus of three hundred, and accompanied by the Kansas City Little Symphony Orchestra, all under the bâton of Alfred Hubach, interpreted the work.

The Eastern Music Supervisors met at Atlantic City on March 10, 11, 12, for their ninth Annual Convention. Eminent speakers and authorities addressed the meetings and led the round tables, and a forward step was taken in the development of Public School Music.

"LEADERS" IN MUSIC PUBLICATIONS EACH AN OUTSTANDING SUCCESS IN ITS CLASSIFICATION

OVER 10,150,000 COPIES REPRESENT THE ENORMOUS SALE OF THESE WORKS

SCHOOL FOR THE PIANOFORTE

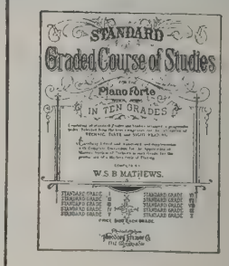
IN THREE VOLUMES BY THEO. PRESSER

Volume Two STUDENT'S BOOK

Volume One BEGINNER'S BOOK Price, $1.00 each

Volume Three PLAYER'S BOOK

The Most Popular of All Modern Instruction Works for the Piano



"Beginner's Book" is a veritable "first reader" for the piano. Thousands of teachers enthusiastically state that it is the best of elementary instruction books for young students. "Student's Book" and "Player's Book" are also very popular because of their value as educational works covering the stages following the "Beginner's Book." Throughout this school the material is attractive and pleasing and the teacher is enabled to achieve speedy results in a thorough manner.

STANDARD GRADED COURSE *of* STUDIES

FOR THE PIANOFORTE
In Ten Grades—Ten Volumes

By W. S. B. Mathews Price, $1.00

An Unequaled Educational Work for Piano

This is a complete, progressive series of the indispensable studies for the piano from the very beginning to the highest grade. It is a convenience to teachers and a great advantage to pupils. Except for young pupils, study can be started with the first book. Where the pupil is young, however, it is well to lead up to this course with the "Beginner's Book."

SUCCESSFUL TEACHING WORKS FOR VARIOUS GRADES of INSTRUCTION

TOUCH AND TECHNIC—By Dr. Wm. Mason—In Four Parts - $1.00 ea.
One of the most remarkable works in the entire range of piano pedagogy. A school for artistic piano playing highly endorsed by Paderewski, Joseffy, Grabrillowitsch, Liszt and others.

MASTERING THE SCALES AND ARPEGGIOS—By J. F. Cooke - Pr., $1.50
Scale study from the beginning to the highest degree of proficiency.

SELECTED CZERNY STUDIES—By Emil Liebling—In Three Volumes - $1.00 ea.
Extensively used because these volumes give the best of Czerny's wonderfully helpful studies arranged in progressive order. The editing, fingering and annotating are masterly.

COMPLETE SCHOOL OF TECHNIC—By I. Philipp - Pr., $2.00
A compendium of modern technic. Excellent daily practice material.

NOTE SPELLING BOOK—By Adele Sutor - Pr., 50c
An unusually successful work. The young student is instructed in notation in an entertaining manner.

FIRST GRADE STUDIES—By L. A. Bugbee - Pr., $1.00
Exceptionally attractive material for use after the first few rudimentary lessons.

ADULT BEGINNER'S BOOK—By C. I. Norcross - Pr., $1.75
These are "suggestive studies for music lovers." An excellent manual for the intellectually matured piano student.

House Cleaning

SPRINGTIME is house-cleaning time.

But, Springtime is usually the harvest time of the music teacher. He has no time for the confusion of cleaning.

The result often is that the musician escapes the beneficent yearly upheaval of the housewife, the cascades of soap and water, the tide of fresh paint, the bang of the carpenter's hammers and the swish of new hangings.

Summer comes. The music teacher is tired and seeks a vacation. All too soon the Fall arrives and, with the rush of the new season and a thousand and one important professional and business duties, the studio is "cleaned up a bit" and that is all.

Really, Summer is the normal house-cleaning time of the teacher. It is the time to refurnish the studio, paint up, clean up, sort music, catalog the library—in fact, to make the music room so that it will shine and bespeak the good taste and initiative of the teacher.

It is not a bad plan to turn things around so that the room has a different aspect when the pupils arrive at the opening of the new season. The time to think about it is now. New pictures, new decorations, new paint, new books, new music, new wall paper, are quite as good investments for the teacher as they are for the business office or for the store.

One important investment is a good music cabinet. Nothing can give the pupil quite so injurious an idea of the teacher's lack of system as a poorly cataloged music library. It is a poor thing for the teacher to talk of method and order and then spend ten or fifteen minutes of the pupil's time in hunting for a piece of music which should have been immediately located. A good modern music cabinet is always a fine investment—no modern business man would attempt to do business without proper cabinets or files.

In fact, the progressive teacher will make it a point to have the "On Sale" assortment of music not only in the studio some weeks in advance of the opening of the season but also so classified and identified by frequent playing that when the pupil comes there will be no room for uncertainty in what materials to use.

The teacher who buys at the very last moment the music necessary to supply the pupil's needs makes a serious business mistake, because by the modern system it is possible to have the music available at the time when it is most desired.

Any progressive dealer is only too anxious to discuss the teacher's needs by correspondence or in person when possible. There is no excuse for the teacher who dodges the Summer house cleaning and adequate preparation for the Fall music season.

Sentiment

SOME months ago in a conference with Mr. Charles M. Schwab, the "Steel King," laid stress upon the value of sentiment in life. Incidentally he said that he had found most men of great accomplishment to possess sentiment of the sincere kind in very marked degree. He stated that John Pierpont Morgan, supposed by many of the unknowing public to have been a kind of financial iceberg, would literally melt into tears when he witnessed human suffering.

Greatly to our surprise we learned after the death of the Founder of THE ETUDE that, because of his great business success, many who never met him thought of him as a hard, cold, grasping man. Quite the contrary was true. Naturally, if he suspected that anyone was trying to take advantage of him, he was thoroughly capable of defending himself. On the other hand his liberality was boundless and immediate, when he ascertained that those who dealt with him were coöperating in the proper spirit. He was sentimental to a high degree. In looking over some of his personal effects we found a little faded envelope filled with some leaves. A note enclosed read:

"*Leaves I Picked at the Grave of Chopin.*"

Mr. Presser was extremely sentimental and the great barricades of flowers that appeared at his funeral were mere visible evidences of past kindnesses reflecting the fine character of the man.

Opera In-Comprehensible

BANDS of enthusiasts, in Chicago and elsewhere, are waging a war for opera in-English as against opera in-comprehensible.

Outside of England and the United States, most of the operatic centers of the world demand that their opera shall be in a language they can understand. There may be some excuse for opera in South America in Italian, because the similarity of the Latin tongues gives our Latin-American brother at least a cue to what is happening beyond the prompter's box.

In Italy and France, Wagner is almost always given in the Latin tongues, precisely as Verdi and Puccini are given in German in Germany.

English is apparently taboo in opera for no other good reason than that which perpetuates pounds, shillings and pence, in England, and pounds and ounces in America.

Surely it is not because of the English language itself; for the language of Shakespeare, Milton, Poe and Kipling is a rich, sonorous, forceful tongue, possibly not as mellifluous as Italian, as piquant as French or as ponderous as German, but, withal, an excellent language for singing. All singers know this and are glad to sing in the vigorous, elastic and orotund tongue which is used by more people than any other speech in the world.

Opera, in America, is apparently designed for three select groups:

Professors of languages,
Court interpreters,
Waiters.

As far as our experience goes, these are the only classes of our citizenship with enough linguistic glibness to comprehend the polyglot musical performances given in our opera houses. In most of the older operas it really does not matter because the libretti are so absurd that some kind of linguistic veil is the one thing which will save the performance from becoming a hilarious farce. Some of the modern libretti are, however, powerful dramas which cannot be fully appreciated unless the words accompanying the action and the music are understood.

But the mere translation of an alien text into English is not all that is to be desired. After the translation comes the delivery of the words through song in the opera house. Much of the operatic diction is so bad that its meaning is lost in any language. Mr. Charles Henry Meltzer, one of the most respected of American music critics, who has done more than any other one man to help in the cause of opera in English by translating libretti in excellent fashion, spoke in favor of his cause at a huge luncheon given recently by the Philadelphia Music Club. Although renowned in his own field, he has not the gift of addressing large audiences. The result was that, although he spoke in excellent English, to an English speaking audience, his address was given in such a low tone of voice that only a comparative few really heard what he had to say.

Unconsciously he exposed one of the great weaknesses in the plan of giving opera in English. To be really effective the singers must deliver the text so that the meaning of the words may be comprehended at all times. The size of a great opera house makes this a tremendous task. Of course no musical comedy would exist for more than a few nights if the audience did not get at least ninety per cent of the words spoken or sung; but musical comedies are given in auditoriums one-half or one-third the size of the metropolitan opera houses.

Oh, well, reforms are slow and tedious. Perhaps our grandchildren's children will be able to attend the opera and not go through the comedy of appearing intelligent when not one word in a thousand has any more significance to them than Choctaw. Incidentally, the introduction of understandable words will keep more tired business men from falling asleep in the middle of the second act.

A Store-House of Melody

The art of appreciating good tunes is something which one might assume needs little of teaching and no encouragement. We are living, however, in an age when melody, apparently, is expected to take a second place to what is known as atmosphere. This atmosphere very often proves to be nothing more than a pall of smoke which obscures the natural beauty of the art, but unfortunately does not obscure the incompetence of the would-be artist.

Thus it comes that discords are accepted for great achievement, while well-turned, sanely-balanced "airs" are avoided. The charms that one finds in the beautiful passages of Scriabine, Stravinsky, Ravel, Debussy, Moussorgsky, and others, are decidedly the charms of lovely original melodies.

We feel that it is an exceedingly good thing for the student to get acquainted with as much melodic music as possible. The old operas of Glück, Mozart and their contemporaries are full of exceedingly beautiful melodies. Another storehouse of exceptionally fine melodies is to be found in the "Light Overtures" which may be procured in collections for piano solo at a slight expense. "The Marriage of Figaro" of Mozart, the "Orpheus" of Offenbach, "Pique Dame" of von Suppe, "Mignon" of Thomas, "Jubilee Overture" of Weber, all form excellent musical educational material when considered from many aspects. They do not, of course, rank with Bach's *Fugues*, Beethoven's *Sonatas*, or Chopin's *Nocturnes* in the loftiness of their appeal, but there is really nothing quite like them for the study of rapidly changing metre, tempo, rhythms and styles of melodies. We recommend them very highly for their specific pedagogical value. Music teachers will find them very productive of good results in the cultivation of certain phases of musicianship, and especially in that important quality of instant adaptability. Moreover they form very sprightly entertainment for leisure hours.

Hands

If the human animal had been born with claws or hoofs instead of hands with their ten marvelous digits it is hardly conceivable that art could exist. Musicians, who are dependent upon their hands for their support, often give entirely too little attention to the marvels of this organ.

The hand is one of the distinguishing characteristics of man. Monkeys have prehensile hands and can do astounding things with them. Man, however, is the only animal that does not use the hands as a means of locomotion as well as for other purposes. Thus the human hand is developed to a much higher degree.

The twenty-seven bones, the bundles of ligaments and muscles are the human tools by which Michelangelo, Pericles, Sir Christopher Wren, Chippendale, Whistler, Rodin and Sargent have given their masterpieces to plastic art. The great writer can dictate his thoughts but it requires human hands to get these thoughts expressed upon paper so that you can read them in print or script.

The musician's hands are probably the most highly developed of all hands. They are trained to a condition of sensitiveness and disciplined to a degree of control hardly equaled by any other artist. The painter, for instance, can apply his crayon and his colors to the canvas with all needed deliberation. The pianist must often make his tonal interpretations with the rapidity of lightning and with an accuracy of the most delicate scientific apparatus, and yet with a sensitiveness for color and for expression upon which the artistic value of his work largely depends.

Maurits Leefson

In February Maurits Leefson died in Philadelphia.

In a wide international experience, meeting the most eminent teachers and performers for a quarter of a century and discussing with them all manner of teaching problems, we have rarely known a teacher who had greater personal gifts for laying the foundations for fine technic and fine tone.

Unfortunately Leefson's teaching was something which could not be communicated completely through books. It was the man himself—the personal contact with the extremely thorough, painstaking, keenly artistic teacher which produced the results.

When his pupils entered prize contests they won so frequently, even in the great national events, that his ability as a teacher became more and more obvious.

Leefson had one serious shortcoming in so far as making a very great name as a teacher. He was by nature very modest and retiring. He loved his work and conducted a certain limited amount of publicity altogether incommensurate with his real worth as a teacher. It was with great difficulty that we induced him to set down certain principles of his teaching work which we later published in The Etude for November, 1925. We were not surprised that a very large number of our readers recognized the worth of this unusual article and wrote us about it. Leefson told us that this was the first time he had been able to get into print to his satisfaction his ideas upon this important subject of preliminary training of the hand. We rewrote the article with him several times in order to get it just as he wanted it. He was not a writer and was very glad to coöperate in this way.

His art now rests with his disciples. We keenly regret that his modesty prevented him from exploiting his skill and knowledge. A biography of Mr. Leefson appeared in The Etude preceding the article to which we have referred.

He was an enthusiastic worker for the cause of his fellow music teachers and had many firm friends.

Monkey Music

One of the most extraordinary books that has ever come to our attention is "Chimpanzee Intelligence and its Vocal Expression," by Robert M. Yerkes, Ph.D., and Blanche Learned. The latter author has gone to the extent of presenting in over three hundred notation examples the noises made by a youthful chimpanzee. Although these are shown on different degrees of the scale, giving the reader the impression that the noises are musical, the editor's own experience with chimpanzees at close hand is that they do not sing but that there is a great variation in pitch in the intonation of their "spoken" sounds.

The remarkable thing is that the chimpanzee utters his noises with quite distinguishable vowel color—mostly Ooo, ah and ee. More than this, he will create very distinctive rhythms. The author is to be complimented for her patience in collecting this material; but there is really little in the book that could be used as "leit-motifs" for the great music drama of the future, "The Saga of Tennessee." Readers who want to learn more about monkey music can secure the work from the Williams and Wilkins Company at Baltimore.

Master Lessons

Over ten years ago The Etude commenced its notable series of Master Lessons on Famous Compositions by Great Artists. During the coming twelve months this splendid feature will be greatly amplified.

THE ETUDE has the honor to announce a very important series of practical educational articles of the greatest interest to all lovers of the pianoforte. Professor Corder will discuss the best known of the Beethoven Sonatas. With his keen, penetrating mind and wide experience, these articles will be rich in musical interest and exceedingly helpful.

BEETHOVEN PLAYING AT THE HOME OF THE SHOEMAKER, FRANZ

FREDERICK CORDER has been Professor of Musical Composition at the Royal Academy of Music since 1886. He has composed extensively in the larger forms and has written widely used books on Musical Composition. Many of the most distinguished British composers of the present day (including Granville Bantock) are among his pupils.

Beethoven's Piano Sonatas, and How to Play Them

By the Distinguished Educator

FREDERICK CORDER

Professor at the Royal Academy of Music, London, England

ROM time to time much has been written in THE ETUDE on this subject and I cannot hope that I am contributing the last word; but as I learned the whole of the Sonatas in early youth ve been hearing and teaching them ever since—and eans for over half a century—I do claim to speak me authority upon a matter of great importance to upil and pedagogue. The musician who does not he Sonatas of Beethoven proclaims him or hermere trifler; the would-be pianist who does not t least eight or ten of the thirty-eight or so is not to get far. Why? Because in these works we ot only noble music—that is a matter in which ay be left to its own judgment—but also music demands all the performer's skill without taxing irly. In using these pieces the teacher must natuxercise discretion and not treat the volume as one urney to be toiled through, as the unthinking are do with volumes—even the Holy Scriptures—if y say so without irreverence. Teach single move- by all means, to those whose age or technical ss renders the whole work unsuitable. For a you must know, is usually a set of three or four e pieces, with little or no relationship between ave that of key. But it will be most to the prespose to take each complete Sonata and survey it l.

Sonata No. 1, in F Minor—First Movement

general character of the music, conveyed by idden changes of tone, and numerous *sforzandi*, ue and impetuous; a favorite mood of Beethoven. that the opening measures are all *piano*, there be- *crescendo* as the passage rises; though one is in nearly all modern editions. One must always er that Beethoven was a law unto himself in these , and knew the value of the unexpected better yone before or since. The unexpected ff. is all re startling for this reticence. In measure 10 I harm in letting the idle right hand play instead left which, in return, can relieve the right hand accompaniment notes in the next four measures. nce for all, I bid the teacher remember that in composers you seldom find any attention given most convenient distribution of the notes between ds. In a mistaken reverence for what they deem ibtle intention of the composer, people often put ves to unnecessary inconvenience in order to play ge as it *looks* on paper. We shall find, as we numerous examples of this error.

A Pet Device

E the sudden p in measure 35. Do you know w to produce this without making any *diminu*front of it? Very few people do, and I must tell you, for it is one of Beethoven's pet devices, which he employs in the most unexpected places. This is one. In spite of the slur, indicating a smooth *legato*, you must make the tiniest of possible breaks—thus:

Ex. 1

Do this a few times quite slowly, when you will find no difficulty in hopping off a loud G and coming down lightly on a soft F. Fancy in your mind that the keys from G onwards are suddenly found to be too hot to touch, but that you must on no account interrupt the passage. Then gradually increase the pace until you can do it up to time without the break being perceptible.

The ability to change the tone instantaneously from *f* to *p*, or even from *ff* to *pp*, should be assiduously cultivated; it is indispensable to the proper rendering of Beethoven.

In the middle part of this movement the explosive *sforzandi*, sometimes in one hand, sometimes in both, can hardly be overdone; they maintain the character of savage energy which continues to the end. The trills in 85-88 are to be played with the upper note first; you will then just be able to get in three notes to each eighth-note for the left hand. Observe that on the return to the first subject this is now *forte*, and there should be no *p* in measures 107-8. The angry mood has now gained such power that Beethoven does not want to weaken it. Notice the difference in effect between this climax and the corresponding one at measure 7.

BEETHOVEN PLAYING THE MOONLIGHT SONATA

This Contemporary Print Doubtless Led to the Fictitious Story of Beethoven and the Blind Girl

At 140, and also at the similar point 41, the music is marked *con espressione*. (Beethoven actually wrote *con passione* the second time.) What do you *do* different to what you have been doing all along? You cannot have been playing *without* expression: that is not playing at all. And, anyhow, expression is not a kind of slop that you ladle out as required. What ought you to *do* when you see this direction: what does the composer expect you to do? He knows, and I know; but nobody ever troubles to explain, though it is really very important. You are intended to make the melody stand out in all possible contrast to the left-hand accompaniment, to which end the character of the two must differ as much as possible. So what you actually *do* is to play with a heavy *legato* in the right hand and a light *staccato* in the left. Many people will deem this explanation unnecessary, saying that musical instincts should be your guide, but the real teacher will know better. Reason is better than instinct any day.

Misleading Harmony

TOWARDS the end of this movement (140-2-4) I find pupils very apt to play D naturals in the bass instead of flats, in spite of the key signature. They are misled by the harmony of the corresponding passage (41-43-45). You had better write in the flats.

I make a point of teaching every pupil the second movement of this Sonata. There are few technical difficulties, and it affords an excellent practice in Grace-notes, the Turn, or Grupetto, occurring in every possible form. And as the sign ∾ employed is of variable meaning, it does not appeal directly to the eye, and so causes endless trouble to those who read only with that organ. To put, as many editors do, the translation into real notes at the foot of the page, is quite useless: the eye cannot be in two places at once. Explanation is never a thing to be ashamed of; but many people think that to alter the *look* of music is somehow to alter the music itself. Can any unprejudiced person say what harm there would be in writing the opening measures of this movement, for instance, thus

Ex. 2

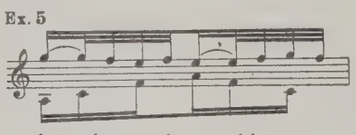
etc.

What? You see no difference? That is just what I say: there is none, except to the comfort of the reader. But any classical-minded editor would have a fit if he *saw* it printed thus. Why, when Kroll printed Bach's 3rd Fugue in D instead of C there was such an outcry of horror that he had to cancel the edition and put his version at the end of the volume. Just make the experiment yourself. However well you may know the work, it will always be an effort to play the ornaments correctly from the original notation, while there will be no need to hesitate if you have them indicated as above.

In the 7th measure we find the grupetto sign placed over instead of after a note. However carefully you may have learned your "Rudiments," you will find this, as well as the turns in measures 9 and 11, to be puzzling, owing to the three varieties of this ornament all being indicated by the same sign. To add to your perplexities there is one place at the end of the 18th measure—where the composer has probably written not what he intended. According to rule, Ex. 3 (a)

Ex. 3

should go as at (b); though the passing notes clash sadly. I cannot help thinking that Beethoven must have intended the far more euphonious version



Ex. 4

which, indeed, I have often heard played by the really musical who follow their ears rather than the letter of the law. It is just another instance of how composers used to regard notation as only an approximate indication of their intentions.

Presently we meet with altogether another kind of difficulty. This is a slow two-against-three passage. Those who have not achieved the independence of the hands will never play this decently, and I advise them to modify boldly the right hand part thus,

Ex. 5

which is at least better than making a mere muddle of the passage. Those who have patience and determination to overcome a difficulty instead of shirking it will play the first group of four (r. h.) and the first group of three (l. h.) alternately, first quite quickly and then at the proper speed. When this can be done without hesitation, then try the two together as fast as possible, so that (as in Chopin's *Fantasie Impromptu*) the hands have not time to upset each other. Then gradually relax the speed, always endeavoring to think only of the *first* note of the group, until the right hand ceases to want to divide up his four with any subordinate accent. This seems very complicated when you read it, but is quite simple in practice.

The Correct Pace

ONE other passage in this movement needs attention. In measure 56 we find ourselves suddenly confronted with very quick notes—six to the beat. Start in the latter part of the preceding measure counting "five *and* six *and*" to the group of left hand notes, and it will give you the correct pace of the passage. But this is not all. The triplets are played by the alternate hands, commencing left, right, left, right, and then right, left, the rest of the way. If you will mark the first groups R. L. R. L. with a pen (neatly) you will be surprised at the gain in facility and rhymical clearness.

The third movement—*Menuetto*—is a very simple and pleasing one; but there are two unexpected difficulties. The *appoggiature* in the 11th and 13th measures—also in the 19th and 21st—are meant to be played exactly like those in 23 and 25. Beethoven only relapses into common-sense notation in these two measures in order to indicate a greater degree of smoothness; but you are supposed to know that an *appoggiatura* is (or rather, *was*) written as if it came before the beat but always played upon the beat.

The other difficulty is a matter of dividing the notes better between the hands. In the second part of the *Trio* the right hand has a passage of 4ths which it is impossible to render smoothly. Beethoven apparently thought it unwise to give the left hand 3rds to play, though this would have been easier. Suppose you try it this way.

Ex. 6

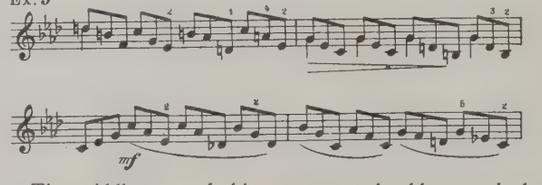
Once the unfamiliar appearance of the passage is got over, I think you will find it quite easy to play with the desired smoothness and speed. Then copy it neatly on a slip of paper and gum it into your own copy. That is the only way to make sure of doing it.

On no account omit to repeat the *Minuet* after the *Trio*.

The *Finale*, though marked *Prestissimo*, can hardly be played at a really furious pace. The five-note chords will usually be found too much for a small hand, but the lowest note may be omitted without much loss of effect. Here is a better fingering for the left hand than the one usually given, it avoids using so much thumb.

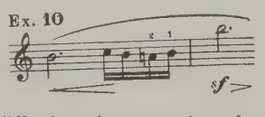
Ex. 7

It is not possible to play trills in measures 10 and 11; the speed is too great. Mere turns must suffice, thus:



Ex. 8

By the way, most editions have measures 10 and 11 alike; this is incorrect, Beethoven marked the *tr.* only in 11.



The two-against-three passage, which follows presently, offers no difficulty in evenness, because of its rapidity, but it is well to use the 2nd finger of the right hand instead of the 1st, in places.

Ex. 9

The middle part of this movement should go a shade slower, so as to sound leisurely, in strong contrast to the hustle of the other portions. When you come to the three turns on C, B and A do not be afraid to finger them all alike, thus:

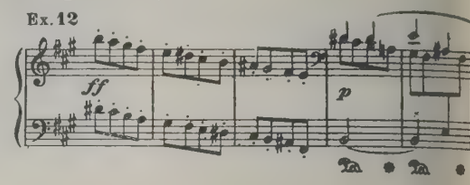
Ex. 10

There is no difficulty about turning the thumb under onto a black note; and we have long got over regarding this as a crime.

For the final 8 measures go full speed ahead; and finish off with all you can do in the way of brilliancy.

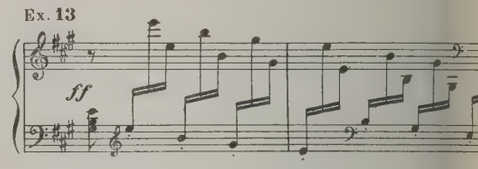
Sonata No. 2, in A Major

THIS is much more difficult, as a whole, than the preceding work, demanding considerable agility of finger for the first and last movements. Also in this and all the succeeding Sonatas there is much that does not lie under the hands and demands what is known as "fake" or "trick" fingering. This consists chiefly in slipping a finger from one to another and is, of course, a breach of the rules of good fingering. It has to be indulged occasionally, in order to avoid breaking a legato and is mostly needed in double-note part-writing such as we find in Bach; but it is also pretty frequently demanded in the works of Beethoven, as for example, in measures 1 20 of this Sonata.



Ex. 11

There are cases, however, where slipping the fing insufficient help and other means have to be soug



The character of the first movement is large fluenced by the manner in which the first two not played. Very marked accent is called for. M great point of the sudden *p* after *ff* at the 42nd me and let the left hand assist the right hand in th lowing measure, thus:

Ex. 12

At 84 the first note of each triplet was, of cours tended to be played by the left hand; but, as Beet thought it superfluous to indicate this (indeed the method of doing so had not then been invented), used at first to essay the almost impossible ta playing it all with the right hand. The proper w write it is

Ex. 13

but to this day nobody has dared to do it. The might understand it; and where would the poor te be then?

At 104 you will need a deal of trick fingering, are to keep the melody and the rising scales *legato*. I must leave you to work out this puzzl yourself. Mind the sudden *piano* here!

Crossing Hands Difficulties

IN THE middle section of this movement at 138, and others, broadly built persons will be able to cross hands to the extent demanded. can be no objection to exchanging hands, if it be neatly and in the middle of a measure.

The passage of canonic imitation extending fro to 198 is very difficult, especially for small hand would at least have *looked* easier had it been w thus:

Ex. 14

The small notes of the original, intended as a h the performer, are only a hindrance. A normal is forced to break the 10ths; but this is not des and should therefore not have been indicated.

In the *Scherzo*, in order to give the charact playful lightness, the rests must be well observe the chords played crisply. I cannot see that it be a sin, when the theme comes in the bass, to c over the work of the two hands. The movement certainly get better played, and that is the chief is it not?

It is hard to maintain the light and graceful cha of the *Finale*, through its many difficult passages. arpeggio, which is like the flourish to an ornan initial letter, gets more elaborate at each repe Where it is divided between the two hands the does not want to be made evident, if it can be h The middle subject, with its staccato triplets, oug be very noisy. Many people try—and fail—to mak last chord in each measure come *after* the note i treble, but in Beethoven, Schubert and Mendelssoh fact, up to quite modern times—composers nearly a

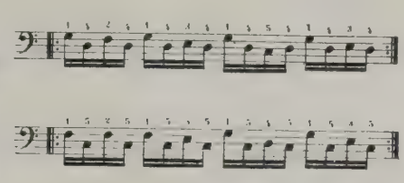
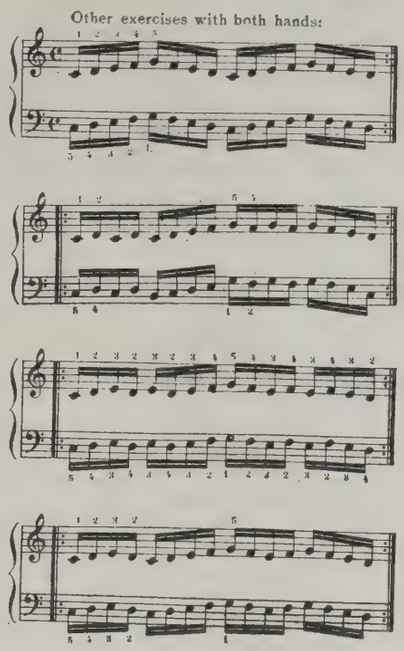
and then with the left:



Ex 5



Combinations of Three Fingers

Ex.6

Other exercises with both hands:

Next practice trills at the imaginary keyboard with all fingers methodically; 1-2, 2-3, 3-4, 4-5, then combine them in various ways as: 1-3, 1-4, 1-5, 2-4, 2-5, 3-5, and trill incessantly, first slowly and then more rapidly.

Then proceed to double note exercises. First in order, thirds, raising contemporaneously two fingers: 1-3, 2-4, 3-5, like this:

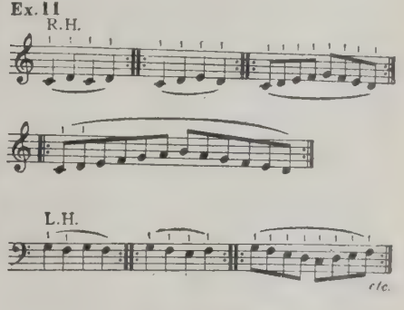
Ex.7

then proceeding to third trills as follows:

Ex. 8

Then proceed to sixths, playing imaginary exercises like these:

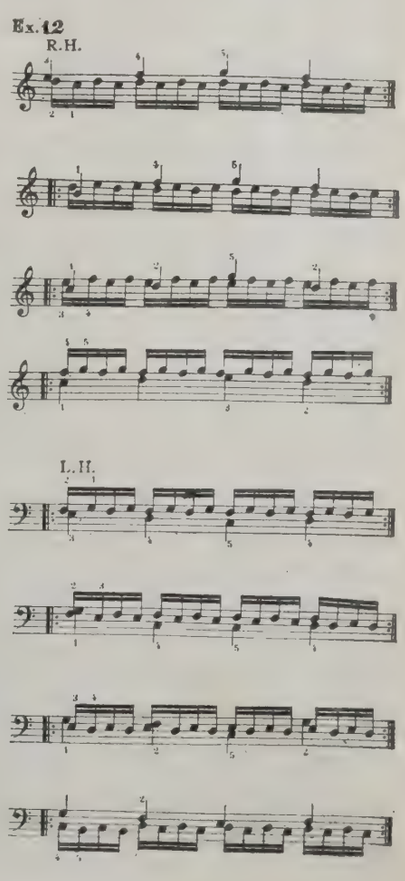
Ex.9



Our program now advances to *legato* octaves, describing in the air or on the table exercises like the following:

Ex.10

Notice here, that the upper notes with the fourth and the fifth can be played *legato*, while the thumb alone has to strike consecutively different keys, preventing a perfect *legato*. But an exercise like the following, all performed with the thumb alone, will ease the task:



Ex.11

Two Part Exercises

The foregoing exercises in double-note playing are indispensable as a preparation for polyphonic playing, in which one hand sometimes has to play two or more parts at once. The following exercises in two-part playing will facilitate the task:

Ex.12

Many of the greatest pianists we have known have repeatedly told us that they have made a practice of going over compositions mentally and at a table when they have had no keyboard at hand. We are sure that Commendatore Pirani's article will prove a helpful asset to music students who are employed in business and who may have a chance to put in a profitable quarter of an hour at luncheon time in practicing upon a desk. Why not? Digital exercise is exercise whether you do it on the parlor mantel or on a keyboard.—EDITOR'S NOTE.

Our instrument, the air or the table, is a patient object. We are, therefore, free to proceed to other exercises with the wrist. What we did with the single fingers we can do with the wrist. Raise the hand independently from the arm, first slowly, and then more rapidly with a trembling, yet always controlled motion, as follows:

Ex. 13

first with the right hand, then with the left, and finally with both hands together, in the beginning, light, with relaxation, and then more substantially. This will give an excellent wrist practice.

But this is not all. We must practice also the whole arm, because *staccato* passages in octaves and in chords are not limited to wrist, but often require the use of the whole arm.

Therefore, we can repeat all the exercises given above for the wrist, using now, instead, the whole arm, that is, making the staccato from the elbow instead of from the wrist, a kind of staccato which brings forth more strength and power. Here also the motions should be in the beginning slow and well controlled, increasing afterwards in speed and velocity the oscillations of the arm from the elbow.

I have given you in a nutshell a complete method of piano playing away from the instrument, which renders you totally independent of time and space. You can laugh at your tyrannical landlord, who prevents you, through an ironclad contract, from practicing in the morning before 9 o'clock and compels you to stop at 10 P. M., and not touch your piano at all Sunday under penalty of expulsion. You can allow your wife to snooze sweetly in the morning hours without being disturbed by the jingling and the tinkling of your clavicymbal. In a word, you are unrestrained like the bird in the air. You do as you please and when you please.

And do not believe that this kind of practice will not benefit you. Try it and, after having done it conscientiously, you will see that your fingers will feel inclined to run away alone, as if they would not belong to you; an unruly behavior which, of course, must not be allowed!

I had the privilege of passing many days with Rubinstein, as I was in Petersburg (changed afterwards into Petrograd and lately Leningrad!) and, during our long conversations, he never stopped from performing with his fleshy fingers all kind of exercises like those mentioned here. I called his attention to that and he answered that he tried to "improve his technic," which, of course was said in joke, as Rubinstein's technic was insuperable. If the "prince of pianists" found useful those exercises, surely we may safely imitate him!

Now, my dear friends, I have made you a present of a dainty, useful "dummy keyboard" for your exercises, and I expect you to send me in return something nice in the way of practical results from it.

Vitality in Practice

By Austin Roy Keefer

It is almost useless to practice, or rather merely work the fingers, unless one is wide awake. Being wide awake means that every function of the body is striving keenly and steadily to perform its work, the fingers, like little dancers, full of vigor and activity, the wrists as light as air, the whole attitude one of alertness and comfort, wherein nothing worth hearing, seeing and feeling is missed. Every tone must live, must speak with a voice full of meaning!

"I Am Music"

By Berton Bellis

I am the song of the Universe.
I am the gurgle of the sparkling, silvery brooklet, the monotone of falling waters of the mountain stream, the dance of the rain on a lonely cabin roof.
I am the patter of children's bare feet on a city street that offsets the full clamor of busy commerce.
I am the harmonies of the earth and celestial bodies.
I am the voice of the reasoning power of the eternal love of God.
I am the unspoken, unarticulated voice of love.
I am the siren of the Universe.
I am the spirit that breathed the happiness of the Universe into existence.
I am the wooing voice that brings peace and order out of wreckage and chaos.
I inspired the Songs of Solomon and Psalms of David.
I am the wordless, winning voice of the Almighty, the Eternal God.
I am the paradise of deep love in human feelings and emotions.
I both inflame and soothe.
I furnish comfort to the aged who has lost a life mate—and bring sweet dreams of yesteryear and childhood.
I lull peaceful babies to sleep and excite warriors to battle.
I soothe the vanquished in defeat and cheer the victor in success.
I congratulate the proud parent at the birth of a child and soothe him when one has passed to the Great Beyond.
I was the inspiring notes from the harp of old, blind Homer, and aided him in composing his immortal verse.
I deeply touch the world with shame for the way they have treated past great masters, such as Mozart in the garret, and others.
I furnished cheer and comfort to my patron saint, Dante, in his miserable exile.
I utilize the crude harp of the child, the coarse bagpipe of the Scotch highlander, and the magic flute of the hillside shepherds.
I melt audiences to tears through lovely lips and with drum and fife I scale the Alps.
I am purity—truth—wholesomeness and you when your heart is true and your soul is merry.
I am the promoter of art and enlightenment.
I am the kind words of admonition from a loving father to his son.
I am the thoughts of an artist who works only for the betterment of humanity—and forgets himself.
I am the devoted lover speaking wooing words of magical fire to his soul mate.
I am the sweetest and most enchanting chord that touches the human ear.
I am the beautiful voice of love that a mother sings to her babe.
I am that hypnotic—something—that man can feel but cannot see, and I am free by the grace of God to both king and peasant.
I am the tamer of wild beasts and soother of the savage breast.
I am the inspiration of the human soul that radiates from the stringed instrument of Pan, by lovers of beauty and mankind.
I am the human soul in action and in tune with the omnipotent infinite.
I am the chimes of the combined merry laughter of children.
I am the bitterness and salt in the maiden's tear, or the illuminating sunbeams from her soul in her laughter that rings with love.
I deeply touch the heart and soul and am deeply felt by both friend or foe.
I am the song of the poet interpreted into the songs of ages.
I am poetry in harmony with God and the inspiration of the infinite Universe.
I am the heavenly chord that enchants and entrances the human soul.
I am the euphonious chords whispering through the summer zephyrs in the unpruned natural wildwoods.
I am the charming fascinator of the happiness and inner deep feelings of nature's expression.
I furnish music at the awakening hour in the song of the robin from the heavens and echo the voice of paradise at eventide in the super strains of the nightingale.
I supply your good-night anthem in the nightly carol of the grasshopper.
I am the sweet lullaby at the cradle and the hymn of God's eternal peace at the grave.

"I AM MUSIC"

Silent Practice

By Charles Knetzer

Did you ever hear of anyone aspiring to become an elocutionist who considered it sufficient merely to read silently to himself? Or did anyone ever presume to become a golf player by studying the rules without actual participation in the game? Neither can one presume to become an efficient violinist by substituting silent practice for the strenuous physical exertion requisite for the training of one who expects to master the art.

There are some great musicians, indeed, who resort to silent practice when they have no access to an instrument, but these are accomplished players with a finished technic, which needs but a little polishing to bring it up to the mark. This is entirely out of the question with a beginner with untrained mind and muscles. No one ever became an expert performer on any instrument by merely studying the theory of music.

Yet, we cannot deny the fact that silent practice has its advantages, when, for instance, there is a sick person in the house who cannot bear the sound of an instrument, or when someone is engaged in work which requires close concentration. Beginners, also, may find it helpful to hold the violin against the body, as one would hold a mandolin, and finger an exercise with close attention to spacing the whole and half steps. In doing this, however, care must be taken to curve the fingers and wrist properly, and to let the fingers fall with a firm and vigorous action.

Silent practice may indeed be helpful at times, but it can never produce the results of actual practice on the instrument, nor should it be indulged in when body and mind are exhausted. For worthwhile practice the student must be in good condition, both physically and mentally.

There is no short cut to success in violin playing. Only a most assiduous practice of scales, chords, finger exercises, double-stops, chromatics, harmonics, grace-notes, trills and the tremolo, to say nothing of an infinite variety of bowings of shading and tone quality, will help the student to overcome the difficult problems of violin playing.

The Study of Scales

By S. C. Gilson

Opinions as to how to practi scales vary, but they all lead to th purpose, to produce even, clear ton

The pupil may at first be given a variety of exercises for the thumb p under the other fingers, to be done away from the piano. When the can pass smoothly, we then take "two finger scale."

		4		4		4		4	
		3		3		3		3

	C	D	E	F	G	A	B	C	an
		2		2		2		2	
		3		3		3		3	
l. h.	1	4	1	4	1	4	1	4	

Next step is the "three finger sc

r. h.	1	2	3	1	2	3	1
	C	D	E	F	G	A	B
l. h.	1	3	2	1	3	2	1

Also exercises for the thumb passing the fifth finger are given, but shou omitted if much strain is caused.

After these exercises are fairly ma the diatonic scale is introduced wi regular fingering at first with se hands and in strict *legato*, using firm sure touch (if the fingers are strong)

Later, as the pupil takes the sca different forms, he may practice th ferent touches:

(1) Playing legato, finger staccat wrist staccato, with wrist low, fingers to keys.

(2) Marking rhythm with accent

(3) Starting with slow tempo and ually increasing same.

(4) Playing with different dynam fects. At this stage particular stress be laid on the graduation of crescend decrescendo.

Practicing with eyes shut relaxes t tire body, and while the optic nerve rest the mind and soul can express selves more fully through the mediu hands and fingers.

Speeding Up Sight Readi

By Patricia Rayburn

Sight-Reading is a very importan of a musical education, and the pupil can read at sight will make a much showing and have a more complete of his study than the one who cann so.

It is true some people read at better than others. But after the " of the trade"—such as constantly ke the eyes a measure or two ahead o fingers—have been pointed out, the nothing more important than keen sive practice.

This can be secured by dividing the (consisting of pupils of about the age, who have one class-lesson a w into two teams pitted against each

The idea is for each pupil to through a new piece making as mistakes as possible. Each error c one point against the team of whic player is a member.

A certain degree of interpretation be developed by encouraging the use o pedal, phrasing and so forth, as ne possible in accordance with the pr symbols. Of course, perfection is n be expected, but a steady improve will be perceptible.

At the end of the teaching-year, winning team may be treated to a the party, followed by games and ref ments in which the losers, as consola may share.

"The four necessities of life are shelter, raiment and music."—*Ruskin*

Going to Opera and Concerts in Europe

By CONSTANCE OHLINGER

RIDEAU à huit heures" (curtain at eight o'clock) announce the posters advertising the weekly program of operas to be given at Théâtre National de L'Opéra and at the Comique in Paris. Accordingly everyone hastens n his place by eight o'clock sharp, which means must arrive at the opera house at least a quarter the hour, as it takes some time to check wraps, under no circumstances can be taken into the loges. checking of articles, buying of programs and tip- f ushers (usually women), the audience is settled e evening. In a few moments three loud raps ard back stage, the signal for the rising of the , and the house instantly ceases from its buzz of , the orchestra men quiet down, and all is ready e overture. Thus begins an evening of opera in and if the work presented is a long one, the eve- rns into morning, the curtain falling at twelve o'clock.

Vienna, going to the opera is quite a different Operas rarely or never begin at eight, seven be- usual hour. Long operas even begin at five-thirty o'clock; and this holds true, needless to say, of all the Wagnerian dramas. "Parsifal," I re- r, was presented in one evening and consequently at five in the afternoon.

irst visit to the Staatsoper was to hear "Rigoletto," hall always remember the occasion because of the of certain customs.

even o'clock the rising of the curtain was indicated ell. The audience sat through two acts, followed ng intermission. During this intermission there uch hubbub, of course, people coming and going, ng with their opera glasses from parterre to ceil- id there was also eating and drinking. Every- id it, even the most respectable and élite; and so ed that it was customary to lunch and might be le on the grounds that the opera began so early. Viennese regularly dine at eight o'clock, and it that when an opera begins at seven, the audience unregaled by a substantial meal. Hence the ful opera managers make provision for their g patrons by serving refreshments during the pauses. In the Vorsaal there were counters laden atables, where one could buy anything from enes" (eskimo pie), candies and chocolates, to substantial fare, such as cakes, fruit, semmel with summer sausage, sandwiches, and beer in large glass mugs. Most of the audience flocked e counters for their repast while others remained places to enjoy home made lunches consisting of red bread and sausage.

Cakes and Drinks at the Opera

THE convenience of the latter class, several "Die- " (waiters) went up and down the aisles selling nd various drinks. But what was my surprise, untry where beer is the great beverage, to see a ustling about with a tray, water! "Wasser! Was- ver wünscht hier ein glas " (water! water! who water?) he emphatically . For a few hundred (about half a cent) he serve you a glass of cold and a spoon. Why the n, I do not know, unless it t the Austrians prefer to gulping down cold at least a teaspoon always anies a glass of water). eating and drinking at the t first disgusts one, though while it is accepted as be- ite natural to the atmos- f a Viennese opera house. as are usually out at ten and so run true to d time, the hour of clos- g stated on the programs, Ten, as well as the "Be- ." Thus a good night's available to every opera- who desires it. On the the Viennese system rec- ls itself; for if one as bent on attending several operas and concerts a week, he is not wearied through loss of sleep.

At both opera houses the ushers perform their duties without a "tip," and one may go in without checking his wraps, provided he keeps them on and promises to keep them on throughout the performance. The person who dares venture in, however, without checking is not infrequently caused some embarrassment due to the shouts of "Wardrobe!" which assail him from the attendants on all sides. No coats or umbrellas are allowed to occupy space in the loges by being hung over the chair backs.

As for concerts in Paris they start at any time between eight and nine and in Vienna at six-thirty or seven. Concert etiquette is somewhat different in Europe from what it is with us. In the first place, and as might be expected, the audiences are much more demonstrative in their appreciation than are the Americans. Parisian audiences not only applaud and voice their sentiments by "ah's" and "exquisite's," but they also shout "bravo," "encore" and "bis" (the latter two meaning "again"). And when this fails to bring back the artist they resort to stamping of feet, umbrellas and canes. Encoring an artist is like an enthusiastic outburst of pandemonium.

In Vienna, audiences become just as much, if not more, enthused; but their demonstrations are restricted to applause and cries of "bravo" or "encore," as the *checking* rules are more strenuously enforced.

Hobnobbing with the Artist

AT THE close of the program, the audience, in mass as it were, precipitates itself forward toward the stage and even upon the stage; and when the artist returns to give encores he finds barely elbow room, the piano being engulfed by the crowds that press up close to the keyboard. This marks the beginning of what might be called an informal "encore concert." The artist plays one selection after another, some even at request. Such informal "encore concerts" range anywhere from three to twelve numbers in length. After they have reached generous proportions the janitor turns out the lights, and the audience has to leave. Backhaus, Friedman and Sauer invariably conclude their evening concerts in this way. In another respect, too, concert etiquette in Vienna is different from ours. There it is quite proper to shower artists with flowers; and this is by no means limited to the ladies. The men frequently receive bouquets, wreaths and potted plants; and they always do so with surprising (to Americans) ease and grace. Siegfried Wagner, at his concert in the Konzerthaus was presented with an immense laurel wreath tied with red ribbon streamers, and one or two potted palms, and Vienna's loved master of the piano (Emil Sauer) was similarly honored at one of his recitals. But one pianist received no less than two azaleas, a pot of tulips and three hydrangea bushes! These tributes were placed on the stage during the intermission, and the audience was allowed, or else simply took the liberty of examining them to see what person or organization was the donor. With us, an artist of the sterner sex would be somewhat embarrassed at receiving flowers, but not so in Vienna. They seem to enjoy it and to be even more pleased and grateful than the ladies.

For profusion, however I never have seen anything equal to the flowers received by Jeritza upon the occasion of her first concert in Vienna after her return from America. Three ushers were busy during the whole of the intermission in presenting one bouquet after another, until the entire stage was covered and Jeritza had only standing room left.

Lunching is as common in the concert hall as in the opera, and of course everyone buys his own program. But there is still another institution of the Viennese concert halls and operas which is unique, that is, the "Stehplatz" (standing place). When all seats are sold out or the remaining ones are too high-priced, the peoples' last recourse is "standing-place." My first and only experience going "standing-place" was to a symphony concert directed by Leopold Reichwein. I paid 5000 Kronen for my place (seven cents approximately) and found the "standing-place" not only satisfactory, but very interesting. Standing room is simply a large space at the rear of the hall that is separated from the parterre and loges by a high railing. Just how many places are available I could not guess; though in a crush, several hundred persons might be accommodated. That night, however, there were not many people, and as I had come early I found an excellent place right next to the railing with full view of the stage.

"Standing Place" and "Standees"

"STANDING-PLACE" struck me as being to the present day music halls of Vienna what the "pit" was to the Elizabethan theaters; and its occupants reminded me of the "groundlings." This distinctive section of the house was composed chiefly of music students and amateurs and so occupants of "standing-place" probably knew more about and had a keener appreciation of the music played than all the would-be "swells" in the loges put together. Most of them had scores and followed the performance very intently from beginning to end. During the pauses there was quite a bit of shifting and walking about to ease stiff or tired legs, and the floor squeaked horribly. Several times it happened that persons were still moving about after the conductor had raised his baton, whereupon the critical and offended majority would send up a "shh" that made the culprit stop short in his tracks, while furious eyes glared at him.

With the intermission, while the rest of the house stood to rest, the "standees" if they found anything to sit on, sat. Toward the close of the program I grew very tired, though none of my neighbors seemed a bit weary. As the Viennese say "Es ist wie man sich dran gewöhnt" (it's as one accustoms himself). Much as one may be amused at the habit of eating at operas and concerts, if he ever goes to an opera or concert *"Stehplatz"* he will find some justification for the act, for the "Steher," if nobody else, deserves refreshment.

Among the most spectacular operatic performances in Europe have, of course, been those given at Bayreuth at the Festival Theatre. Wagner very adroitly located the theatre outside of the city proper, so that the pilgrimage idea would be developed. The Wagner pilgrims in the olden days streamed out to the environs in carriages, on foot and in busses. Frau Cosima went out in state, with a magnificent equipage and liveried coachman and footman. The theatre itself was not contaminated with food and drink; but between the acts one strolled a few yards away and ate at the official restaurant, topping off the "Flying Dutchman" with appropriate *Wuerst und Bier*. The atmosphere was impregnated with art and there was in the people a spirit of sweet doing-nothing existing only in a land given over to melody.

FOYER OF THE GRAND OPERA AT PARIS

Self-Test Questions on Miss Ohlinger's Article

(1) What are the peculiar customs of arriving at the opera in Paris?

(2) What are the local customs of Vienna, as to the arrival at the opera?

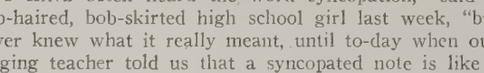
(3) What refreshments are served at the Vienna opera?

(4) What are the hours of beginning the opera in Paris and Vienna?

(5) To what extent are flowers bestowed upon concert and opera performers in Vienna?

Syncopation

By S. M. C.



"I HAVE often heard the word syncopation," said a bob-haired, bob-skirted high school girl last week, "but never knew what it really meant, until to-day when our singing teacher told us that a syncopated note is like a policeman when he is off the beat. I remembered that and resolved to learn something more about syncopation, for I knew you would be eager to explain it to me."

"Certainly," said I. "Now first for the derivation of this formidable word. It is of Greek origin, and means 'intersection,' a 'cutting in,' as it were. In music it signifies a temporary displacement or shifting of the accent, which commonly occurs in two ways:

"(a) By trying a tone occurring on an unaccented or weak beat over an accented or strong beat, as:

"(b) By an accent or sforzando on a note occurring on an unaccented beat, as:

"Both the primary and the secondary accent may be shifted or suppressed."

"Are there any special rules for playing these syncopated notes?"

"In playing we accent the syncopated note ahead of its time: that is, upon the note which is tied over. The base note which occurs where the note is tied over also receives a stronger accent than would ordinarily be required."

"Did the great masters make use of syncopation?"

"Although they used it occasionally, their works by no means abound in this form of irregular rhythm. Hungarian music, however, and American ragtime, is characteristically syncopated. These few hints will give you a foundation upon which to base a more detailed study of this rather intricate rhythmical device."

Beethoven's Piano Sonatas

(Continued from page 334)

wrote  where they intended the notes to be played  . Such a movement should properly be written in 12/8 time, but composers seldom take the trouble to do this.

Finally, do not consider me over-fastidious if I ask you to make a slight modification in the conclusion of this Sonata. Beethoven has written

Ex. 15

On the modern piano the major third of a common chord sounds very unpleasant and we rarely play a full chord in the lower octaves, as used formerly to be done, purely to lend body to the tone. If you will change the sixteenth-note on C♮ of the left hand to an A, or a D♮, or even omit both the sixteenth-notes, you will find the effect much improved. If it were not the very last cadence it would not matter so much.

Self-Test Questions on Mr. Corder's Article

1. *Why are the Beethoven sonatas indispensable in the studies of the would-be pianist?*
2. *What is a "pet device" of Beethoven?*
3. *What interpretation shall one place on the "Con espressione" of Beethoven?*
4. *What two special difficulties are met in the Menuetto of Sonata No. 1 in F-Minor?*
5. *When and why should "fake" or "trick" fingering be used?*

Teaching the Child to Listen

By Mary Alice Smith

MARY LU began piano lessons before she was through with kindergarten. She didn't so much as know her letters, and the first seven of them she learned at the keyboard of the piano.

Her soft little fingers made friends with the ivory keys at once, and soon she was playing exercises and remembering to keep her hand in position, and to be accurate in rhythm. But her ears were lazy, and they wouldn't help her fingers, for she could not keep on the track of even the simplest tune. In vain her teacher and mother strove —Mary Lu's ear was a laggard in music.

And then an accident happened to her eyes, which made prolonged treatment necessary. All the fascinating notes and bars and lines that had made such a delightful puzzle to Mary Lu to read at practice time went under an impenetrable cloud. From behind the bandage she could not see the keys.

Lessons were, naturally, the last thing to be thought of. But mother and teacher had a talk, and out of that talk came a plan. It was this: that while Mary Lu's eyes were disabled, her lazy ear should be given a chance to catch up.

So Mary Lu was perched upon the stool and made to feel the keys, not trying to look at them. First she had to hunt for middle C, and, having found it, to lose it and hunt it again and again, and to know by the sound when she had found it. Then the same process was followed with the third above, then the fifth. And after this she was told to try to sing the note before and after she found it, then the whole triad in succession, first sung by her shifting, uncertain little voice, then found with her groping fingers, then sung again to make sure the keys were the right ones. It was an entrancing game, and Mary Lu played it with great pleasure.

After her fingers and voice had become accustomed to acting in concert, she was given a tiny tune to sing, and to find it on the keyboard. It was a funny tune when Mary Lu got through with it the first time or two, but by degrees it came into focus and was a real "sure 'nuf" tune.

When the voice grew tired, then mother or teacher played and Mary Lu sat in a big chair and listened with all her might. And sometimes she sang the tune after them, with more or less accuracy. There was a guessing game, too, in which teacher played every possible combination of the triad in various keys, and Mary Lu's part was to name the notes correctly.

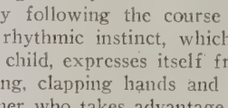
Of course, all these devices were not tried o time, or the baby mind would have become wo this would never have done. But little by little student was led to accept the verdict of her ear in In a short time her memorizing mind had so p that she was playing the "Twelve Easy Studies" o bog entirely from memory, and executing the correctness and smoothness that was surprising.

And when at last the bandage was off the inju and Mary Lu was again reading notes, both th and mother were delighted at the balance in th musical development. She had not appeared to of much musical talent, but with those weeks o training something seemed to awaken in her. ear, recognizing their mutual dependence, move harmony natural to one with the heaven-born g Mary Lu, who had apparently had so little giu *to play*. Proper phrasing and delicacy of shadi oped with her new understanding; and, as time on, she has become an interested and intellige player. Without this period of intensive ear tra must undoubtedly have remained in the large young pupils who depend upon the mind withou operation of the ear, who rarely arrive at anyth tically creditable.

Every teacher, it is to be supposed, has her of teaching students to listen. One plays to with about the success that admonishing has. insists on separate hand work at the lesson, that little of it can be depended on at the home The methods are many. And yet pupils com from other teachers who seem not to have had plained to them what real listening is.

Playing after one has learned to listen is to ha thing to give; playing where the meaning of the tion has not been apprehended, is to have no m convey. One who sits beyond the sight-line opera. One in the parquet *sees* it. How few and see!

Now, to teach the child to listen is to hamper t way of study. Arriving is slow at the best for n none arrives who has not conceived truly th listening.



A Study in Rhythm

By M. Felicitas

RHYTHM, an instinct which is practically universal, is the element which gives meaning to music. The first efforts in the musical training of children should be directed towards the rhythmic phase of the art, by impressing the feeling for rhythm.

This is merely following the course pointed out by nature, for the rhythmic instinct, which is in evidence in every normal child, expresses itself freely in dancing, marching, jumping, clapping hands and numerous other ways. The teacher who takes advantage of this fact obtains real and lasting results.

At the first lesson in rhythm, which should be done apart from any tonal work, the teacher should set the metronome at about 50, instructing the pupil to listen attentively to the regularity of ticks. After some time the metronome should be turned off and the pupil obliged to imitate the ticks by tapping with a lead pencil. Next, one tone on the piano may be sounded at the same tempo, and later on grouped into measures of two and three beat time by stressing the first of each two and three tones, as follows:

In the teaching of eighth notes for the first time play

with the metronome at 50, then

until the pupil is able to tap the eighths with a pencil without the metronome, but with evenness. tions of various note values may follow,

It is much better for the sense of rhythm to re eighths to be played without resorting to the m counting "one and, two and." The mere countii time, so often relied upon, is of no practical val the beat is heard and felt.

Another practical application would be to play in two-beat time, and train the pupil to march clap all the beats heard, to clap strong beats onl loud for the strong beats, and softer for the w Next, play pieces of three and four-beat tim through the same process. In a surprisingly sh children will be made to feel the difference betw of these meters and be able to tell which kind of being played.

Is not this training of the feeling for rhyth advantageous to a pupil than being able to tell ing" at a printed signature that a piece is in two three-four meter?

The "pouring in" of facts on the part of a which is analogous to an appeal to the intellect reversion of the natural order of human deve The sense of feeling exists in every child, but the ment of the intellect is a gradual growth aki growth of the physical being. Such a method of would be a fulfillment of the Pestalozzian pri pedagogy that "Reality must come before symbo

"The Etude" welcomes you to its headquarters, 1712 Chestnut Street, during the Sesq Centennial, from June to December, this year, and also at its exhibit in the Palace of Libe Arts, Section K, Booth 26.

Chopin As a Master of Form

By A. REDGRAVE CRIPPS

he following article is taken in part from an article which appeared "London Musical Times" over ten years ago. It will give the earnest t, with the patience to read slowly and carefully, a very excellent of the main factors in Chopin's employment of musical form.

here is probably no musician who has been at once so fortunate and ortunate in his posthumous fame as Frederic Chopin. Fortunate, he has attracted the attention of many to whom, as a rule, music makes but little appeal; unfortunate, because, largely through that very circumstance, a somewhat false picture of him has little by little been built up. His name has served as a peg on which to hang much empty rhetoric. Thus, we have Chopin the sentimentalist, Chopin the "tone poet," Chopin the lover, Chopin the (supposed) patriot; but Chopin the musician—for him, indeed, we have very far to look. And yet it is as musician pure and simple that his figure grows yearly stronger.

F THE perfection of Chopin's writing for the instrument there is indeed no need to speak; it is sufficiently recognized, in words at least (though perhaps it is only those who ually *played* his works who can have any concep- how very perfect that perfection is), by all who itten on him. But what needs to be pointed out is precisely because Chopin was not a pianoforte t all, in any special sense, that his writing is so Chopin, that is to say, was not *primarily* a writer pianoforte. We cannot imagine him scheming ial effects for the instrument, as Liszt, or even nn (in rather a blundering way) did, and then rating them in his music. In the whole of his in the whole, that is, of his mature writing— hardly an instance of a passage dragged in merely sake of display, or to fill up, or for the sake of ecial effect; every passage exists only for the its relation to the whole, and apart from that would have no meaning. The perfection of his te writing, in short, lies in this—that it is only a greater perfection; and it is only when this is ed that we can appreciate in any true sense even ection of his pianoforte writing itself.

Chopin's Conception of Form

thing further follows almost immediately from at has been said. We must not hope to find in examples of what theorists are pleased to regard " in the abstract,—or if we do we shall be disap- Theoretical writers are fond of dividing form ferent categories,—the "Sonata form," "Rondo he "Dance form," and the like. For Chopin—as ser—such divisions simply did not exist. Indeed, ould do justice to him we shall do best to start by g that there is such a thing as form, in the at all. Only then shall we be in a position to matter from Chopin's own standpoint; and only erefore, can we realize what he aimed at, and how he achieved his aim.

Rough Classification of Chopin's Works (As Regards "Form")

fication, however, provided it be sufficiently and loose, may be useful as making for clearness. And, taking Chopin's works altogether, that, roughly, they may be divided into three (1) Those pieces which are perfectly homo- (as to style and "subject") throughout, and which erefore be conveniently described as "one-idea" (2) those which are made up of two (at least) ideas or "subjects," and which may accordingly "two-idea" pieces; and (3) those pieces which of a number of "subjects," and may be described pletely developed" pieces. Of course this classifi- annot be strictly maintained; each class merges one above it; but that being understood, some gh classification may make our task easier. It is third of these classes (the "completely devel- ieces) that we are here chiefly concerned. Nev- , the principles of construction which Chopin are so essentially the same throughout all his hat it will be well to begin by glancing at the classes.

The Simplest or "One-Idea" Pieces

"one idea" pieces (as we have called them) are d, of course, slight in length. They are to be most exclusively among the Preludes and Etudes. w, however, of these—in fact, only a few smaller , such as Nos. 1 to 7, 9, 10, 11, &c.,—can be be strictly "one-idea" or absolutely homogeneous out. Mostly they may be sub-divided into three according to the following plan: (1) A "section" g of course on the tonic and making a more or nite close either in the tonic or (more generally) ied key; (2) another section, naturally spring'ng e preceding and forming a continuation to it; the first section repeated, but altered at end so as to remain in tonic. This plan may be conveniently represented to the eye by the formula $a + b + a$. Nearly all Chopin's Etudes are in the simple form (all of Book I. and nearly all of Book II.), and it is also to be found in a few other smaller pieces. So clear and simple, however, is it that it can hardly be overlooked. As a particularly obvious example the third Etude, Book I., may be quoted. The first section (*a*) ends at bar 21; the second (*b*) extends to bar 61; and the first (*a*) is then repeated with one phrase omitted. In the Etude which follows immediately, No. 4, the division is less clear; it is not easy to say precisely when the first section (*a*) ends, though its return (at bar 51) is clear enough. In this Etude, too, as in many others built up on this plan, Chopin extends the final section into a little *Coda*, thus emphasizing the sense of tonality, and rounding off the design.

"Two-Idea" Form

If in a piece built on the above simple plan the three sections be more distinctly marked off from each other, and given a more distinctly separate character, we have what we have called a "two-idea" form, which may similarly be expressed by the formula $a + b + a$. This form, in reality, in no way differs from that just spoken of, except in the more decided character of its sections; and it is, as a matter of fact, impossible to draw a hard and fast line between them. As decided examples, however, of the "two-idea" form may be mentioned Etudes Nos. 5 and 10 in Book II., which may be contrasted with the examples just mentioned of the "one-idea" form. Other examples may be found in the Valses (Op. 64, Nos. 1 and 3; Op. 70, No. 1), the Mazurkas (Op. 17, Nos. 2 and 4), the Nocturnes (Op. 9, No. 3; Op. 37, No. 1; Op. 48, Nos. 1 and 2), and the Impromptus (Nos. 1 and 4). Examples, indeed, are very numerous; in fact, by far the greater number of Chopin's pieces are founded on this form (which of course is one of the simplest known in music), or else, more commonly, on some simple extension of it. Such extensions are to be found, indeed, in even the smaller homogeneous pieces, especially the Mazurkas and smaller Valses (which may be said to stand about midway between the true homogeneous "one-idea" piece just spoken of and the more distinct "two-idea" pieces we are here considering); and generally they take the form of a sub-division of one or other of the sections, making the section so divided a complete little piece in itself. Thus in the Mazurka, Op. 17, No. 1, we have the first section sub-divided (giving the formula $a\ b\ a + c + a\ b\ a$); in the Mazurka, Op. 17, No. 3, both sections are sub-divided (giving the formula $a\ b\ a + c\ d\ c + a\ b\ a$). It may be remarked, however, that, as a rule, when the first section is sub-divided only the first sub-section is heard on the repetition, as in the Mazurkas, Op. 6, No. 1; Op. 7, No. 1; the Valse, Op. 69, No. 1 (of which the formula is $a\ b\ a + c + a$); and the Mazurka, Op. 7, No. 2 ($a\ b\ a + c\ d\ c + a$). Very often, of course, the first and second sections are divided less obviously, as into two parts only and so on, giving such forms as are to be found in—to take a few examples at random—the Mazurka, Op. 24, No. 1 ($a\ b + c + a$); Op. 41, No. 1 ($a\ b + c\ d + a\ b\ a$); Op. 7, No. 3 ($a + b\ c + a + e + a$). In the last of these, as in some other Mazurkas, a certain unity is given by the repetition of an opening phrase at the end. To go, however, over all the varieties to be found would be unnecessary as well as tedious; and it is, of course, in the larger (or "two-idea") pieces that the possibilities of this simple form are most strikingly conveyed. In these nearly always the first section is itself sub-divided, and very often the second: as in the Scherzo, Op. 20 (A ($a + b + a$) + B + A ($a + b + a$)); the Polonaises, Op. 26, No. 2 (A B A + C + A B A); and Op. 40, No. 2 (A ($a + b + a$) + B ($a + b + a$) + A a). Here, too, very often only the first sub-division of the first section is heard on the repetition; and it may be remarked that, as in the smaller forms also where this is the case, and especially where the three sub-sections of the first sections are pretty distinctly divided, the effect on the hearer is often that of the "Rondo" form. The simple form we are considering, however, is capable of even wider expansion than in the pieces just named. This may be seen from such pieces as the Scherzos, Nos. 3 and 4, and the Barcarolle. These, it is true, verge towards the "completely developed" pieces presently to be considered; but in all of them the underlying "three-form" (A + B + A) may be distinctly traced. Another method of extension (not so often employed) may be mentioned: it lies in the simple device of introducing after the repetition of the first section not a new section, but the second section again, following this by the first section once more,—thus making the formula (A + B + A + B + A). This may be seen very clearly in the second Ballade (F major) and the third Scherzo (C♯ minor).

Chopin's Mastery of Form Shown in His Perfect Management of Artistic Resource

It is, however—and this fact cannot be too strongly emphasized—not the mere fact that most of Chopin's compositions can be reduced to a certain form, or formula (satisfying to the eye), that makes him a master of form; otherwise any duffer who can compose in accordance with some predetermined scheme (and what duffer, alas! cannot?) would be a master of form. *It is in the wealth of resource exhibited within the limits of that form that his mastery is shown.*

THE BIRTHPLACE OF CHOPIN AT ZELAZOWA-WOLA FROM A POLISH ENGRAVING

Reading the Bass Clef

By Charles F. Wheeler

READING the notes of the bass clef is an almost insuperable difficulty to many beginners. The treble staff may be read with facility, yet the bass accompaniment must be studied chord by chord and practically memorized. I was so affected even when I began to play the organ in public; and it was only by accident that I stumbled upon a remedy.

As certain hymns were to be found in manuscript only, and others were to be transposed, I set to work copying and transposing. I soon discovered that to designate a note of the bass by remembering that it was on the fourth line was too great a strain; and gradually, with a slight effort, I began to call this note "F." Practice brought progress and I quickly became quite proficient in recognizing single notes. These grew into chords, and I began to refer mentally to a group of notes as the chord "F." It was only a step then to sight-reading.

Later, of course, when harmony was mastered, my ability to read took a slightly different form; but I can think of no better means of learning to read the "left hand notes" than copying manuscript.

"Rhythm, melody, and harmony are simply the threefold means of expression, both of the musician and of Mother Nature. Of the two, Nature makes the better Music, being closer to the heart of God."—H. ERNEST HUNT.

NOTABLE MUSICAL PROGRAM

THE PHILADELPHIA SESQUI-CENTENNIAL

1776 - 1926

May Thirty-First to December First

The musical events planned for the Sesqui-Centennial promise to be of extraordinary interest. They have been arranged by a Committee of one hundred leading musicians of Philadelphia under the Chairmanship of Dr. Herbert J. Tily. All communications should be addressed to Craig King, Secretary, 523 Chestnut Street, Philadelphia, Pa.

Chairman of Composition
James Francis Cooke

Chairman of Soloists
Helen Pulaski Innes

Chairman of Choral
N. Lindsay Norden

Chairman of Organ
Henry S. Fry

Chairman of Orchestra
Leopold Stokowski

Chairman of Bands
Albert N. Hoxie

The program, although not yet complete, is arranged definitely to date, as follows:

BAND CONCERTS

The following bands will give free concerts daily, afternoon and evening, at a music shell overlooking the lake in League Island Park, on the Exposition Grounds:

Conway . . . . . June 1st to June 19th
Thaviu . . . . . June 21st to July 17th
Creatore . . . . . July 19th to August 14th
Wheelock . . . . . August 16th to September 11th

Harmonica Band contests, massed bands, Army bands, the United States Marine Band and other miscellaneous bands are expected to provide additional entertainment.

CHORAL CONCERTS

It has been arranged to give one choral concert weekly—12 by Philadelphia societies and 12 by visiting organizations.

June 9. Catholic Choirs Festival ..... NICOLA A. MONTANI, *Director*
June 10. "The Messiah" ..... *Conducted by* HENRY GORDON THUNDER
Philadelphia Choral Society, Phœnixville Choral Society, Snellenburg Chorus, Fortnightly Club
June 17. "Hymn of Praise" ..... *Conducted by* N. LINDSAY NORDEN
Mendelssohn Club, Reading Choral Society, Strawbridge & Clothier Chorus
June 19. Liederkranz of New York
June 21-22. German Sängerfest
July 29. Negro Music Concert
Aug. 6. "Requiem"—(Verdi) ..... HOLLIS DANN, *Director*
New York University Chorus
Aug. 26. Concert of Negro Spirituals
Aug. 27. "Hiawatha" ..... By NEGRO CHORUS
Sept. 3-4. Eisteddfod
Sept. 23. "The Fall of Babylon"
Combined Suburban Choral Societies
Oct. 14. Concert by Private Schools and Colleges..... BRUCE CAREY, *Director*
Oct. 21. Associated Glee Clubs of Philadelphia
Oct. 28. Public School Concert..... GEORGE L. LINDSAY, *Director*
Nov. 18. Concert by Combined Women's Chorus
Matinee Musical Club ..... HELEN PULASKI INNES
Philadelphia Music Club ..... CLARENCE BAWDEN
Treble Clef ..... KARL J. SCHNEIDER
Nov. 24. A Capella Concert
Choral Art Society..... H. ALEXANDER MATTHEWS
Mendelssohn Club ..... N. LINDSAY NORDEN

ORGAN RECITALS

A four manual organ with practically two hundred stops, valued at $150,000, is being built by the Austin Organ Company.

Recitals will be given in the Auditorium daily from 12 to 1 o'clock by leading organists of America and Europe.

ORCHESTRA CONCERTS

The Philadelphia Orchestra of more than one hundred has been chose official Exposition Orchestra, and Leopold Stokowski has been appointed of the orchestra program.

It is planned to have two symphonic concerts weekly (Tuesday and S and guest conductors have been invited from other American orchestras, ea period of two weeks, covering the time from June 1st to October 1st.

During October and November, if possible, the other American orchest their own conductors, will be invited to appear for a week of two concerts

PRIZE WORK

The following prizes were offered in the International Musical Competiti Sesqui-Centennial Association:

Opera—$3,000—Contest closes March 1st
Symphony—$2,000—Contest closes April 1st
Choral—$2,000—Contest closes April 1st
Ballet, Pageant or Masque—$2,000—Contest closes April 1st
A Capella Choral Suite—$500—Contest closes April 1st

The Prize Works will be heard during the Sesqui.

NATIONAL INTERSTATE CONTEST

Successful works will be heard at the Sesqui-Centennial, to be conducte National Federation of Music Clubs under the auspices of the Sesqui-C Music Committee.

Prizes of $500.00 each for Soprano, Contralto, Tenor, Bass, Pianist, Violinist and 'Cellist will be awarded to boys and girls under 24 years of highest excellence.

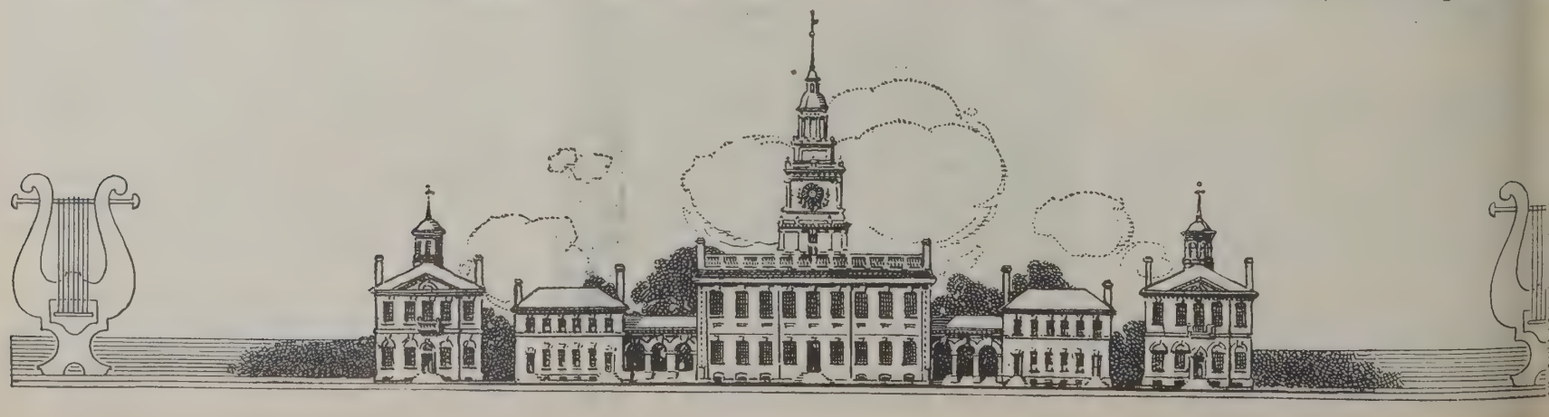
State contests will be held; then twelve district contests from the State Then the final eight winners from the twelve districts will give a grand c the Auditorium, using the selections with which the honors were won, aft the prizes will be awarded.

SPRING FESTIVAL

The Philadelphia Music League will give its fifth annual Spring Festiv Stadium on the nights of June 23d and 24th, with a mixed chorus of 1,0 ballet, orchestra, band, stage and superstage.

"America," a patriotic fantasy in four periods and twenty-three table be rendered.

ASSOCIATED GLEE CLUBS OF AMERICA



Two thousand male singers from Philadelphia, New York, and cities radius of 300 miles will give a grand concert in the Auditorum on Saturday ber 27th.

Leopold Stokowski will be invited to act as Guest Conductor.

FESTIVAL CHORUS AND CHORUS OF STATES

A chorus of 5,000 voices, comprising singers from every State in the being organized under the auspices of the Philadelphia Music League to supp numbers for special events and to give one grand concert.

THE ETUDE welcomes you to the Sesqui. Make our establishment your Philadelphia Headquarters. We are located in the of the new financial, business, hotel and theatre section of the city. Courteous attendants will be glad to extend assista making your welcome memorable. If you desire, have your mail addressed care of THE ETUDE, Philadelphia.

How Can I Raise the Standard of My Playing?

Some Experiments in the Fundamentals of Passage-Playing

By FLORENCE LEONARD

American Representative of Ludwig Breithaupt

SEEKING to overcome defects, it is wise to consider, at the beginning, whether they are defects of ear, of musical sense, of general mental attitude, or of the playing mechanism itself—the hand and the f the hand.

rthmic effects, for instance, may be clearly thought nd yet the hand may not carry out the thought. It or it may not be able to do so. The reason for its e must be found. For rhythm is vitally dependent ne, and tone is absolutely dependent on the use of nds.

nany cases, tone perception and tone imagination be latent but not developed. They need constant ng in connection with the development of the mech- which produces tone—the hand.

at is the hand, besides being that mechanism which ly touches the keys? It is the free end of the arm. f our most common mistakes, in former days, was at the hand as if we had no arms, as if we were ities, with our hands attached to our shoulders! we went a little farther and tried, in the words of r, to let our arms "hang like a wet towel." But naxim of Köhler did very little to overcome the ul effects of his other maxims in regard to stiff, ural positions. But we tried to get some help from dea; and then we went a little farther still, and our arms from side to side, at convenient pauses, ld ourselves that thus we were relaxed, and that ow that relaxation would help our playing. How hy, were pretty vague in our minds. For we were ractically clinging to Köhler's stiffness. We were g grasshoppers of ourselves. Grasshoppers can one direction only. They are constructed that way. our arms have the most marvelous mechanism for g in all directions, and each member of the arms, s, has its own equipment for moving in certain ons, so that most subtle combinations—compound nents—are possible.

Natural Players

E NATURAL players (who knows where Tausig ot his technic, or Liszt, or d'Albert, or Carreno, or oday, such players as Novaes; who have their technmost perfectly without academic training) make stinctively, of the subtle compound movements which e has provided, without regard to the restrictions hler and his followers. They play! They go to rs to be taught many things indeed, but they use ools instinctively and rightly.

we have learned many things about their playing. d down movements of the wrist were forbidden. ve find them indispensable, if made in the right way the right time. Moving the elbow, to help the pass under was forbidden. Now we find it most if it is done intelligently. Moving the hand in and as a horror! Yet we find it a contributing factor of est legato, and a fundamental of octaves and other notes. We are beginning to see with our eyes, most to hear with our eyes, when we listen to the players; that is, we are beginning to be able to see ney make their effects.

hen, we try to consider the hand as a part of the ow can we definitely apply that idea, to improve nd rhythm? First, we must consider tone, for that iously, the material from which we make rhythm. study the effect of finger alone, and finger plus And we must remember that black and white, words er, are a poor substitute for illustration and imitathe keyboard, and so let the ear, and the sense of uality, be very much alive in these experiments.

rcise 1. Lay the left arm diagonally across the lap, lm of the hand down. Lay the right arm across, the body than the left arm is, so that the fingers right arm lie upon the left arm, just above the Be sure that the right wrist lies upon the lap, so e arm is resting heavily at that point.

1 fingers 2 3 4 5 of the right hand, and without mov- wrist, play upon the left arm, repeating slowly , 2 3 4 5. The fingers fly lightly and freely, in the e joint, the hand should feel soft and relaxed. The m is conscious of a light, definite impact from each

Vertical Arm Playing

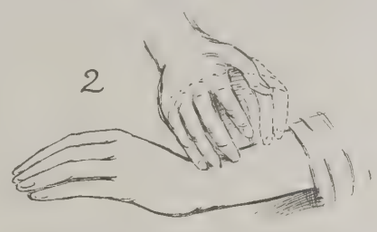
EXERCISE 2. Now, as each finger drops lightly upon the arm, make the wrist slowly rise, vertically and forward, a little higher with each succeeding finger, 2 3 4 5, in one smooth, ascending curve.

It is important to see that the elbow is loose, so that it gradually straightens out, or becomes almost fully straightened.

Drop the wrist again, and repeat the upward swing. Let the weight of the arm thus move from its resting position in the lap (the wrist) to rest on the tip of each finger, in turn. The sensation in the left arm will tell you whether the arm is resting on the fingertip, or whether you are "carrying" the arm in the shoulder. Make this test to see whether the fingertip feels heavy or light, as it "plays" on the arm.

Make another test also, a test for pressing. If you are pressing, the fingers will feel stiff and tense, and that feeling of tension will run back, through the hands, up the forearm, even into the upper arm. You will presently feel fatigue, and the impact on the left arm will be excessively heavy and "thick." Experiment until you can distinguish between pressing and *not* pressing, or leaning. Leaning on the fingertip is right, pressing is wrong. Why? Pressing causes fatigue and often deadens the tone instead of enriching it. Pressure and weight combine in the most advanced playing, with splendid effect; but this technic should be built up on the freer technic, and with great care, to avoid injury to the arm. Moreover, it is not necessary to all styles of playing, not even to all *ff* effects.

To return to the experiment—when you are "leaning," the fingers will not feel quite as free in the knuckle as when the arm was lying quietly and the fingers were doing all the work. That is because they are supporting a weight and more demand is made on the muscles. But they must feel mobile and not stiff. When there is pressure they will not feel at all mobile.



Portrait by Dooner

FLORENCE LEONARD

Rolling

AFTER you are sure of this up and down movement (vertical), try Exercise 3. Take position as in Exercise 1. Raise the wrist, and let the arm rest, with high wrist, on the second finger. Roll easily sidewise, upon 3 4 5, and back to 4 3 2, with high wrist, the wrist describing short sidewise curves, while the fingers act like the spokes of a wheel. The fingers here may move in the knuckles slightly, or, better, not at all, merely receiving the weight of the arm. The test of the weight is, as in Exercise 2, in the sensation felt by the left arm.

This movement is the sidewise rolling movement, sidewise only, with the wrist level.

Exercise 4. For the fourth experiment drop the wrist to the position of Exercise 2. Play with 2 3 4 5. On the second finger make the wrist rise, but instead of letting it continue to move vertically and straight forward, make it move *diagonally* forward,—a movement which is the combination of those in Exercises 2 and 3.

Experiment with these three movements—vertical, rolling, diagonal till you can easily distinguish between them.

The next step is to vary the weight on the fingertips, beginning with heavy weight and changing gradually to light weight, or the reverse, and always distinguish between weight and pressure, avoiding pressure.

There is still another experiment to make with these three, and the success of all of them depends on whether the experimenter is watching the feeling in *both arms*.

So far, it is probable that each individual finger has rested on the left arm in such a way that you have had the sensation of a definite, separate impulse for each finger, for each spoke of the wheel. Perhaps you remember that in the rolling exercise the impacts were not so distinct. But now imagine that there is a rim around the spokes, in each of the three exercises. Keep the fingertips near the left arm, or touching it, and try to get the smoothest possible connection in moving from finger to finger, so that you feel a line, and not a series of dots. Try, also, with Exercise 2 to roll the arm along in the same manner when the wrist is lower, the wrist about level with the knuckles.

Comparing Effects

FINALLY return to the very first position, where the wrist is resting on the lap, and contrast the light tapping of the finger with the smooth rolling or diagonal up swing of Exercise 6, and also with the effect of 4 2 and 4 4, where both finger and arm are in movement.

Exercise 7 is a variation of Exercise 4. Instead of beginning with the wrist low, begin with a high wrist, and make a gradually descending curve, 5 4 3 2.

What have these experiments to do with piano playing? They enable you to feel, through the impact of the finger on the arm, that there are possibilities of richness and power, smoothness, and detachment, good tone (and bad tone), all of which are found in the arm when we think of the hand as the end of the arm. These are some of the possibilities which are utilized, day by day, by the great players.

How shall they be applied to the keyboard, to obtain their musical value?

The postion in which you have held your arm for these experiments was well adapted to give you the results of

the movements. But it was not favorable for the movements themselves; for the muscles are less free in action when the arms are crossed in front of the body.

Try, then, the same experiment with the right hand resting on the right knee, or just above the knee, the hand lying in almost a straight line with the shoulder. Begin with the very first exercise, in which the wrist lies flat, "resting," while the fingers only "beat the tattoo."

In this form of the experiment, watch carefully the way the arm balances on the fingertip—whether it moves smoothly and evenly, or whether it "wobbles" and falls more heavily on one finger than on another. Notice also the difference between the smooth movement and the series of jerks in which the fingers had more the effect of separate spokes. You will find that the manner in which you guide the arm is the factor which makes these different effects of smoothness (unity) or jerkiness (separated tones).

The "Soft" Hand

BEFORE experimenting with tone-making, say to yourself that a soft hand is important. We have to remind ourselves frequently of that fact, for we are so accustomed to thinking "firm hand" that it is not easy to remember that the hand should *not always* be firm.

At the piano, sit with the elbow a trifle lower than the keyboard, otherwise wrist and elbow are not likely to move freely.

Place the right hand on $\begin{pmatrix} \text{E} & \text{F}\sharp & \text{G}\sharp & \text{A}\sharp & \text{B} \\ 1 & 2 & 3 & 4 & 5 \end{pmatrix}$.

At first, play with contact; that is, the fingers are laid upon the keys, and they are not lifted to make a stroke from the knuckle. There is no stroke. The tone is made by the movement of the arm. Place the hand (resting on the thumb) so that wrist and knuckle are nearly on a level. Swing the wrist down, to make the thumb tone, and swing up to make the remaining tones.

Repeat Exercise 2. Play the ascending figure, 1 2 3 4 5, several times, till you begin to feel some command of the movement, then play the descending, 5 4 3 2 1, dropping the wrist on 5, and gradually rising to 1.

Repeat all the experiments, *without using the finger stroke*, but following closely, with the ear, all the effects. Remember that a hard tone means that the hand is not soft, or that the elbow is not moving loosely, or that the wrist is not moving loosely. If the tones are unsteady, you are not leaning properly, or you are not balancing the arm properly.

Next, repeat Exercise 2, first without finger, and then with finger stroke added to the upward swing. Finger stroke means only a light swing of the finger, with a good, firm "throw" toward the key, but never at any time a high tightly curved position.

At first, the upward swing of the arm may throw the finger off the key. If this happens, the swing is too great, or too sudden. Keep trying, till the hand feels secure on the key. The swinging motion should add security, should swing the hand onto the keys, not off them.

Next repeat Exercise 3, but with level wrist, and with added finger stroke. Finally take Exercise 4 in the same manner—rising wrist, in diagonal direction, and finger stroke added.

Using the Three Movements

All these three movements are used in playing, with finger or without. No. 2 is used least, after the preparatory stage has been finished. No. 3 gives most rapidity, but, when it is used alone, it is the most difficult to control for accuracy in runs. It needs to be combined with No. 2, as in No. 4. But for broken octaves, tremolo trill, and the like, it is the most important movement. No. 4 (the combination of 2 and 3) is used constantly. In rapid playing it reduces to a movement so slight that it is hardly perceptible to an untrained observer.

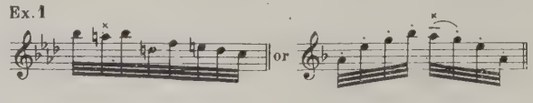
After playing these exercises on the black notes, play them also on C, D, E, F, G. The fingers will here be slightly curved—*slightly*. The high knuckle, the fist-shaped hand is not the desirable one for these effects. The pear-shaped hand is better.

Play next on a broken chord, B, D♯, F♯, B, or B, D♯, G♯, B, or C, E, G, C, or C Eb, G, C♯, and C, E, A, C.

It is evident that adding one group of broken chords to another—dropping the wrist on the thumb, for example, and then rising again, will give an arpeggio. Likewise two groups, $\begin{pmatrix} \text{CDE and} & \text{FGAB} \\ 123 & 1234 \end{pmatrix}$, make the scale of an octave. The low position of the wrist sometimes falls on the thumb, sometimes on the second finger, according to the accent and use of the scale. Accents, by the way, are made at any point in the rising or falling movement, by giving a slight extra impulse in that direction. At first the scale should be played without accent, except on the first and last notes; for the arm must learn to make the groups of notes quite smooth and "even" in quantity, before making variations from the normal.

Now, if your ear is good, if you have a good sense of tone quality, of rhythmic accuracy, and of legato, you have already discovered that in respect to these three points, the movements which you have been practising are vitally important in improving your playing. But if you do not yet perceive such possibilities, do not feel sure that they do not exist, and do not feel sure that your ear is not good. The ear, too, develops with use.

On Tone Quality



FOR example, the tone that you make—if the directions have actually been followed—is of a sweet quality; it is long and singing. When you do not use the finger, it has very little percussive quality. That is, as each tone begins it is less sudden, and more in effect like the tone made by playing on instruments with a bow. Of course that kind of tone is not always suitable for the piano. Most often we prefer the tone which is more definite in beginning (attack). But both tones are useful; and the ear should learn to distinguish them.

When you really lean on the fingertips your tone has a rich quality besides the sweet and singing one. And when you add the finger stroke to this arm tone, you gain distinctness, definition, without losing richness.

The tone may not be large, at first. But as you gain confidence, and allow the arm to move freely, the tone naturally increases, without losing quality.

If you experiment with modelling < > > < and with accenting, you will find that you can get a satisfactory graduation of tones, with no hardness. Brilliancy and hardness are not the same! Further, if you apply these arm movements to various figures, such as

Ex. 1

also to *Chopin's Revolutionary Etude* (measures 35-47); *Prelude in C major; Etude, op. 25 no. 11; Liszt's Concert Etude in D flat; Mendelssohn's Spring Song;* and countless other passages; you can with ease and certainty bring out a note clearly, give an accent, complete the rhythm—whereas that same note would sound weak or thin, might even seem impossible, without the help of the arm. Do you ask if it might not be played with finger strength alone? The answer is: *perhaps*, after months or years of practice, *and* with a sacrifice of quality.

Third, you find that one tone flows into another with smooth connection and without *effort* to make the legato. And as the ear develops, you will hear that this sort of connection, by means of the arm, makes a mature effect of grouping, of phrasing, which is usually not possible to the young student, and often not attained by the older one.

This legato, although it is advanced in style, is not yet the highest artistic legato; that develops out of still more advanced movements. But, if you would get these effects which have just been enumerated two things must be done:

First, it is necessary to allow the weight to rest on the fingers, and constantly to vary the amount of it.

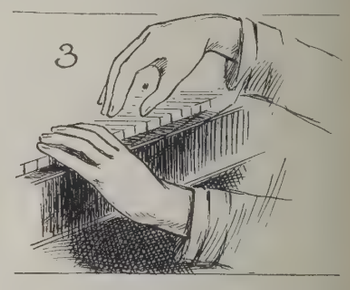
Second, the arm must be balanced or swung, exactly *right*, neither with too much impulse nor with too little, neither dropping the wrist too often nor too seldom.

There is an interesting and satisfying proof of the naturalness of these movements in this fact, that the arm itself, if it is allowed to decide, will choose the right moments for balancing, will fit itself to the figure. And yet the ear must ever guide the arm; for every passage may be played in several ways, and the sensitive ear must decide whether it may be played in the most convenient way for the arm, or whether a less lazy way for the arm will give a more satisfying tone.

The Essential Ear

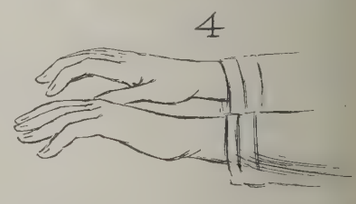
THE ear, which at first does not perceive much difference in tone quality, can be awakened to a lively sense of the different effects, by constant practice in listening to the different kinds of tone-making. What is more necessary for interpretation than the listening, discerning ear? Imagination? Yes; but, without ear, how can we imagine tone, or how can we determine whether we realize the interpretation that we have imagined?

Still other advantages of these movements become clear after experience with them. Speed, for instance, is greatly increased. To play a whole group of notes with one swing of the arm and only a slight effort from the fingers (the effort of taking their places on the keys) —this is quick as thought. Clearness? Certainly the notes are clear, if the balancing is right. A slight add movement from the fingers will give more cle as we have already seen.



Ease and endurance are increased for the sam sons; absence of effort in the small muscles, the ing of rapid notes by the arm movements.

How far does this "lazy" sort of playing go? to play every composition this way, with more tilting of the arm, more or less vertical movement or less rolling, more or less finger? Every scale passage can be played in this way, and a few playe this style of playing exclusively. But the greates ers do not use any one style of playing exclusive



Individual Choice

When we take lessons from a famous player, we ably go to that teacher because we like his or he and style. Now each famous player has crystalliz ideas into a certain fixed combination of tones and ellings, and therefore of *movements* which h and imagination prefer. That does not mean th never varies from them, but that, in general, ones please him, and certain others displease his cal judgment. These chosen movements may be e perfect for this player himself, and entirely for some one else, because no two hands are quite no two dispositions are alike. If one person pl passage with no deviation from "a straight lin black and white keys, that does not prove that one else could not accomplish it better by turnin straight line into curves. Ideals of tone, conditio the hand and the nerve energy, must decide the tion.

The experiments which have here been describe experiments in free curves, not in straight lines. St lines, free curves and intently controlled curves, all are used by the greatest players. For some styles of positions require one movement, others require other ments. But certain players prefer only one style play all compositions in that one style.

This is the extreme high and low position in free c

Here we have the average position for the han straight-line playing or "controlled curve" playing.

These experiments are a key to all the free sty playing runs of every sort, and they are the found on which every other and more difficult style can be If you use such movements constantly, you can al from the beginning, have as much "independence" o gers as is needed. You will not have to overcome ness, in order to get smooth, mature phrasing and speed, because the stiffness will not be there.

In order to develop the movements properly, and them dependable they must be practiced and used, day, in slow tempo as well as fast, in every sort o (figure) that you meet, until the arm learns to move readiness and suppleness, to make small movemen well as large ones, and especially to keep the soft, able sensation in the small movements.

Note: The writer would be glad to hear what su any readers may have in these experiments.

The true evolution of art is dependent upon a realization of the value of the work of the past, an cannot even seek to destroy the beautiful things have been created by our predecessors without c gering artistic progress in the future. Those who to reverence the ideals of others are scarcely like have ideals of their own, and blind destructiven but a poor substitute for creative energy.—THOM DUNHILL.

Making Changes in Tempo

By ADOLPH F. CHRISTIANI

[EDITOR'S NOTE.—*For years we have been endorsing the notable on musical interpretation known as "Principles of Expression in oforte Playing," by A. F. Christiani, probably one of the very finest s ever written upon the art. Christiani lived in America for a long time and taught in New York City. He was a pupil of Franz Liszt. The following extract is made from his notable book. After many pages of discussion of accelerando and ritardando he discusses all matters pertaining to the interesting problems of sudden changes in tempo as follows.*]

Ritardando or *rallentando*, etc., means: *gradual, sudden,* decrease of tempo, viz.: *getting* slower, *already* slower.

celerando or *stringendo*, etc., means *gradual,* not *n* increase of tempo, *i.e., getting* faster, not *already* .

h meanings are analogous to *crescendo* and *di-ndo.*

e former does not signify *forte,* but *piano,* ning *forte.*

e latter does not signify *piano,* but *forte,* ning *piano.*

is both strange and true, that the distinction be- gradation and sudden change is frequently over- l.

mpo has its sudden changes as well as dynamics.

suddenly faster tempo is not an *accelerando.*

suddenly slower tempo is not a *ritardando.*

o not refer to those general changes of tempo which at the beginning of a new movement, or sometimes a movement, but to those temporary changes with- movement which are frequently confounded with tion, viz.: to the words,

Più—more; and *Meno*—less; and others.

se, coupled with other tempo-terms, signify an , not a gradual change of speed; for example:

osso, Più vivo, Più allegro, Più presto, Stretto, etc.,

r: faster, at once faster; and

Meno mosso, Più adagio, Più lento, etc.,

r: slower, at once slower.

difference between such a sudden change and the l change implied by *accelerando* and *ritardando,* s frequently of great importance, and is surely y of careful notice.

he second distinction is this:

words, *accelerando* and *ritardando,* are, strictly ng, applicable only on a plurality of notes, and n an individual note. To accelerate, or hasten an individual note, is absolutely wrong, because ythmical duration of the note would be curtailed sregarded; hence, the effect would be that of bad eeping, instead of permissible tact-freedom.

retard an individual note or rest, although sub- lly permissible, is, nevertheless, a misapplication of ea of *ritardando;* inasmuch as an individual note, t, may be *dwelt on,* sustained, prolonged, but can- ally be retarded, *i.e.,* become slower.

g habit, however, has so accustomed musicians to isapplication of the word, that very few even think d, still less, point out this difference which, though is well worth observing.

Tenuto and Fermate

meaning of these terms implies a dwelling on, or ing of, a special point—a note, a chord, or rest.

while *tenuto* (*ten.* or ^) is more employed with- ovement, *fermate* (𝄐) [French *point d'orgue, point* ; Germ. *Ruhepunkt;* It. *corona*] is chiefly used at d of a musical period, or cadence, and requires ger duration of the two.

exact duration of a *fermate* (𝄐) cannot be stated, depends on the character and tempo of the move- But, as general guidance, the principle may be d, that in slow movements a *fermate* prolongs about twice its value; while in a quick movement ongs a note at least three, even four times its

fact, that *tenuto* and *fermate* refer to individual merely, renders these terms and indications anal- in reference to time, to what *sforzando* (*sfz, fz,* c.), is, in reference to dynamics, the latter refer- ikewise, only to individual points.

In fact, everything connected with time has its similitude in dynamics; for example:

There are:

	IN DYNAMICS	IN TIME
Five Degrees.....	*pp, p, m, f, ff*....	very slow, slow, moderate, fast, very fast.
Two Gradations...	*crescendo, diminuendo*	*accelerando, ritardando.*
Indications Referring to Special Points	*forzando*, or *sf, fz, rfz, sfz*, etc.....	*tenuto* = *ten.*; *fermate* = 𝄐.
Sudden Changes..	*fp, ffp, fmf*.....	*più lento, meno mosso*, etc. / *più presto, stretto*, etc.

The analogy, in reference to individual points, is so great, and the symphony between emphasis and duration so strong, that very frequently notes, marked *fz, sfz,* <, etc., also need a *tenuto* (*ten*). Or, in other words, emphasized points can generally bear, and frequently even demand, to be dwelt on, sustained, prolonged.

Rubato

Rubato, robbed or stolen; hence, *rubato tempo,* or *rubamento di tempo,* robbed or stolen time. The Italians have also *contra-tempo,* and the French *contre-temps,* as synonymous terms, both signifying *against the time.* It may also be observed that the simple term, *rubato,* is generally used in preference to *rubato tempo.*

1. Any temporary retardation or acceleration is *rubato. Rubato* may be described in several ways.

2. Any negative grammatical accentuation (for example, syncopation), by which the time becomes robbed of its regular accents, is a *rubato.*

3. That capricious and disorderly mode of performance by which some notes are protracted beyond their proper duration and others curtailed, without, however, changing the aggregate duration of each measure, is a *rubato.*

The first of these three definitions requires no further observation.

The second, likewise, has been fully explained already, under Negative Grammatical Accents.

But the last mode, which is, in fact, the real *rubato* as is usually understood, will receive particular notice. This latter mode of performance is the *rubato* of Chopin; very beautiful and artistic when in its proper place and limitation, but very ugly and pernicious when out of place, or exaggerated.

It may be executed in two ways:

1. Both hands in sympathy with each other, *i.e.,* both hands accelerating or retarding together.

2. Or, the two hands not in sympathy, *i.e.,* the accompanying hand keeping strict time, while the other hand alone is playing *rubato.*

The latter way is the more beautiful of the two, and is the truly artistic *rubato.*

Chopin's often reiterated counsel to his pupils was substantially this: "Let your accompanying hand be your conductor, and let it keep time, even while your other hand plays *rubato.*"

Acting upon his own advice, Chopin was always a very good time-keeper; and, in spite of using the greatest tact-freedom and taking the widest *rubato* liberties, his tact-transgressions never overstepped the limit of moderation or offensively interrupted the general tempo. It is, therefore, all the more to be regretted, that a large number of his admirers and imitators, forgetting, or perhaps unaware of these well-known traditions, imagine they are portraying the style and personality of the master, by spasmodically changing the gait of movement, at any moment, generally an uncalled-for one. They thus misrepresent and caricature the very thing about which Chopin was most particular, viz.:

Tact-freedom within strictness;*
Tact-strictness within freedom.

There are musicians, who, believing absolute strictness to be an essential quality, rarely indulge in a *ritardando* or *accelerando;* while others, fancying strictness to be equivalent to stiffness, hardly play in time at all.

Of these two extreme classes of performers, the first is not quite so objectionable as the second; because who would not rather behold the straight-laced, rigid marching of a well-disciplined soldier, than the unsteady, vacillating gait of a musical rhapsodist, intoxicated by conceit or ignorance.

The former, the realist, though he cannot interest, is, nevertheless, a musician; whereas the latter, the idealist, exasperates the listener, and is, in reference to time-keeping, simply a nuisance.

Without discussing such extreme cases, which should both be avoided, let us remember that the proper course to be pursued, in this respect (as in everything else pertaining to musical art), is to keep a *juste milieu* —the golden mean—between exaggeration and tameness.

Accepting this course as the only proper one, we find the surest and best safeguard against overdoing, in either direction, in Chopin's advice to his pupils, as already quoted. In fact, we cannot overrate the importance of, or pay too much attention to, the principle of Chopin:

"One hand should be kept in time, while the other hand retards or accelerates."

Now, it may be said that this is impossible. But such is, by no means, the case. Listen, in Italian opera, to a first-class singer, and notice how steadily the orchestral accompaniment proceeds, while the soloist retards and accelerates, at almost every moment.

It is just this steadiness and general not-giving-way of the accompaniment which the soloist needs and desires, expecting only from the conductor that he will follow, or either wait for him, at the *tenuto* or *fermate* points. Just so should the pianist keep time, and yet be free in time.

How well Thalberg understood the art of singing on the pianoforte, those who heard him can bear witness. And how little the majority of modern pianists know of it, is shown by the unsteady way in which they play accompaniments.

When Thalberg Played

When Thalberg played a melody, it stood out in bold dynamic relief; not because he pounded, but because he kept the accompaniment duly subdued. And when he accelerated, retarded, or embellished his melody, the accompaniment proceeded with steady, unwavering precision, unaffected by the emotion displayed in the solo parts.

This method, far from being stiff or rigid, is not only rational and musical, but beautiful and highly artistic; never provoking and exasperating, as out-of-time playing with both hands, but always gratifying, attractive, and possessing a peculiar charm, which would be entirely lost, if the accompaniment were dependent on the melody, instead of independent of it.

This refers, of course, chiefly to homophonous music, and, particularly, to that kind of modern music which has a distinctly characteristic rhythm, such as dances and all descriptive modern pianoforte compositions.

Rhythm, being the real life of music, must be imperatively preserved, and not mutilated by fanciful or sentimental changes, at variance with the general character of a composition.

As the idea of a composition lies chiefly in its character, and the character is depicted in the rhythm, to mutilate the rhythm would be defacing the idea.

What is a waltz, a polonaise, a barcarole, or a lullaby, without the appropriate rhythm essential to each? And though, it may be argued, a waltz, a mazurka, a polonaise of Chopin, for example, is not really a dance, but a poetized dance-form; yet, it may be answered, the rhythm must, nevertheless, be kept up, or the idea becomes a travesty and a farce, instead of being a poetical portraiture.

I remember reading somewhere, I think in Spohr's auto-biography, that, at an evening-party, Hummel, the pianist, was coaxed by some young ladies into playing a waltz, for them to dance to. Hummel being in one room, while the young folks were dancing in another, kept on playing, and, at the same time, conversing for nearly an

*Tact is the European equivalent of the word beat.

hour; and, though diversifying his musical subjects in every imaginable way, letting even a little fugue creep in, yet he never relaxed or changed his time or tempo, and kept the merry feet a-going, until the young ladies came in a body to thank him, and crown him with an improvised wreath made with the flowers of their bouquets.

Now, although I do not intend to cite Hummel as a model as regards poetical interpretation, yet I mean to say that to play a waltz in waltz-tempo could certainly not impair the poetry of either the composition or the performance; while it is simply absurd to imagine that playing out of time, with the impression of its being *rubato*, could produce a more poetical effect.

Let the student try an experiment with a dance, choosing a waltz—the most pensive, melancholy, undancelike one. Let him play it, first, in the usual lackadaisical manner of sentimentalists, *i. e.*, placing sentiment above the character of the composition; and then play the waltz, again, in the character of a waltz, *i. e.*, keeping time with the accompaniment.

Comparing the effect, or better, judging the effect by the impression which each of these modes of rendering has upon competent listeners, the verdict, as to which is the most pleasing and acceptable, is scarcely to be doubted, and should be convincing.

A waltz must be a waltz, however opposed the sentiment of its music may be to its rhythm. Whatever *rubato* liberties may be taken with the melody, the rhythm (time) must be kept up, at least, in the accompaniment. What holds good in the case of a waltz is equally exigent in any other piece, in which the character is portrayed by the rhythm, such as: marches, mazurkas, polonaises, barcaroles, lullabies, serenades, etc., including even nocturnes, romances, and songs without words; in fact, every style of modern composition.

There is, perhaps, no one of the great pianoforte composers, whose individuality is better adapted to *rubato*, or whose creations more require the use of it, than Chopin; and among Chopin's works there is probably no class of composition more susceptible of *rubato*, than his mazurkas. In these, one may find perhaps the strongest illustration of his personality, in reference to *rubato* liberties.

If the student will try these mazurkas, or merely the earlier ones (Op. 6 and 7), and can succeed in playing them, each hand independently, the one in time, the other *rubato*, he will then understand what an artistic *rubato* signifies, and that its first condition is to guard against sacrificing the character of the piece for the sake of sentiment.

Character is the internal life of a piece, engendered by the composer; sentiment is the external impression, given to the work by the interpreter. Character is an intrinsic, positive part of a composition; sentiment, an extrinsic, personal matter only.

Character is innate, steady, precise; and, inasmuch as it is wholly expressed by the rhythm, more particularly by the time and tempo, the rendering of a piece can only be true to the character, if the time and tempo are generally upheld.

Sentiment, on the other hand, is extraneous, unsteady, varied; and, though it may be appropriate and true, yet it is frequently inappropriate and false.

It is, therefore, necessary to keep the sentiment under control, and always to maintain the character. In fact, sentiment should never be allowed to assume a prominence over, or be detrimental to, the character of a composition.

A Time Keeper

By E. Mendes

With pupils whose sense of rhythm needs training, I utilize our old friend the kitchen clock for a guide. A metronome is not always available, and *this* substitute usually is.

For scale practice it was excellent, using every tick for a note, and then two notes to a tick, This simply means that the pupil is playing first at ♩ = 60 and then at ♩ = 120. The improvement was marked. TRY IT.

No teacher should be assigned to teach music whose training has been wholly within some other field. In other words, it should be generally regarded as a violation of honest, fair administration, for a board of education to assign a teacher trained in the field of English or home economics with no training in music, to the field of music teaching. Teachers themselves should regard such procedure as a violation of professional ethics.—Dr. Thomas E. Finegan.

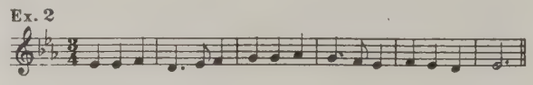
First Steps in Transposition

By S. M. C.

Do not expect to learn all about transposition in one trial for it is an art slowly acquired.

Transposition means the writing or playing of a piece of music in a key different from that in hand, at the same time retaining the original melody, harmony and rhythm, the notes being merely shifted higher or lower, thus changing nothing except the key or tonality of the composition.

The first step is to select very easy exercises or pieces, which should be played in all the keys until facility is acquired. (Perhaps you have not realized that when you are playing scales in the circle of fifths you are really transposing, for the scale pattern is being carried out successively in keys following at an interval of a perfect fifth.



To make this clear, let us take the familiar "America" in the key of F.

Ex. 1

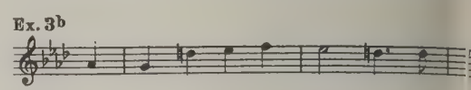
We wish this to be in a key one tone lower (E flat); so we place three flats in the signature and merely shift each melody note one degree lower. If we desire the

Ex. 2

complete harmony each note of it is treated in the same manner. Notes on lines drop to the first space below them; notes on spaces, to the first line below.

To transpose a tone higher, merely raise each note one degree: F becomes G, G becomes A. When transposing two degrees higher or lower, the notes change from one space to the next or from one the next.

Accidentals must retain their relative pitch in t Thus, if we wish to sharp a tone that is flat signature, we will raise it the necessary half-t placing a natural before it. A sharped note wo raised a half tone by placing a double sharp be To understand many of the principles involved, a ough knowledge of Harmony is indispensable.



Transposition must not be confused with modu Modulation is a leading from one key to anot the course of a melody.

To transpose a piece a chromatic semitone, stance from A to A-flat, merely change the sig If a sharp key is changed to the same key-letter i all the natural tones of the former become flats new key; and at the same time accidental shar come naturals.

Ex. 3a

Ex. 3b

Hymn tunes are excellent for practice. At len mind conceives the transposed notes as if actuall ten.

As a final caution, do not attempt to regard th inal notation as continuing, and in altering it keep two keys simultaneously in the mind.

On Selecting Music for Pupils

By Jessie Adkins Greene

Of all the problems which confront a teacher, this is one of the most difficult. It not only requires a close study of each individual pupil's needs, but also demands a wide knowledge of suitable pieces. Naturally, every teacher gains a wider repertoire of teaching material with every year of experience; but, when one is living in the same locality for several seasons, it is unwise to use the same pieces over and over again. I have hit upon a plan which has worked out very well. I have a large class, mostly in the first three grades of study, and naturally each pupil must have pieces. It is a fixed rule never to assign a piece simply *because* the pupil "likes it." It must, at the same time, solve some technical problem for the pupil. If he is studying arpeggios, the piece must illustrate by containing arpeggios. If his principal difficulty be scales, then a piece must contain enough scale work so that by the time he has finished studying it he will have mastered, partially at least, the scale problem.

Living far from any music center, one must rely entirely upon musical catalogs unless one follows this (or some similar) plan.

Along in August, after my class had "lined up" for the Fall term, I sat down at the piano with all my several years' numbers of Etudes beside me. I played through every piano composition in each number (which I did not already know) and, if it seemed to fit some special requirement, I jotted down in a notebook the title, opus number, composer and the date which it appeared in The Etude. After going through in this manner several hundred compositions, I at last selected about a hundred, trying to have several illustrating the *same* technical difficulty in the same grade. These, with the ones I already had in mind to use from my past exp which had been tried and proven to be genuinel I ordered "On Sale," so that before I started t I had the music and could go over it still furt nearly always had some pupil in mind, with a problem to solve, when selecting the piece in t place. The result has been that instead of being re to one piece, the pupil is given a choice of three, g all about the same grade, illustrating the same For example, if I wish to initiate a student i mysteries of triplets—in quarters, eighths and six —I select four pieces written for that exact p and, being quite sure they are in the same grade, them and let the student choose which one she lik

Immediately one gets away from the inertia f pupil who is "taking music." Given a choice, th develops more discretion, and sometimes even *why* she likes one piece better than another! The being able to choose a piece is attractive, an chosen, the pupil will stay with it longer if it is own selection. Of course I do not always all pupils to exercise choice (when it comes to the cl for generally the beauties of Mozart and Bach always on the surface, and close study endear generally speaking, I have found this plan to be ful, and it gives one a far wider range of teachin rial. No catalog description ever placed the c tion in its entirety before your mind's eye (an Some wonderfully well-worked-out things turn ou utterly banal on rendition. The thing to do is to find the *same* problem worked out more beau for, after all, if a musical composition has not who on earth wants to hear it?

What Great Men Said About Chopin

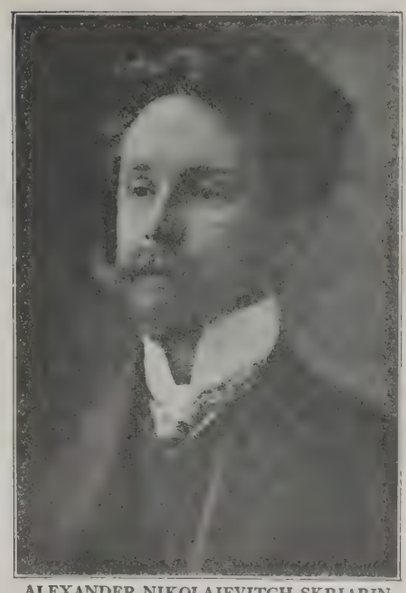
Selected by S. Poraj

"How many emotions did he awake? In what fiery and melancholy dreams did he like to express his soul? He became a priest and sang the ossianic loves of the heroes of his dreams, their chivalrous joys and the sorrows of his far-away fatherland, his beloved Poland, always ready to vanquish."—Berlioz.

"If the Tsar, this mighty autocrat of the North, knew what dangerous enemy threatened him in the works of Chopin—in those simple melodies of mazurkas—he would have prohibited this music. The works of Chopin are guns hidden under flowers."—Schumann.

"Not one of those great masters, whose missi dained by Providence was to reveal the Polish sc the gift to make this revelation with Chopin's Only in his music, alternatively tender and storm and passionate, moving and vigorous, and which from the metrical and rhythmical discipline and endure the metronome—only in this music one feels and recognizes that our whole nation, our ow try, that whole Poland lives, feels and acts in *rubato*."—Ignace Paderewski.

The Art of Alexander Nikolaievitch Skriabin



By SIEGFRIED LAVOIE-HERZ

SKRIABIN AS A YOUNG MAN

[EDITORIAL NOTE:—*In accordance with its policy of keeping the readers of* THE ETUDE *Music Magazine informed upon all phases of musical art as seen from different angles, we present the following dithyrambic appreciation of the art of Skriabin (pronounced Skrabcen and often spelled Scriabine).* THE ETUDE *is not always in complete editorial sympathy with the articles it publishes; but it frequently brings forth articles by intelligent and experienced writers, with points of view different from our own, for the express purpose of giving the reader different thought channels and permitting him to make decisions not dictated by any one editor or group of editors. We feel that the present writer is perhaps too chauvinistic in this article. We confess to a great fondness for many of Skriabin's notable works. Others do not appeal to us.*

Skriabin was born at Moscow, January 10th, 1872, and died there April 27th, 1915. At first educated for a military career, he turned toward music and studied under Savonof and Taneiev. He lived for some time in Paris, Brussels and Amsterdam. Later he became Professor of Pianoforte Playing at the Moscow Conservatory. His earlier works bore some slight resemblance to those of Chopin; and he has been rather inappropriately called "The Russian Chopin" for that reason. In later life he turned from the very exquisite and polished style of his youth to one that became more iconoclastic than most of his contemporaries. In fact, many have felt that his later style is quite dysphonic. Others with caviar tastes have become uncontrollably fond of Skriabin with his "mystic chords" and his fanciful comparison of music with colors. That he had the powers of a master and wrote in masterly fashion is admitted; but what the final assay of his works will reveal, when they have passed through the laboratory of Father Time, is still unknown. One of the delightful earlier compositions of Skriabin appears in this issue of THE ETUDE.]

ALEXANDER NIKOLAIEVITCH SKRIABIN

ORE AND MORE the name of Alexander Skriabin (1872-1915) is coming to the front in the musical d. As with all true geniuses, it has considerable time for Skriabin to cognized; and it will be many, many before some of his works are thorly appreciated, even by a small group. herein lies the difficulty in understandand appreciating Skriabin's works, ially his later compositions? The ulties are not with the creator of the rpieces, but with the insufficient ity of the listener to grasp the ideals ideas of the composer. The true r creates a work of art free from ational and personal influence, free all thought of gaining fame or rial advantages. True masterpieces reated unselfishly, just for the glory he beautiful and sublime in life. efore the imagination does not bind to nature and human life, but strives t humanity to spiritual heights where uman soul feels itself at one with ion. Skriabin wishes his art to carry an unusually elevated plane; and, fore, we come to a full appreciation s genius only by comparing him with reatest geniuses in musical art. We selected for this purpose four of greatest: Bach, Mozart, Beethoven, Wagner.

Bach's Exalted Place

HY does Bach hold the exalted place conceded to him in the musical l; why is he regarded as the greatomposer of all? Bach's works are urest musical offerings which ever been presented to us; and the spirit e ideas expressed in his art is so , so pure, that he brings us into nly spheres, where man is almost igured into a spirit-being. There is erature hardly an example similar ch. The nearest to him in spirit is us; and perhaps for the same reoth are comparatively little under-

Few individuals can feel the lofty s in which Bach reigns. The same duals who appreciate the "Upani-," Dante's "Divine Comedy," Goethe's t," and Nietzsche's "Zarathustra," e most likely the ones who fully stand Bach and Skriabin.

iabin in his later works, like Bach, us out of our earthly surroundings eights where the human body ceases felt as body, where physical phenomo longer seem to exist in reality. rarely can an interpreter be found ceive such elevation and purity of xpression. Certain works of Skriabin d on the part of both performer stener a corresponding mental devel-it and high psychic aim, for their adequate comprehension, appreciation, and interpretation. In Bach and Skriabin we feel the soaring of the better self in all mankind; both are true mystics and both possess a deep religious nature.

The Sublime Mozart

WHEN we now compare the works of Mozart and Skriabin, we are first overcome by the strange feeling that these two have little or nothing in common; and still there is one musical plane on which Mozart and Skriabin meet. Where is there a genius who has given us in his work such pure joy, such golden sunshine, such fairylike lightness, such exquisite feeling, such expressions of sublime beauty, as Mozart? And all this can truly be said also of Skriabin. The delicacy of expression and fineness of texture in Skriabin breathe the very spirit of Mozart; and as unlike as both seem to us on first thought, we have, indeed, two very closely related spirits in Mozart and Skriabin.

The sublime heights in which the spirit of Bach and Mozart moves, are not always the abode of Beethoven's thoughts. His adagios, indeed, have their home in these lofty, serene spheres; but at times he abandons this divine realm of artistic creation and comes down to our glorious earth, to speak to us in a more human language. Beethoven's art expresses well the thought of his contemporary, Goethe: "Two souls, alas, dwell within my body." Most works of Skriabin express the struggle of these two forces battling against each other. We are thrust as into Cyclopean battles; but always the spirit of lightness, the positive spirit, is victorious. No matter how deep down Beethoven or Skriabin bring us, at the end our spirits are guided to and stray on lofty heights.

Beethoven and Wagner

WE HAVE seen how Beethoven descends from heavenly heights into the valleys of the earth, and translates the language of the gods into expressions of the human soul. Wagner works in exactly the opposite way. Wagner's genius succeeded in translating human passions into divine language, in raising human love to divine love, in transforming our earth into spiritual spheres. Wagner achieved the transfiguration of all human passions: love, hate, pain, joy. There is hardly a composition by Skriabin where such is not the case, and at times he even adds to the magnificent structure Wagner has left us. Such ecstasy as Skriabin expresses in his symphonies and some of his pianoforte sonatas, makes them peaks in artistic creation never reached by anyone before him.

Considering the variety of elements of which Skriabin's genius was composed, we stand in awe before a composer of the first rank, who has written his greatest works in a language eliminating all national characteristics and colors, who is the first Russian creative genius to become international in the same sense as a Bach, a Shakespeare, or a Michael Angelo. This is where Skriabin as a musical genius stands; we come now to his equally important and perhaps more important position as a great man of true prophetic vision.

The great movement and effervescence in the art-life of our epoch signifies a critical point, a turning point in our whole life and civilization. This turning point opens a new perspective on immense distances, where, out of new conflicts, new victories will be gained for humanity. The great disunion which permeates our present day world, which makes man ailing, weak, and in need of recuperation, appears in a certain degree as a contrast between life and art.

Skriabin's Later Art

IN SKRIABIN'S later works, beginning with the fifth sonata for pianoforte, the master's aim was to reunite art and life, to reconquer a view of the world, that is, to create anew and to lay a foundation for a view of the world through which man again might learn to see beauty and to create beauty. Skriabin's great and daring deed was that he proclaimed in the most fervent expression of the soul what all deep spirits had already long felt in theirs: *that all truly great human life bears in itself a longing to create art as the most noble and highest vocation of man; that all human civilization, without vigorous activity of the art-force of the human soul, would serve only bestial coarseness and barbarism.*

Life and art, thus united in a harmonious whole, is the realization of Skriabin's work. It is therefore quite logical that Skriabin should see the same laws working in nature as in art, and thus evolve out of Nature's chord his musical expression, following the laws of acoustics. It is erroneous to say that Skriabin founded a new scale! He did, however, invent a practically new art of musical expression. He constructs a certain series of tones to serve as a fundamental chord, which suits the particular feeling he wants to express in his work, and out of this one extended harmony, accepting the whole series of intervals, seventh, ninth, and thirteenth, as a concord, using it only on a very few roots, he evolves his magnificent structure. It is in this manner that Skriabin has revolutionized music.

A Steady Advance

THE STEADY onward progression in Skriabin's art is very remarkable. The progress of evolution is clearly marked in his works. With every new opus he makes a definite step forward in technic and expression. Following his works through his early compositions for piano, his many Preludes, Studies, Poems and Sonatas, or his compositions for orchestra, we can clearly see the various stages in the evolution of his scale. This progression is particularly noticeable in the conception of his works for orchestra. His first Symphony is called a "Hymn to Art." His third Symphony, "The Divine Poem," expresses the spirit's liberation from its earthly fetters, while his "Poem of Ecstasy" voices the highest of all joys: creative activity. In "Prometheus" he reached the highest point of ecstasy, which was to have been carried further still by his proposed "Mystery," in which sound, color, and movement were to be united in expressing one fundamental religious idea.

Skriabin, by means of his music, was striving to obtain that state of ecstasy which a mystic like Plotinus calls "illumination." It is not in thought, however, but in feeling that we discern the infinite. Therefore the ancient Hebrews wisely required music as the medium for divine inspiration, in the schools of their prophets. This proves that not conceptual speech, but music, rather, is the element through which we are best reached by mystical truth. When Skriabin gives us his offerings, be it the "Poeme Nocturne" or "Vers La Flamme" or "Prometheus," they are not expressions of religious experience; these works *are* religious experience itself.

We never should rationalize our most sacred instincts. We cannot translate the

music of the soul into the vernacular of the intellect. Like music, ecstatic experience is an unanalyzable state of mind. We could say, in the words of Spinoza, "Music is that which is in itself and is conceived through itself." To sound the depth of mystical music as Skriabin has shown us how to do, is to come into touch with that which is the very quintessence of spiritual beauty itself. Hence the future of music as the aesthetic organ of the religious consciousness, abounds with immense possibilities, and we know of no music so entirely spiritual as that of the later Skriabin, which for this reason is of inestimable value precisely in our present generation.

Back to Fundamentals

TO ACCOMPLISH this, Skriabin, the philosopher-musician, goes back to the fundament of life, of nature, out of whose mysterious depths spring forth all wild and passionate desires which in man strive after form and expression. To form joy out of pain, to transform the most shattering tragedy of death into the forces of life, to intoxicate one's self with the unfathomable for the purpose of creating dream-pictures in the divine inebriation of the soul—this is the purpose of music for Skriabin.

In this music, man, the incarnated dissonance, the eternal personification of life and death, liberates himself and triumphs over his whole contradictory being, to form the transfiguration of death, to create forms in which he celebrates his own salvation from the somber side of life. Here music is no longer mere play and jesting; it is the highest and yet the most joyful solemnity; it returns again, to serve life. It proclaims to us in overwhelming and prophetic tone-phrases that we have missed the understanding of life by far, when with rule and quadrant we measure its length and breadth. It tells us that nature is not wholly defined by the scientist armed with the microscope and telescope. It teaches us to listen to the wafting of a spiritual force, the roaring of which we indeed hear, but whose source and goal we never will know.

This spiritual force brings forth elemental forces, instincts, passions, and friendships, which man is capable of forming and developing, to which he can give measure and direction, but whose coming and going, ebbing and flowing, are not within his power. Divine inspirations and divine visions are the true elements of human life. In these the soul in itself feels a creative life; in these it is itself a proof that its constraint is no slavery, but freedom, that its deepest woe is a creating life, a creating joy!

Skriabin's "Credo"

IT IS very significant that Skriabin did not attribute an all too great importance to the creative activity within his musical capacity. Constantly the most profound and most difficult problems which human spirit has tried to solve, occupied his mind. Art should cease to exist as an independent form of expression for the creative spirit, according to Skriabin's metaphysical conception of it. Art was to dissolve itself and was entirely to be absorbed by a much more deeply affecting creative activity, which would touch the very roots of all being.

This conviction was based upon Skriabin's mystical-philosophical view of the world, with which his art in all its expressions was inseparably united. The one idea which dominated the whole life of Skriabin, as well as his thoughts and work, was fundamentally an idea of liberation. The "Mystery" which appeared to him as the highest expression of his artistic life's work, as the sole aim and sole meaning of his existence, was not only to be a work of art, but a cosmic act, the completion of a macrocosmic and microcosmic process: salvation for humanity from the chains of the prevailing mode of existence. The idea of the "Mystery" was based on two fundamental thoughts: the thought of a magic power of art, especially of music, to call forth undreamed spiritual and perhaps even physical powers, and the thought of the self-glorification and self-assertion of the creative spirit, the "Yea Saying" in the Nietzschean sense.

The psychic reaction to art may be extremely diversified as to type. It may vary from a purely aesthetic, disinterested pleasure, to the deeper reacting spiritual process of purification, the catharsis of the old Greeks, or to the calling forth of the highest spiritual reaction, ecstasy, the extreme consequences of which lie already beyond natural happenings. The passionate longing and painful searching for the meaning of art and life itself, guided Skriabin at last to heights of radiating self-assertion. He endeavored to perceive in the depths of his own artistic consciousness the essence of the general principle of creation.

Skriabin thought himself conscious of the fact that he was free in his creative activity, that his "ego" was the creator of his world, that it was he himself who called forth to life the pains and joys of this world. He perceived that on the play of change, of contrasting emotions and experiences is based the only eternal meaning of creation. Skriabin was further cognizant of the fact that this process always and everywhere is aimless in itself, although at all times and everywhere imaginary aims have been fathered upon it, to which it apparently strives with elemental power, although it really created them itself—just as the artist never comes to rest but always piles new obstacles in his way, again and again, in the overcoming of which he finds pleasure, and stakes for himself always new and further distant aims which he tries to reach in never satisfied longing.

The Final Analysis

THIS analogy brought Skriabin to a final analysis. He had to make the step from the microcosm of his own ego to the macrocosm of the edifice of the uni-

(*Continued on page 399*)

How Shall I Memorize ?

By Isabel Denison Hilton

THE eternal fear of forgetting drives many a musician to despair. The occasional lapse of memory, in itself, may not be serious, but the nervousness, caused by improper and careless memorizing, *is* serious, and often mars the performance of an otherwise talented artist. Fear is assuredly the first step to failure; hence every condition which provokes it should be removed if possible. It robs the performer of the joy which every true artist should feel when imparting the beauty of his art to others, a pleasure which if lacking on the part of the artist will be lacking as well on the part of the audience.

Too few students are trained in proper methods of memorizing. Memory work is assigned but the student is left to accomplish the task in any way that he can devise which is seldom the best way.

Probably the easiest and quickest method of memorizing which the majority of students will use if left to their own devices, is that of finger memory. This ability of the fingers to reproduce mechanically after numerous repetitions is natural with the majority of students and requires practically no mental effort. It comes easily; but many have found to their sorrow that it goes easily during public performance. Such a student trusts to his fingers alone to find their way through the intricate mazes of a composition, just as a driver, caught out on a dark night, trusts to his faithful horse to keep the road and find the way home. The trouble comes, however, when the player, under the stress of public performance, becomes distrustful of his fingers, takes the reins, as it were, and attempts to drive without any mental knowledge of the road, and consequently loses the way.

A second method which comes easy to many students might be termed for purposes of this article, eye memory. By it the student is able to see his music before him after the book is closed, because the visual impression of each note is retained. This faculty, while it should not be relied upon exclusively, is a great asset to those who possess it.

A third method, used by many students, might very simply be termed ear memory. When the musical ear is very keen and alert, it greatly facilitates the process of memorizing by easily retaining melody and harmony.

While none of these three methods should be relied upon alone, each has its place and value in developing and making possible a practically infallible memory. But the teacher must insist that there be in addition to these, a solid foundation knowledge of the piece in hand. And such can come only by hard, concentrated study of one measure at a time, until all is so mastered that the student can write it out or think it out, away from the piano, if necessary, or be able to begin playing in the middle of any measure or phrase that the teacher may designate, and proceed correctly. It is said that Leschetizky recommended that his pupils memorize their compositions, before playing them at all, by learning each hand separately, a measure at a time, then putting the hands together with the music closed. To some this may seem like unnecessary drudgery, but nothing less can insure the proper mental poise in public performance.

If the pupil can do this and, in addition, is able to play from finger memory, by visualization, and by the help of a trained ear, then he is fortified four-fold against lapse of memory in public. In the measure that the student is able to use and combine these various memory aids, just to that degree is he immune from the fear of forgetting.

How Good Teachers Make Interest

By Ainslee H. Perkins, Jr.

By stimulating the pupil to ask questions—which are answered quietly and definitely.

By leading pupils to move and think leisurely in their work. Hurry militates against both music and general culture.

By giving tactful replies to pupils in all their queries.

By becoming not alone a teacher but as well a friend to the pupil.

By giving the student some angle from which to work, which will make practice interesting.

By being careful that the pupil is advanced to a new problem only after he has mastered the one in hand.

More Entertaining Piec

By George Coulter

MANY teachers make the mistak young pupils of having every piece gree harder than the previous one. do not reflect that a beginner's att is nearly always completely monop by reading mere notes and locating on the keyboard, and the fewer con ties of time, rhythm, or sharps an that are introduced, the less hamperc be the player's development.

For this reason—if the pupil is lightning assimilator—when he has tered a piece in one grade he sho given several other pieces of the standard. These will give him p confidence, and he will feel he has real grasp of what he already has l before getting involved in additional nicalities. Moreover, by this plan a ster quickly acquires a little reperto playable pieces, and is exhilarated consciousness of accomplishment. I the principle of each piece harder th last, the repertoire accumulates with ful tediousness.

Every player likes to have a num pieces over which he has entire con pieces which he can play in his r moods, and can render without f breakdown, alone, or in the prese auditors. And as we auditors know the youthful pianist is too often gra with a tough proposition which strain on all his powers. But wha can you expect; these are the pie has been given by his teacher.

How much better it would be o occasions if the player had a num easier compositions which he coul with assurance and gusto! This smooth the way for many a pianist pedestrian type, and possibly deli from much of that murderous j pianism which unmercifully afflic delicate nerves.

Testing Accuracy

By Eutoka Hellier Nickelsen

Can you explain the difference be

1. A tie and a slur?
2. A chromatic half-step and a half-step?
3. Simple and compound measur
4. "The smallest possible crossin "the largest possible crossing?"
5. The principal note and the a note of a trill?
6. Pulsation and Rhythm?
7. Absolute pitch and relative pit
8. Attack movement and incomp tack?
9. Homophony and polyphony?
10. Augmentation and diminution
11. Melody and counter-melody?
12. Musical punctuation signs a torical marks in music?
13. Being an impresario and being ductor?
14. Opera and oratorio?
15. Musical orthography and chirography?

A New Phase of School M

"Ever since the perfecting of the machine, and later the player-pian has been growing another new p school music which has brought decided change in the entire situati opportunity to study music itself, than about it, has metamorphosed th plan of study. Music appreciat now become the most fascinating, t vital phase of school music."

—*Mrs. Frances Elliott*

The Teachers' Round Table

Conducted by PROF. CLARENCE G. HAMILTON, M.A.

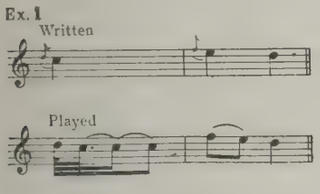
This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory, History, etc., all of which properly belong to the Musical Questions Answered Department. Full name and address must accompany all inquiries

PROF. CLARENCE G. HAMILTON

The Location of Grace-Notes

letter has recently come from Professor Emil ke, of Dresden, in which he disputes the statement I made in last September's ETUDE that, as a rule, ort appoggiatura, or "grace-note," should come di- on the beat. He says:

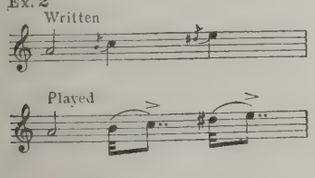
> There are two different kinds of grace notes, the ng and the short. The first one may be recognized nmediately by the little bar which goes through the eck of the note: . These should be played just as heir name indicates, *before* the principal note, be- re which they are placed. This is just contrary, herefore, to your explanation in Example 2 of the ttle notes in Example 1, which have the bar through ne neck.



s, therefore, up to me to cite authorities in support y position,

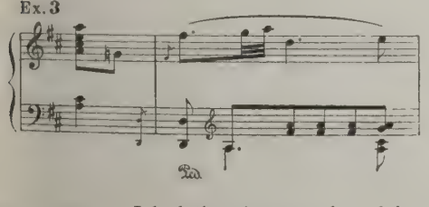
the article *Appoggiatura,* in Grove's *Dictionary of c and Musicians,* Mr. Franklin Taylor says:

> (The Appoggiatura) consists in suspending or de- aying a note of a melody by means of a note intro- uced before it; the time required for its perform- nce, *whether long or short, being always taken from he value of the principal note.*



then gives examples of the way in which the long ort appoggiaturas should be played, such as the fol- g:

Ex. 1



the Cotta Edition of the classics (one of the finest an editions), the above rule is strictly adhered to e explanatory footnotes. For instance, the grace- in the first movement of Mozart's *Sonata in C r* are thus explained:

Ex. 2

similar position in regard to the classics is taken by ard Dannreuther in his valuable and comprehensive on *Musical Ornamentation* (two volumes). Com- o the nineteenth century romanticists, he shows how sionally, however, the grace-note anticipates the prin- note. Schumann, especially, took pains to point out an exception by printing the grace-note in the ous bar. Here is a case from his *Sonata in F sharp r,* Op. 11, where the grace-note in the left-hand is clearly anticipatory, while that in the right-hand comes on the first beat:

Ex. 3

me years ago I had the pleasure of studying with Dannreuther, and remember his insistence on the ral rule that grace-notes should replace the note h they precede. Chopin and Schumann, he said, particularly stressed this rule. At the Library of Congress in Washington I recently examined Chopin's original manuscript of the *Mazurka in B Minor,* Op. 33, No. 4, and noted how carefully he placed the grace-notes over their accompanying basses, as at the beginning:

Ex. 4

Undoubtedly there are many of the grace-notes in the works of modern composers which are intended to be anticipatory. Such ambiguity is one of the many defects in our musical notation—defects that can be remedied only by the good taste and judgment of the performer. But, despite these exceptions, the weight of authority seems overwhelmingly in favor of my statement that a grace-note should, as a rule, be played in place of the note to which it belongs, which is sounded immediately after.

Use of the Pedal

> In Beethoven's *Sonata,* Op. 31, No. 2, measures 99 and 100, should the damper pedal be held down continuously, or should it be released for the three staccato notes of the motive in the bass? I have played it the former way, but recently heard a musician of authority play it the latter way, and wondered which is correct. J. B.

Inasmuch as Beethoven himself gave no explicit direction for this passage, one may consult his own taste and sense of fitness. Remembering, however, that the pedal was more sparingly used in Beethoven's time than at present, also that the classic composers stressed clearness of outline and of utterance, I am inclined to favor the second way you mention, with, however, a touch of the pedal on the third staccato note, since it comes on the accented beat of the measure. Hence the passage would be played:

Very Young Children

Before me are letters from Mrs. B. G. K., Mrs. C. P. C., and Mrs. N. E. C., all asking advice as to how to teach children whose ages range from four and a half to six years.

I know of no better materials for this purpose than the two books by John M. Williams—*Tunes for Tiny Tots,* and *First Year at the Piano.* The first of these presents little tunes with attractive words. Both clefs are employed from the first; and the hands are used in alternation throughout. The second book starts in similar fashion, but is more extensive in scope.

To make lessons a success with such young aspirants, teaching and practice periods should be very short—not over twenty minutes each. Mothers must also be taught to coöperate with the teacher, by regulating and supervising the practice.

An excellent supplement to these short individual lessons is kindergarten class work. Form a group of at least three or four of the "Tiny Tots," and arrange for them to meet once or twice a week. You will find inspiration for this work from the *Musical Kindergarten Method,* by Daniel Batchellor and Charles Landon, and from *Half Hour Lessons in Music,* by Mrs. Hermann Kotschmar. Such group work will whet the interest of the children, and will give them a good drill on foundational material.

A somewhat different problem is presented by Mrs. E. M. B., who says:

> I am writing for advice as to how you would teach my little daughter, just six years old. She seems to be exceptionally gifted. I have been her teacher for two years.
>
> To begin with, she has perfect pitch, and improvises pretty little pieces, making use of different cadences. She sang her first melody when but a year and a half old, and at two and a half sang over one hundred and fifty songs. She transposes and plays easily by ear. She will sit down suddenly and play, for example, Schumann's *Merry Peasant* perfectly; yet I have never taught it to her, and may not have played it for years.
>
> Please tell me if you consider her talents abnormal, and what books I should take next.

Certainly, your little girl seems to be particularly gifted and ought to develop into an exceptional pianist. Do you know H. Lemoine's *Fifty Juvenile Studies,* Op. 37 (two books)? These are very melodious and attractive, and are written especially for small hands. Along the same lines is Burgmüller's *25 Easy and Progressive Studies,* Op. 100. Meanwhile, there are plenty of easy classics, such as Bach's *Little Preludes and Fugues* and Schumann's *Children's Pieces,* Op. 68; as well as a plentiful supply of well edited modern pieces. Don't force the little daughter, however. Make her music hour a real joy!

Hearing Music

> My pupils have no opportunity to hear good music and performers, as I live in a small town, where concerts are rare. How can I better these conditions? V. P.

As a piano teacher, you ought to pull every wire to remedy this serious handicap; for nothing is so necessary for music students as listening to expert performances.

Can you not yourself furnish some of the needed opportunities? Gather your pupils together at your studio occasionally, and play to them a short program, prefacing each piece by a few remarks as to its composer, themes, and the like. After playing the piece, ask questions about its form, melody, rhythm, and any individual features. Perhaps you could broaden the program by calling some singer or violinist to your assistance.

Again, you may arrange to have a program played by pupils, with explanatory remarks and questions, as suggested above.

Possibly, too, you may be able to interest enough people in your town to subscribe for a series of recitals by leading artists. A determined effort of this kind may bring lasting results in arousing musical enthusiasm in your community.

Finally there is the possibility of obtaining one of the better class of player-pianos, by means of which pupils may hear faithful reproductions of the performance of expert pianists. We now have opportunities of this nature such as have been offered to no former generation, and which bring the cream of pianistic interpretation within the limits of the smallest town!

Studies for a Young Pupil

> What book do you advise for a seven-year-old child after she finishes John Williams' *Very First Piano Book?* MRS. T. S. L.

For technical studies, give her the second book of E. Biehl's Op. 7, or Brauer's Op. 15. These studies may be made especially useful by playing them at different rates of speed and degrees of force. They may be alternated with such phrasing studies as Burgmüller's Op. 100.

The Musical Scrap Book

Anything and Everything, as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

THOSE IGNORANT RUSSIANS

"We may be sure that the music of the twentieth century cannot live any more by theory than the music of the seventeenth century could," remarks Ernest Newman in *A Musical Critic's Holiday*. "Music is itself, one and indivisible; it will not submit to be deprived of this or that mode of expression, this or that resource of technic, by composers who happen to have no use of them because they have no sense of them. . . .

"Russian music of the last half century, indeed, supplies us with corroborative evidence of this. The 'Five' in their early days, revolted against the symphonic 'working-out' very much as the Florentine monodists did against counterpoint. The explanation was the same in each case; the men despised an art in which they themselves were not particularly proficient; it was the tailless monkey trying to induce the rest of the tribe to abolish tails." (Surely here the distinguished English critic is referring to the tailless fox!) "The Russians, in truth, had a very imperfect idea of what 'working-out' meant, and of the differences between the working-out of a Beethoven and that of the ordinary academic symphonist.

"They would play German symphonies in piano duet form, and would say, when the working-out began, 'Now we come to the mathematics.' Their own music has convicted them of having been almost completely lacking in that sense of logic in music that controls the working-out of an organic mind like Beethoven's. They could not 'develop' their music; all they could do was to string tune to tune. The world has grown a little tired of their picturesque helplessness in construction; their instrumental art, for all its color and its charm, is, like that of Caccini or Peri, essentially childish, or at any rate childlike."

"Knowledge of musical essentials acquired late comes only through hard work. They should be learned early."—Bispham.

RIMSKY-KORSAKOFF IN NEW YORK

That Rimsky-Korsakoff visited the United States while serving as a midshipman in the Russian Navy may be news to many Etude readers. A brief biography of this composer by William H. Humiston contains the following description of his experiences here.

"He was graduated from the Naval College on April 20, 1862, and was appointed to serve as midshipman on the *Almaz*, which was ordered on a three years' cruise. Backed up by Balakireff, he tried to persuade his family to allow him to give up the navy for a musical career, but in vain.

"The *Almaz* sailed November 2, 1862, and the three following years were musically barren, except for the composition of the *Andante* to his symphony, and musical impressions received in London and New York. The *Almaz* was anchored in New York Harbor from October, 1863, till April, 1864, nearly seven months. During this time a party from the *Almaz*, including Rimsky-Korsakoff, visited Niagara Falls. In New York Rimsky-Korsakoff heard a performance of Gounod's 'Faust' and Meyerbeer's 'Robert.' He also heard some American music—'the American popular melodies and songs of that time pleased me very much, as they manifested a plaintive note mixed with much abandon.'"

In a footnote, Mr. Humiston remarks: "No song is mentioned, but undoubtedly some of the melodies of Stephen Foster were among the ones heard by Rimsky-Korsakoff."

THE SATANIC PAGANINI

"Until he was forty-four years of age, Paganini did not play anywhere except in the cities of Italy," says Henry T. Finck, in *Success in Music*. "In 1828, at last, he left his native country and gave a series of concerts in Vienna which aroused frenzied demonstrations of enthusiasm. He now conquered the rest of Europe, with financial results indicated by the fact that at his death (1840) he left his son $400,000.

"So astounding was the effect of his playing on his audiences that all sorts of fantastic stories were invented to explain his success. One individual in Vienna told Paganini himself, that he had distinctly seen the devil directing his arm and guiding his bow. Some felt sure he must be the devil himself, and his appearance and influence on the stage seemed to bear out this idea. As his Belgian biographer (Fétis) remarks: 'The extraordinary expression of his face, his livid paleness, his dark and penetrating eye, together with the sardonic smile that played about his lips, appeared to the vulgar, and to certain diseased minds, unmistakable evidences of satanic origin.'

"The famous German writer, A. B. Marx, describing Paganini's first concert in Berlin, said: 'There was an overture, and then, unheard and unexpected, like an apparition, he was in his place and his violin already sounding while the multitude still gaped breathlessly at the deathly pale man with deep-sunken eyes sparkling in the bluish-white like black diamonds; with the overbold Roman nose, with the high forehead emerging from the black mass of wildly tangled hair . . . he seemed like one bewitched, and the audience, myself included, certainly was bewitched by him.'"

VERDI'S CAPABLE TEACHER

Denied admission to the Conservatory of Music in Milan on the singular ground that he lacked talent, Verdi had to look elsewhere for that training which he had hoped to obtain, declares F. J. Crowest in his biography of the composer of *Aïda*.

"'Think no more about the Conservatory,' said his friend Rolla to him. 'Choose a master in the town; I recommend Lavigna.'

"Vincenzo Lavigna was an excellent musician, and conductor at the theatre of La Scala. To him, accordingly, Verdi went for practical stage experience and familiarity with dramatic art principles. This was in 1831, when the pupil was eighteen years old. Lavigna could not have desired a more exemplary pupil than Verdi, and the master lost no time before taking his charge into the broad expanse of practical theatre work. All the drudgery of harmony, counterpoint and composition generally had been learned and committed to heart long before; it was the practice and experience in the higher grades of planning and spacing libretti, and the scoring of scenas and concerted numbers for operas that Verdi needed. This Lavigna could and did give him. Verdi, on his part, showed such aptitude for dramatic composition that Lavigna was greatly pleased. 'He is a fine fellow,' said Lavigna to Signor Barezzi, who had called to inquire as to the progress of his *protégé;* 'Giuseppe is prudent, studious, and intelligent, and some day will do honor to myself and to our country.'"

THE HAND OF NIKISCH

Mme. Melba's "Melodies and Memories," which have been appearing in *Liberty*, contain the following charming reference to Arthur Nikisch, long conductor of the Boston Symphony Orchestra.

"Whenever I think of Nikisch," she writes, "I think of that lovely phrase in 'Faust' when *Marguerite* appears at the height of the revels, and the music slows down and softens while she sings:

"'Non monsieur! Je ne suis demoiselle, ni belle,
Et je n'ai pas besin qu' on me donne la main.'
(No, sir! I am not a great lady, nor beautiful,
And I have no need to take anybody's hand.)

"It was at Covent Garden that I first sang this phrase to Nikisch who had never heard me and, to my astonishment, as soon as I had finished that act, in which I have not another phrase to sing, he came 'round kissed my hand, and said:

"'Madame Melba, I know from your rendering of those few bars what a great artist you are. I don't want to hear any more.'

"What a genius Nikisch was! He had one little vanity by which I shall always remember him: his beautiful hands. They were always white and supple, and throughout the winter they were encased in long fur gloves. It was, after all, a pardonable vanity, for Nikisch's hands were his fortune. He did many little things to draw attention to them, and I have heard that his long white shirt-cuffs, which I remember waving in front of me on many occasions, were specially designed to set off his hands."

"Music already holds an unassailable position in our daily activities; it will presently occupy a still greater place. Nothing is still, and least of all does art remain fixed. The whole world is awakening to a new standard of values, for we have at length discovered the impossibility of running civilization on purely materialistic lines."

—H. Ernest Hunt.

"WHITE GLOVES ON A SILV SALVER"

John Philip Sousa, whose re cences have been running in the *Sat Evening Post*, quotes an old copy c San Francisco *Argonaut* regarding J a distinguished predecessor of Sousa self in the art of conducting:

"He (Jullien) used to say of hi that his vocation in life was popula music. He was a Frenchman, and many Frenchmen, nothing if not thea Those whose memories go back forty will remember him as he used to a graciously smiling, in an enormous waistcoat, with huge wrist-bands f back over his coat-sleeves, bowing thanks for plaudits. As he stood i the footlights, a valet in full dress br him a pair of white gloves on a silve ver. Having donned these, and seize jeweled baton, he gave the signal, and capital music indeed ensued.

"As he still figures as the prin bandmasters, it is sad to recall the h ness with which he was treated by fo throughout his life. He made mone his concerts, but invested it in a lea Drury Lane, which landed him in l ruptcy. He wrote an opera and brou out at his own expense at Covent Ga it was a total failure. His entire in trade was destroyed by a fire. started a company to give garden conc it went to smash, taking Jullien with

"Driven out of England by povert went to Paris, ran into debt, and wa prisoned at Clichy. His friends in don were raising money to clear him the news reached them that he had suddenly."

"I use a loose bow, because I can staccato better in this way."

Joseph Joach

ROSSINI'S ORCHESTRATIO

Rossini's contributions to the art o chestration, somewhat ignored these are well recognized by Adam Carse i interesting "History of Orchestration

Rossini, he reminds us, "took the le keeping the pure and elementary colo the orchestra clearly differentiated, a some extent counteracted a tendenc wards monotony, which was caused b constantly employing various types of color in neutral tinted and non-chara istic combinations. Rossini's solo parts out in strong relief against the harm backgrounds of his accompaniments clear utterance of melodic wind-parts i blurred by sustained harmonic paddin voices of too-closely related tone-c contrapuntal decoration interferes wit function of neither melodic nor accomp ing parts, and neither lose their identi the result of over-blending or interm the colors.

"These were features of part-distrib misunderstood by many a more prof German composer of a later period; tures which remained excellent chara istics of French orchestration al throughout the nineteenth century. Al any of Rossini's opera overtures will vide examples of judiciously accompa wood-wind solos, and of clearly contra decorative counterpoint on the part of e string or wood-wind instruments.

"As a practical horn-player, Rossin joyed some advantage over other compo when writing for natural horns with a use of stopped notes. His chromatic m dic and harmonic horn parts are mang more successfully and more effectively in the case of Beethoven's elaborate such as those in 'Fidelio,' and in the 'N Symphony.' This was largely due to sini's good sense in keeping each part w a more limited compass, and more conj in motion."

Great Orchestral Masterpieces

As Heard in the Concert—Over the Radio—On the Talking Machine—and in the Movies

Described by VICTOR BIART

Late Official Lecturer of the New York Philharmonic Orchestra

Liszt's Magnificent Tone-Poem, "Les Préludes"

HE orchestral works of Liszt take us into the realm of program-music. In contradistinction to ab- music, which has no further purpose its own intrinsic beauty, program- is intended to depict or illustrate a ct. This "subject" is, therefore, the am that underlies the work. The of program-music is instrumental mu- or only instruments can produce the y of tone colors essential to portral llustration. Program-music is a log- esult of romantic music, which in- ental music was inaugurated by oven, in the opera by Weber, and greatly stimulated by the romantic ture of the nineteenth century.

mantic music is so vividly expressive loquent that it often suggests a scene ituation, without further indications ecifications by the composer. Details gnificance are the prerogative of indi- l interpretation. This latitude of in- etation is a particular feature of the ntic music of the nineteenth century. marvelous development of the ex- ional and descriptive powers of music e hands of the romantic composers, lates their own fancies and imagi- ns more and more, awakens them ly to the possibilities of music to arouse in emotional feelings and to create s. By creating music tending to arouse eelings stirred by a poem, the arts of and poetry can be made to join hands. n the music is brought into comformity the character of the subject of a poem, part of a poem, it stimulates the mind e hearer and intensifies the expression ne poem. The music thus acquires a c content, and this process of com- ion is termed characterization. In this ner the salient and characteristic traits moods of the various subjects of an en- tory can be illustrated in music.

t program-music is not limited to this eation of abstract conceptions. Many rete things can be illustrated in music mitating sounds which they produce. as the rumble of thunder, the howl of wind, the roar of the ocean, the ripple brook. Certain motions, also, can be ted by rhythmic analogy. Instances the rotation of a spinning-wheel, the latory gliding of a boat under the im- of the oars, the gallop of a horse, actions of persons. This depiction of subject itself is called realism, as op- d to the idealism of the method ribed as characterization.

Liszt and the Symphonic Poem

his *Pastoral Symphony* Beethoven rs realistic ground with his description he rural scenes, the singing of birds, rumble of thunder, the storm, and so n. But the actual protagonist of the movement was Hector Berlioz (1803- a brilliant Frenchman, in musical mat- a revolutionary, who embodied the ciple of the literary basis or "program" s *Symphonie Fantastique* and his titled estral works, in which, through his ng experiments in instrumentation, he me the father of the modern orchestra, great palette of tone colors. The field rogram-music, thus illuminated, rapidly acted a host of eminent composers, who a brilliant lustre on the pages of tenth-century music history.

the vanguard of these composers was destined to play an epoch-making part in symphonic music, a man whose importance is popularly supposed to lie exclusively in his undisputed status of king of pianists, and, as a composer, in his invention of the *Hungarian Rhapsody:* Franz Liszt (1811-1886).

The symphony, the greatest creation of the classical period, had proved itself a type of composition or form admirably suited to the style of music that evolved it, namely, absolute music. Its scheme of movements, as well as their individual plan of construction, met every requirement of this style of music: contrast, unity and logic. With the growth of program-music, however, it eventually became evident that this definitely established form could not fit every series of moods or pictures, or every situation furnished by a poem or narrative. With the new style of music, therefore, arose the necessity for a form to fit the subject, a frame to fit the picture. This form Liszt invented in the symphonic poem for orchestra.

Structure of the Symphonic Poem

In its external aspect the Symphonic Poem differs from the symphony in that it is composed of an indefinite number of sections, one leading into another, instead of the definite number of movements in the symphony, each of which usually comes to a separate end. The number of sections in the symphonic poem is determined by the "program," *i. e.,* the various characteristics, moods, or situations to be delineated. These are indicated either by the title given to the work, or by a synopsis appearing by way of preface or argument in the score. This involves a certain mental participation on the part of the hearer which does not figure absolute music.

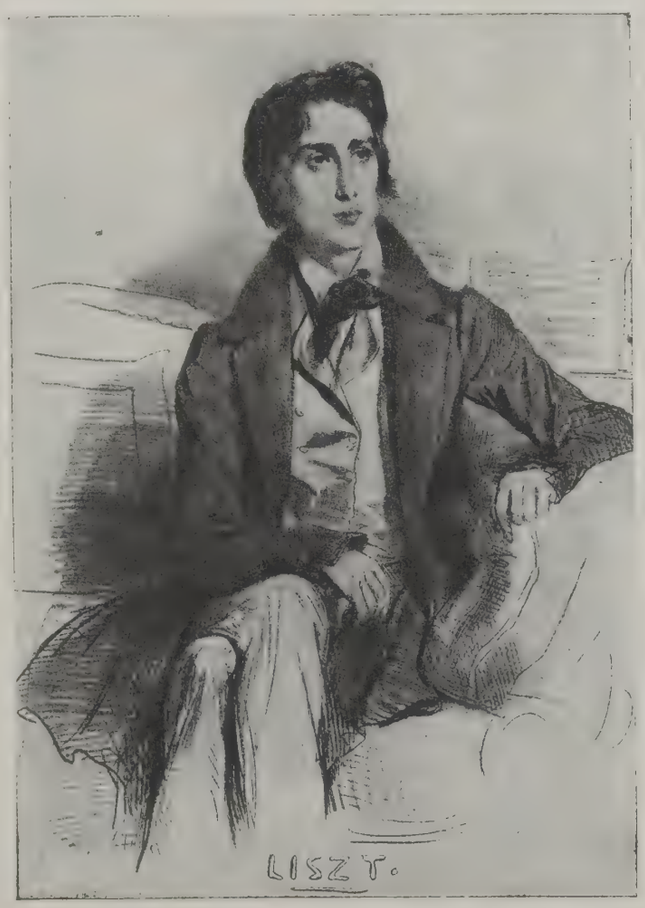
Transformation of Theme

The element of unity is provided by a clever and interesting device. This is termed transformation of theme. Several themes are evolved from one or more fundamental or basic themes by altering the latter, rhythmically, in tempo and mode of tonality. Each such transformation changes the character of the theme and symbolizes a different idea, characteristic, person, or subject. The genetic community of the themes forms the bond that unites the entire work into a vast whole. In this thematic treatment the student of Wagner will recognize the Leitmotif, or leading-motive, which serves the same purpose in the operas and music dramas of this great master of dramatic music. This alteration of themes did not originate with Liszt, for Schubert applied it in his great *Wanderer-Fantasy* for the piano, Berlioz anticipated it in his "idée fixe" and "mélodie caractéristique." The masters of counterpoint has subjected themes to similar treatment, such as augumentation and diminution, Other examples might be cited. It is from Berlioz that Liszt derived the idea. Under Liszt Weimar becomes the stronghold of program-music.

Feeling that the constant peregrinations of the virtuoso could never conduce to the attainment of his creative ideals, Liszt decided to settle in a small town aloof from the turmoil of the large city and the glamor of the concert-stage. In 1847, after a series of concert tours that had taken him through practically all of Europe steadily since 1839, he answered a call to conduct the Court Opera of Weimar, the capital of the small Grand Duchy of that name, in Germany. He had conducted the orchestra of this theatre off and on since 1842.

In this little town the great Magyar master unfurled his banner symbolical of the new style of music. Weimar thus became the centre of the new movement and attracted other musicians sympathetic to its cause, such as Raff, Bülow, Cornelius and others.

In this favorable and congenial milieu, Liszt composed or completed the twelve symphonic poems—to which he later added a thirteenth—which constitute a monument to his creative work, despite the dissension which they provoked and the bitter partisanship to which they gave rise. How fully Liszt availed himself of the opportunities offered by his conductorship of the orchestra is attested by the fact that, according to his own statements, he wrote three, and even four, versions of the first half of these works, trying them out with the orchestra until they met his satisfaction. This explains his mastery of instrumentation and his command of orchestral color.



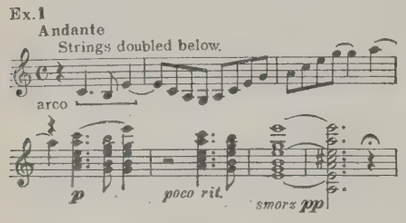
Les Préludes

The most popular of his symphonic poems is the third, *Les Préludes.* Accounts differ with regard to the time of the inception of this work. According to Nohl it was conceived in 1845 at Marseilles, completed at Weimar in 1850, and first produced at a concert of the Court Orchestra of the latter town in 1854. *Les Préludes* (The Preludes) is the title of a poem—one of the "Méditations poétiques"—by Alphonse Lamartine. As an indication of the poetic content of his composition. Liszt wrote the following in the score:

"What else is our life but a series of preludes to that unknown Hymn, the first and solemn note of which is intoned by Death? Love is the glowing dawn of all existence; but what is the fate where the first delights of happiness are not interrupted by some storm, the mortal blast of which dissipates its fine illusions, the fatal lightning of which consumes its altar; and where is the cruelly wounded soul which, on issuing from one of these tempests, does not endeaver to rest his recollection in the calm serenity of life in the fields? Nevertheless, man hardly gives himself up for long to the enjoyment of the beneficent stillness which at first he has shared in Nature's bosom, and when 'the trumpet sounds the alarm,' he hastens to the dangerous post, whatever the war may be, which calls him to its ranks, in order at last to recover in the combat full consciousness of himself and entire possession of his energy."

These are experiences of human life—love, the storms and battles of life, with their many vicissitudes, the solace sought in the communion with nature, the lowering by Death of the curtain that closes the drama of terrestrial existence, and *The Préludes* of Lamartine's poem furnish the program that the composition is designed to delineate.

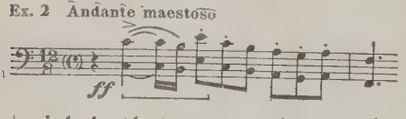
For this purpose, the work is divided



AN ETCHING OF FRANZ LISZT MADE DURING HIS YOUTH

into six interconnecting sections, each devoted to one of the subjects of the poem and forming one of the preludes. The scheme is as follows: I Introduction; II Love; III Storm; IV Rural Life; V Battle; VI Death—Conclusion.

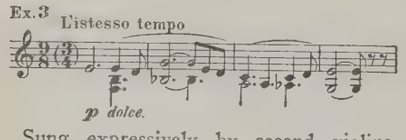
Analysis



The first section, *Andante,* 4/4, is solemnly intoned by all strings, plucked (pizzicato) twice on "middle" C and its two lower octaves. In the third measure, the first fundamental theme is introduced in solemn quietude by the same instruments, as follows:

Ex.1

The three simple notes of the first measure of this example, with the fall of a semitone, followed by a rise of a fourth, form the kernel of the theme. In the fourth and fifth measures, flute and clarinets shed a bright and beauteous light on this fragment of theme. The entire theme is then repeated in D minor, followed by its development by all strings and trombones, against a background of wood wind furnishing the harmonies. In steady ascent, attended with a corresponding *crescendo,* like an awakening, all rises to a climax on the Dominant of the key (C major) to usher in a new portion of this section, that which presents the first transformation of the theme. In the *Andante maestoso,* 12/8 (C), the theme is given this shape, in which it appears in majestic power:

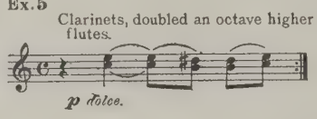


Ex. 2 Andante maestoso

Carried by bassoons, trombones, tuba, celli and double-basses, the theme in this form has been identified with Death—Death, which shadows Man from his entry into life until his departure from it. The animation is heightened by the energetic staccato 16th-notes of the arpeggio figures in violins and violas. The passage is impressive despite a certain empty grandiloquence.

The abatement of this passage leads into the section devoted to Love. At the change of measure to 9/8 (3/4), at measure 47 (*L'istesso tempo*), the theme undergoes its second transformation, now symbolizing the passage in the preface: "Love is the glowing dawn of all existence."

Ex.3 L'istesso tempo



Sung expressively by second violins, joined in unison, first by the celli, a little later by a horn, the theme here acquires a character of tender ardor. In the eighth measure it modulates to E-major, to work up in impassioned aspiration with interpolations of the theme by bassoons and double-basses, to the appearance of the Second Fundamental Theme, the Love Theme proper (measure 70):

Ex.4 Espressivo ma tranquillo

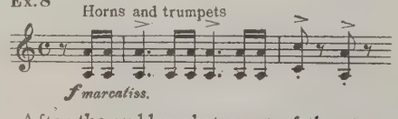
This expressive theme (in E major), replete with yearning, is assigned to a horn quartet, reinforced by violas. After ten measures it is repeated an octave higher by oboes, clarinets and bassoons, amidst commentary phrase-members interjected by violins and flutes, of typically Lisztian stamp, to be developed to its impassioned climax, which is reached on the Dominant of C-sharp minor. This section ends with abating strains of tender expressiveness, not without touches of sadness that significantly precede the forthcoming storm. This soft motive, derived from the theme itself,

Ex.5

is tenderly uttered by the flutes and clarinets, affecting the violins, which join with this closely-related motive:

Ex.6

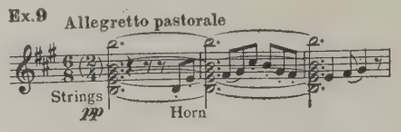
While the violins are "cogitating" over this theme, the horn tenderly calls out the first love theme (Ex. 3), with which the section dies out in flutes and clarinet. The Love Theme in E-major (Ex. 4), the Second Fundamental Theme, will play an important part later in the work.



With the third transformation of First Fundamental Theme (*Allegro non troppo, C*), which now appears in the celli, the Third Section, the one devoted to the portrayal of the storm, begins. The substance of the first portion of this section is the series of chromatic scale passages in the celli, followed by chromatic progressions in chords of the diminished seventh. These howling passages lead into the *Allegro tempestuoso,* 12/8 (C), in which the storm reaches its height. Another variant of this fundamental theme is

Ex.7 Allegro tempestuoso

Of martial vigor is the following closely related one:

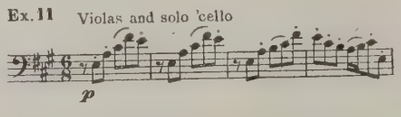


Ex.8

After the sudden abatement of the storm the oboe gently calls out the first love theme (Ex. 3), now in B-flat major (*un poco moderato*), to simple arpeggic accompaniment of clarinet and sustained bass in horn. Ten measures later the silvery strains of violins, appropriately supported by a soft harp accompaniment, repeat this theme in a radiant, exalted light. This passage leads fittingly into the pastoral scene, *Allegretto pastorale* (*Allegro moderato*), A-major, 6/8 (2/4).

The beneficent serenity of the country is masterfully pictured in this section, which is one of the most beautiful portions of the work. From the peaceful, quiescent atmosphere created by the strings, the beauty of which Liszt utilizes with consummate skill in soft, sustained harmonies, emanates the lovely *Pastoral Theme,* herewith quoted, in true romantic spirit by the horn. These harmonies, beginning in E-major, lead via C-sharp minor to A-major, the key of the first portion of this section.

Ex.9 Allegretto pastorale

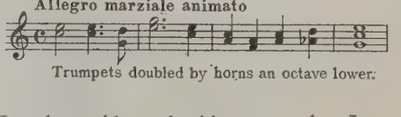


After it has been answered by the oboe the happy, care-free shepherd tune is taken up in this slightly altered form by the clarinet.

Ex.10

A graceful and dainty little scene between strings and wood-wind, into which the first violins soon weave a soft melody, leads to a return of the second love theme (the Love Theme proper), now in A-major, and soulfully sung by the violins (the 61st measure of the *Allegretto Pastorale*). This theme now dominates the rest of the section, in which it is constantly combined with the following version of the Pastoral Theme:

Ex.11 Violas and solo 'cello



In increasing animation and fuller orchestration the Love Theme rises to greater heights of exaltation, to appear, in its presentation in C major (especially in its second appearance in this key, 28 measures before the *Allegro marziale*) in its fully matured estate, like a mighty force to fit Man for the great battle and his highest achievement.

Allegro Marziale Animato

In this, the last prelude in which Man figures, the First Fundamental Theme dons the garb of war, to be proclaimed in martial tempo and rhythm by the brass, accompanied by rushing scale figures in the violins. The battle scene brings forth a new theme:

Ex.12 Allegro marziale animato

In the midst of this even the Love Theme is conscripted, appearing in marchtime (*tempo di marcia*), the brilliancy increased by the advent of the piccolo, tary-drum, bass drum and cymbals, plete the orchestral panoply. This tion reaches its greatest height a *maestoso,* F-sharp major (measure the *Allegro marziale*).

Returning to the main key of the C-major, this section leads into the clusion, in which Death, intoning the unknown Hymn, provides a ma apotheosis to the brilliant compo utilizing the material derived from th transformation of the First Fundar Theme, illustrated in Ex. 2.

"Almost as good as attending the concert itself," writes one ETUDE friend of these very lucid and interesting articles on Great Orchestral Masterpieces, by Mr. Biart. Really, an astonishing amount of excellent home music study may be accomplished by employing these articles, together with the excellent Talking Machine records issued by the leading companies, or by preserving the articles for use when one of these works is announced on your radio program.

Musical Nuggets

By Louis G. Heinze

THE orchestra is the ideal for playing; so rich is it in coloring and etration of all the parts.

* * *

What one cannot do slowly, one do at all. This has been said many times, but cannot be said too

* * *

Real progress is not measured by much" you practice, but "how thor you are in your work.

* * *

Be sure that your piano is always in tune; for nothing is more harm the ear than a piano out of tune.

* * *

It is absurd to say you do not to follow music as a profession and, fore, you need not take the study of seriously. If this is your attitude, study music at all.

* * *

If you are going to play in publ not practice the piece on the day concert. That is too late for practic can only work harm. You may, ho practice exercises, or any piece or not on your program.

* * *

Do not practice when you are phys or mentally tired. Find out why y tired, or why the progress is not w should be, and then remove the caus half-hour of practice when you are condition is worth more than hou practice when conditions are not ri

A Creed for Teachers

By Elizabeth P. Warden

I BELIEVE in giving every bit of hel inspiration that I can in every lesson.

I believe in doing my part conscienti

I believe that the pupil must do hi

I do not believe that a teacher has police duty—invading the home—to s the pupil is practicing.

I do not believe in retaining a pupi "hates music" and says so.

I believe, however, that many pe without outstanding talent, want an music in their lives—for solace and fo expression—and, although they may achieve virtuosity, they should not couraged nor stultified.

I believe that it is cruel to expect pupil to be brilliant and showy.

I believe there is no greater worl fostering the love for good music heart of a child, and that music, used, will help to keep the human rac and moral.

From my youth upwards I been exposed to envy, so it doe surprise me when any attem made to crush my poor talents the Almighty above is my su My wife wrote to me that M depreciates me very much, but will never believe. If true, I fo him.—Haydn.

NESTLE REVOLUTIONIZES THE PERMANENT !

This Machine "Reads" Your Hair and Takes the Guess Out of Permanent Waving

For the first time in history, Practical Science enters the Beauty Parlor. At the Nestle Testing Laboratory, New York, the new Nestle Meter Scale renders you a valuable personal service. Results are then sent you by mail.

ERMANENT WAVING—the way to beauty . for straight-haired women—is now on a ientific basis.

lo longer is your hair subjected to a stand-rdized formula by which you may or may not et the result you desire. The Nestle Labora-ory in New York, working with the Nestle ermanent Waver in your own vicinity, has aken the guess out of permanent waving—y means of

The Nestle Meter Scale

his new invention literally "reads" your hair efore you have it waved. It reveals the hid-en facts which the eye cannot see. It tells us ie exact characteristics of your hair. We sup-ly you with this necessary information by ail—and the Nestle Permanent Waver in our own vicinity is then enabled to give you ie scientific, CIRCULINE PERMANENT WAVE our hair requires.

The Circuline permanent waving process is a variable treatment that follows the readings of the Nestle Meter Scale "to the letter." It is a personalized treatment adapted to your individual head of hair.

No matter whether your hair is strong or weak, snow-white or black, bleached or dyed—no matter whether you want a tight, medium or loose wave—*perfect* permanent waves may now be yours.

Send Us a Strand of Your Hair for the Laboratory Test
It Costs You Nothing

Just fill out the coupon below—and send a small strand of your hair (about the thickness of a pencil lead, and at least 5 inches long). *Do not send combings.* Enclose $1 Deposit to cover costs of testing.

You will then receive from the *Nestle Laboratories,* a card giving the result of the thorough analysis of your hair on the *Nestle Meter Scale.* Your $1 deposit will be deducted from the price of your *next* permanent wave—given anywhere in the United States where the *Nestle Circuline Process* is used. The Nestle Company guarantees the refund of this deposit. Over 6,000 hair dressers and beauty parlors use Nestle Permanent Waving apparatus.

Successful Waves a Certainty

With scientific knowledge of your hair in advance, your Permanent Waver cannot fail to give you the style of wave you want—exactly as you want it.

We suggest that you send your hair sample *at once* to insure receipt of your "reading" without delay. Please write your name and address clearly when filling out the coupon below

NESTLE LANOIL CO., LTD.
Established 1905

Using Pictures of Master Musicians

By Mary Scott Drynan

Little did I think I'd ever get with these men," said a little she cut out pictures designed for se.

nark, which was so ingenuous as e a good laugh, gave me also a this article.

ild is one who helps me with k; and in return I help her with ns.

walls hang some pictures of the and she has been interested in s and stories.

music note book I pasted pic- Beethoven seeing a vision, Bach amily, Little Handel in the attic. she had a reading lesson of the *Sonata* and boasted to the girls owledge of Beethoven. One of ls did not want to be outdone de a scrap book and cut out pic- n the ETUDE; so now there is a the collection of pictures.

with my guidance that the child ig out the pictures when she above remark. She was greatly h the picture of the famous mposer, Chaminade.

; to me this is a way in which an get the children interested in ther than jazz. The story of the gives them an added interest in piece. The names of the musi- n just pronounced correctly, gives them a point of contact with selections over the radio, or gramaphone or with orchestra or band. They begin to listen.

Children of the teen age have the collecting mania for stamps or post cards; why not encourage collections of pictures of famous musicians?

My suggestion is a common scribbler with pretty cover, a picture pasted on each page with plenty of room for added dates or comments or incidents. If the teacher has time she will find it cultural and educative to make books of the kind as rewards.

Why not give this work to waiting pupils or for club work? It will be instructive, keep them quiet and interested and give you an insight into their knowledge by the remarks they make and pictures that attract.

Pictures of the clavichord, harpsichord, wind instruments will prove instructive also. Stories of musicians, stories of operas, stories of the growth of music from the time of Jubal, make the most interesting reading and every intelligent teacher should be conversant with such literature. "No time," some say. "We have all the time there is," to use a trite phrase; we always find time for what we like to do; and this is along the line of our profession. It is an asset in teaching.

Two, Company; Three, a Crowd

By Sarah A. Hanson

TION that comes up frequently be annoying is, "Does the pres- third person at the piano lesson id person during practice hours ake the pupil self-conscious and with the work in progress? It understood that at these times ust give full vent to his feelings out his lessons with undivided The presence of an extra person makes concentration difficult; the player wonders how his music is being received; his train of thought is disturbed; and he is checked in conquering his difficulties. Moreover, he is tempted to play more rapidly than his technic permits. His mistakes confuse him, he plays still more recklessly, and ends by becoming discouraged.

The Two Simple Rhythms

By Hope Stoddard

at of nature occurs in regus of unvarying intensity and egularity. Man supplies the his convenience and pleasure. s of rhythm, the double and ear in their simplest forms in *one* two; *one,* two) and in three- two, three; *one,* two, three) ien these two rhythms are defi- d and responded to, there will ulty in mastering all the others, our, eight-four, six-eight, six- four-two are but variations of measure, and three-eight and of the triple measure.

our time every second beat (the one quarter note in length) is endowed with an accent. This can be caught in the simplest sounds, the tick of a clock, the chug of a train. It is the rhythm of *"hay* foot, *straw* foot" or *"eeny, meeny, miny, mo."* Then, the triple rhythm, a little more rollicking, but less natural and less capable of sustention, has an accent on every third beat (each beat still a quarter note). This must be firmly sensed at the start. A good verse to recite

1-2-3 1-2-3 1- 2-3 1-2-3

is *"Higgity, piggity, my* fat *hen."*

Get the "swing" of both these rhythms and keep it and you will be able to add any number of notes, holds, rests, and runs, and still remain unconfused.

IVERS & POND PIANOS

An Aristocrat of Small Grands

Is our *five foot Colonial Model* shown above. Built today, by the same interests (as in 1880, with the same high ideals of piano perfection), its charming tone quality and chaste beauty of design appeals potently to the cultured musician who knows and demands the finest in pianos.

Ivers & Pond PIANOS

Are used in some 600 Conservatories and Schools and 75,000 Homes. All are of *but one quality—the finest.* Every intending buyer should have our Catalogue describing this, and other Grands, Uprights and Players.

Our Unique Selling Plan

Where no dealer sells the Ivers & Pond, we can supply you from our factory as safely and as satisfactorily as if you lived near by. We make expert selection and guarantee the piano to please, or it returns at our expense for freight. Liberal allowance for old pianos in exchange. Attractive easy payment plans. For catalogue, prices and full information, *write us today.*

The Singer's Etude

Edited by well-known Specialists

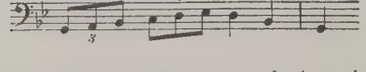
It is the Ambition of THE ETUDE to Make This Voice Department "A Vocalist's Magazine Complete in Itself"

An Interpretative Lesson on Schubert's "The Erlking"

By Gertrude Hartman

IN 1814 the Schuberts were living at Lichtenthal, near Vienna. On a wintry afternoon the young Franz's friend, Spaum, called and found the eighteen-year-old-composer in a state of excitement over Goethe's poem, "The Erlking," of which he was madly endeavoring to put on paper notes of his musical setting that was now completed excepting the accompaniment. How was it possible for him to do this? Following his father's desire he was preparing for the profession of a schoolmaster and had no special education in music. Having a good voice he was a member of the church choir, where he sang the masses of great composers. He had also taken lessons on the piano. These were his only musical education. Not only did this work demonstrate his great talent; it also introduced a new era in song composition which was destined to call forth and develop musical art.

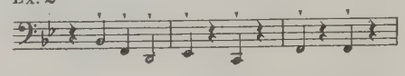
In order to appreciate fully the importance of this work it is necessary to turn to the songs which were popular in those days. In general they make no deep impression. They merely breathe a charm, tenderness and mildness. Their melodies and composition are simple and full of teasing humor or heartbreaking sentimentality. There is no room for real events. Every stanza repeats the air regardless of whether or not it accentuates the meaning, and the piano gives only a few chords to emphasize the melody. Beethoven, Mozart and other composers, who had tried already to compose ingeniously, were not recognized by the musical circles. Shubert's "Erlking" was the first song to stir popular interest and enthusiasm.



What is the new, the revolutionary element in this song? For the first time the mood of the poem has been taken fully into consideration, brought into music and carried through the whole work. For the first time the piano gives the foundation for the evolution of the mood of the song. In order to prove this let us consider first the contents of the poem itself. Goethe's ballad, "The Erlking," is a masterpiece of its kind. A whole tragedy is brought into eight short stanzas. There is no description in it; everything is in a dramatic style; father, child and Erlking are the characters.

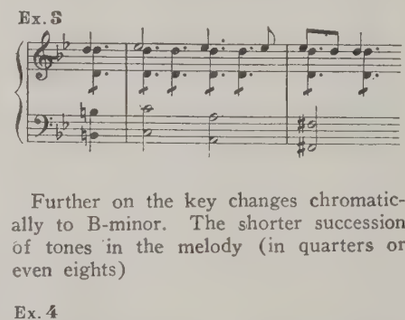
Atmospheric Effects

A DARK and dreary day of November is merging into twilight. A road winds through fields and meadows fringed by deep forests. Nearby, a brook murmurs its monotonous melodies. The calmness is suddenly shattered by the clatter of hoofs. A rider and child, wrapped in a wide cloak for protection from the cold, hurry homeward. In his phantasy the boy sees his surroundings filled with ghostly spirits. The white fog on the meadows seems to be the wraith-like Erlking. In the rustling of the dry leaves he hears a phantom voice. The curious shapes of the willows become the daughter of the Erlking performing her nightly dance. The father tries to soothe his child's excitement; the son cries in fright as he feels the icy grasp of the Erlking. His father doubles his efforts to reach home, arrives exhausted, but, alas, his child is dead!



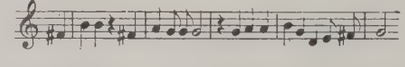
The music is based on the anxiety and dread embodied in the action, which are expressed by the strong rhythm of triplets uninterruptedly carried on through the whole piece, its regularity changing only in the last three measures. The left hand with its rapid scale-passages like the following:

Ex. 1



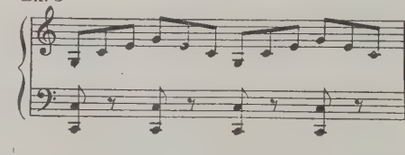
suggests the weird surges of the wind through the galloping triplets of the right hand. The voice of the father is deep while the phrases of the child are in a much higher register. The accompaniment uses, to a large degree, the diminished-seventh chord. The interlude after the father's words, "it is some misty cloud," consists of single tones in the left hand.

Ex. 2



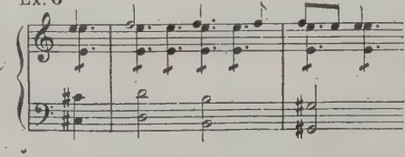
accompanied by triplet-chords in the right, and prepares us for the appearance of a new character, the Erlking. His speech is set in the relative major-key; it's accompanying triplets now divided between the hands, which produces a ghostly effect. This part is executed *pp* and very smoothly. A sudden *f* indicates the anxious cry of the child, which begins in the same measure in which the Erlking finishes. The phrase is again based on a diminished-seventh chord, with an added minor-thirteenth, this time a sharper dissonant through the "d" in the right hand.

Ex. 3



Further on the key changes chromatically to B-minor. The shorter succession of tones in the melody (in quarters or even eights)

Ex. 4

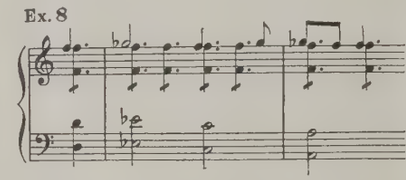


and the constant changing of the mode of accompaniment reveals the father's alarm. In C-major the Erlking is again wooing the boy, this time more softly, which is expressed by broken chords played *ppp*.

Ex. 5

The same phrase as in Ex. 3 intimates the fear of the child but is one scale-degree higher to show that his anxiety is growing.

Ex. 6



The father apparently has attained his former calmness which is expressed musically by a more sustained bass with a simple accompaniment. It seems that the last energetic words of the father, spoken in a louder tone, have really pacified the wildly-knocking heart of the child. During four measures we hear only the shrieking wind and galloping horse. Again the Erlking speaks; though this part also is to be played *pp* even considering the full chord accompaniment.

Ex. 7

Soon the diminished-seventh chords, together with a fast increase of power up to *fff*, rise to a dramatic grandeur. The boy's excitement has reached its highest point, and his strident phrase illustrating his fearfulness is repeated another scale-degree higher.

Ex. 8

This is the climax of the work.

The father cannot answer. His only thought is to leave this terrible spot and to bring his child under his home roof. For this reason he gives spurs to his horse. The accompaniment, in the same style as in the beginning of the work, becomes more and more agitated, chromatically modulating to A-flat major when the father arrives at his farm, and then suddenly stopping. In the style of a recitative, the final phrase is interpreted by the singer alone, interrupted only by a diminished-seventh chord which is lengthened by a pause indicating the approaching tragic end. With the shortest possible cadence (the dominant-seventh chord followed by tonic triad) the song finishes. It is this abruptness which is so extremely impressive.

After this rather speculative analysis let us consider the composition as a whole and enjoy its beauty. We shall find that the music considerably increases the force of the poet's words. We are momentarily calmed by the voice of the father; we sympathize with the anxious child; we are caught by the alluring words of the Erlking. Breathlessly we follow the events. The fear of the child becomes our own. We imagine the hopelessness of the father, and are deeply struck at the conclusion of the tragedy.

Two of the greatest masters—Goethe and Schubert—call forth these feelings. It is done spontaneously; and for just this reason we are deeply impressed.

How to Choose a Sin Teacher

By Beatrice Wainwright

HAVING arrived definitely at the sion that one is to become a stude art of singing, the all-important arises as to who will give the best tion possible. This decision is a v ter, as future success or failure m from the choice.

A teacher should not be chos for his or her charming personali is, of course, an asset to a teache one, but it does not insure good tion. Some very charming and people are poor teachers, due eith of knowledge or the power to imp they know. An important step when seeking a singing teacher, out as far as possible the reputati person in the musical profession, other students of singing who sufficient instruction and experien sound advice.

It is decidedly an advantage an able to study with one who is a enced singer, as it is of great va able to listen to good tone illustr the interpretation of a song a The demonstration will often he dent to arrive more readily at which he is striving.

Seeing a fine painting is a grea tion to art students and enables grasp the various technical poin structor has been explaining. thing applies to singing, and does mere imitation or lack of intellig standing, but acts as an inspiratio demonstration, and gives a muc conception of the idea being pr

ticulation in Song

By Watson Lyle

ER who fails to pronounce clearly gently the words of the songs eglects the very essence of his od song makes its appeal to the the attraction of its music and t that the setting enriches the endering still more intimate the rose of which use has been made. is way that the tonal art, so to ines the punctuation and rhythm , and accentuates the sound of by the phrasing, the rhythm, lody of the music. Plainly, the cannot, or does not, enunciate he words of a well-conceived far better limit himself to the calise, or composition for voices e sense of the literary text is of importance.

iculation should be amongst the of every singer, and although it more often than it was a few is still rather the exception than Perhaps this is due to a preva- hat it depends upon conscious e in the enunciation of certain nds and certain words when sung. The singer who has e habit of good articulation speech, allowing the lower jaw to move with a natural looseness, and mentally hearing all words and sentences as they should sound in good, plain speech, before giving utterance to them, will in time find that clear articulation in song becomes effortless. Tendencies towards mispronunciations and provincialisms must be set right. The words of songs in dialect, like those in a foreign language with which the singer is imperfectly acquainted, naturally demand individual study before the attempt is made to sing them.

When the correction of habitual defects in pronunciation is necessary, it will be found helpful to read aloud good poetry or prose for ten minutes or so every day. This reading should be done in a steady and moderately loud voice with as much care in breath control as in singing (good breath-control should also be a matter of habit) and not too rapidly, so that there is correct articulation of each word, even when it has but one syllable. Indeed, it is in the small words that the tendency to slur and mispronounce is most general both in speech and song. Avoid exaggerations in accent such as the "er" and "aw" affixes, and the careless ending of "ing" minus the "g." These and other similar slovenly habits of enunciation are far more likely to be detected by the student or by a candid friend or relation during reading aloud practice than during the actual singing of a song.

The Singer's Opportunity

"THE great opportunity of the American singer is at hand. Opera in English is coming, and coming fast. In this, because it is their native tongue, the American singers should have every advantage over the foreigner. Their obligation lies in preparing themselves to sing their English as beautifully as the foreigner sings his language. It has been done, and it can be done again, by just as many as are willing to pay the price. Remember Nordica's, "I have heard many American girls with voices better than mine; *but I have worked.*"

Frantz Proschowsky
SEVENTY-FOUR RIVERSIDE DRIVE

WURLITZER
REG U.S.PAT OFF.
Studio Player

A wonderfully compact little instrument that fits in anywhere

In small apartments, in studios, small homes, etc. this Studio Piano is filling a long felt want.

THE more you know about music, the more you'll marvel at the rich musical qualities of this dainty Wurlitzer Studio Player.

Full Volume

It hardly seems that so small an instrument *could* furnish that same full-rounded volume—that same delicate clarity of tone which has made the larger Wurlitzer pianos such favorites among generations of music lovers. But when you hear it you'll agree this is true.

Only 4 feet 1 inch high and only a trifle wider than its standard keyboard. No room is too small to accommodate it easily. Yet, listen to its clear, full-toned, artistic reproductions of any standard music roll. With your eyes shut you'd be sure you were hearing a full-sized player in action.

The Price is Low

The price on this marvelous little player piano is only $445.00. Wurlitzer Studio Pianos, without player action, range upward from $295.00. Prices f.o.b. Factory. Convenient terms can be arranged easily with the Wurlitzer dealer.

Sold by Wurlitzer dealers everywhere

Suffice it to say, that skillfully-designed exercises are ccomplish the object in question s the pupil remains set in those abits of speech which are only lent among our population. A o pronounces *picture* and *pitcher* ke, or who makes no distinction *onsul,* *counsel* and *council,* or ds *"somep'n"* as a fair equiva- *omething,* in habitual every-day s a long, long road to travel be- ning good diction in the art of

t thing to do, then, if you would distinctly in song, is to mend y-day speech. Avoid colloquial ns, and pronounce every word nd distinctly. When this is once will not be strange if you should the realization that there are ds of which you are not entirely long as you were satisfied to hem, you got by without trouble, empt at a really clear and ade- iculation leaves you in doubt. where the dictionary will help, ful study of the marks of pro- Ellis' book, *Speech in Song,* nany valuable hints worth study lentally, takes up not only Eng- also several of the more impor- gn languages.

y and Difficult Consonants

ng a serious study of the art of enunciation in song, it is of great help to know just where the greatest difficulties lie, and what is their real nature, in order to concentrate attention where the greatest need is. Any good teacher will train you on the vowel-sounds; hence we shall speak here only of consonants.

Among the easier consonants are m, n, ng (as in wing), l, and r, because they can be actually sung with a musical tone, and even *prolonged* (though no good singer would think of prolonging them, in actual use). Next to these may be named d, b, and g (as in game); these represent a quick transient vocal explosion, yet the tone of the voice actually enters into them, so that a good singer may easily make them resonant. The most difficult are t, p, and k (or c as in can), because there is really no tone in these; they merely indicate a certain form of attack in approaching the following vowel: "t" attacking it by means of the teeth and tip of the tongue; "p" with the lips, and "k" with the palate. The best one can do with these three sounds is to make the proper action of those vocal organs mentioned as quick and decisive as possible, avoiding sluggishness or incompleteness of adjustment.

It remains to speak of the several "hissing" letters. Of these, z (or s when it has the sound of z, as is wisdom), is not unduly difficult; neither is z (in azure), which is the same sound as the s in pleasure. But the *sharp* sound of s, as in sing, is one of the most difficult of all, especially at the end of a word. It is not a beautiful sound at best, yet it *must be pronounced, not slighted,* or the words will be mangled. It is a sound that does not carry well, and the singer may often feel that it is even too prominent, when in fact it may not be audible to the hearers at all. There is not the slightest possibility of its being *too* distinct, only it must not be prolonged at all. As an example of its weakness in carrying-power—no echo ever repeats the "s" in a word, and it seldom registers properly on phonograph records.

The sound of th (as in thin) is another difficult sound to make carry over the footlights and should be regarded as much in the same category as sharp s; but the sound of th (as in then) offers no special difficulty to good speakers of English. As will be observed, it is necessary to distinguish carefully between the *name* and the *sound* of a letter, especially in our own language, which has an unfortunately erratic mode of spelling many words.

Chalking Up a Masterpiece

a composer of genius was never y poverty to the extent of poor who frequently lacked such essities as ink and paper. Briefly s in his biography of Schubert, oune Duncan remarks:

ert was put to many shifts for ng-materials. At the Convict, l others found him music paper; ng we have seen him composing of fare (this refers to the well- rigin of *Hark! Hark! The* our story now discovers him writ- in chalk. His brother Ferdinand was appointed (in 1820) to the office of *Regius Chori* in the church of Altlerchenfelder, where music had fallen into sad disorder. Some new pieces were wanted for performance on the coming Easter Day—already close at hand. In this dilemma, be applied to his brother Franz—good at need—who forthwith composed the *Antiphons* (Op. 113), and finding his stock of MS. music-paper exhausted, the compositions, which are for four voices, were set down in black chalk, on coarse, grey wrapping-paper."

c, by what we are doing to-night, in English can be accomplished, it is beautifully effective. I mestly that American voices are n the world to-day; but just so opera in this country continues n in other languages, just so long rican singers wait for a chance to be heard. They may be able, and often are, to sing French or Italian better than native French and Italian singers; but always, when opera is given in French or Italian, the French singer and the Italian singer will get the job."—OSCAR SAENGER, AT OPERA-IN-ENGLISH REHEARSAL.

The Home Beautiful Contains a Grand

No richer gift than this

GLORIOUS music on the bridal day . . . pleasure and happiness for a lifetime. All this you give—and more—when the gift's a Brambach Baby Grand.

The Brambach was the pioneer in the Small Baby Grands. Today it is acclaimed by music lovers the world over.

Compact, beautifully-proportioned, this instrument is an achievement in piano making which only Brambach's 103 years of experience could produce. It is less than five feet in length, yet has all the responsiveness and tonal excellence of far more expensive instruments.

Thousands of American homes now enjoy this beautiful Baby Grand. And its popularity is easily understood when you consider its beauty, quality and dependability.

Easy to own one

Because of the enormous Brambach production, this remarkable grand piano is priced surprisingly low, $650.00 and up, f. o. b. New York City. On convenient terms, if desired. Distributed by leading music houses everywhere.

Mail coupon below for further information and for a paper pattern showing how little floor-space is required by this beautiful Baby Grand. The pattern will be mailed with our compliments.

Address _____

A Summer Session

Beginning June 21st

Length of course arranged to suit individual convenience

Study

~at an amazingly low cost, averaging $150 or less for a full course of study under master teachers

Master Classes

Master Classes in Piano, Voice and Violin, conducted by renowned artist teachers, at so low a cost as to be within reach of all.

Classes in Teaching Repertoire, Music Pedagogy (Normal), Public School Music, Harmony, Counterpoint, Composition, History and Appreciation of Music; Accompanying, Ensemble Playing, Sight Singing, Orchestra Conducting, Choral Conducting, Dramatic Art, Dancing and Languages; a special course in Community Music, and another in Motion Picture Organ.

Teachers' Certificates may be earned by completion of prescribed Courses.

Private instruction available from the entire Faculty of more than one hundred instructors, in any subject desired.

Dormitory accommodations provided at moderate rates.

Vacation

All the good times of a real vacation along with the advantages of summer study

Eight Vacation Excursions

All the good times of a real vacation can be enjoyed in a series of eight vacation excursions, conducted by the School. The schedule includes: 1. An automobile trip through the Chicago Parks, concluding with a visit to the studios of the famous sculptor, Lorado Taft. 2. A visit to the Art Institute. 3. Capitol Theater Party. 4. A visit to the Field Museum. 5. A boat ride on Lake Michigan. 6. A visit to Newberry Library and the Chicago Historical Society. 7. A visit to the Chicago Tribune, to see the printing plant, the great Radio Station WGN, and the Observatory Tower. 8. A journey in chartered car to Ravinia Park. Picnic supper in the Park. *Opera in the evening with Metropolitan and Chicago Opera Company artists.*

Free recitals will be given every week by artist teachers of the School.

Opportunity

~for professional advancement

Teaching Positions

The Sherwood Music School now has Thirty Neighborhood Branches in Chicago. These Branches give rise to positions for advanced students and teachers who wish to teach and at the same time continue their study under our artist teachers. There are also excellent positions available for our students, when qualified, in the thousand and more Branches of the School, located throughout the country. *Additional teachers for the 1926-27 teaching season in the Chicago Neighborhood Branches will be engaged from those in attendance at the Summer Session. The number of openings is so large that any talented, ambitious student or teacher, with reasonable preparation, may be sure of an opportunity in our organization.*

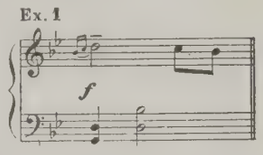
Trépak, a Russian lance. (ii) As a solo piece, more n time is permissible. Schubert's *Musical,* Op. 94, No. 3, is analogous ish Patrol, ending through a gradual *lo* to a perfect *pianissimo* as a re-ıld do.

Piano Lessons by Correspondence.



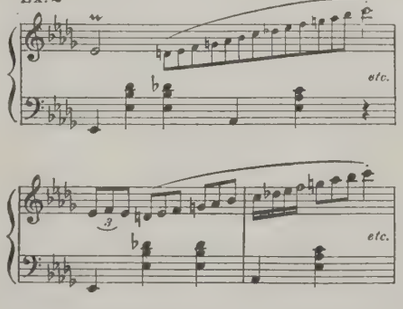
Q. Kindly give me the name of some reputable piano teacher, from whom I might have some lessons by correspondence.—Shelbyville, Tenn.

A. It is against the policy of this department to recommend any particular teacher. Still more, piano teaching "by correspondence" is a doubtful proposition, impossible of recommendation. A "reputable teacher" could give you excellent lessons by correspondence in the theory of music and in the science of harmony and counterpoint, but not in playing.

When Grace-Notes Should Be Played.

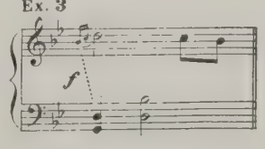
Q. Please enlighten as to the correct execution of following:

Ex. 1



Musical dictionaries seem so vague on the subject of playing grace-notes. In these examples are the grace-notes played with the bass notes or do they precede them? I have been told, when playing Chopin's Waltzes, to play slides of two or three notes before the principal note when they occur at the commencement of a measure.—EUNICE, Ville Lasalle, Pro. Que., Canada.

A. The strict rule for playing appoggiature, acciaccature, trills, slides, mordents and other grace-notes and ornaments, is to play them *with the beat* of their principal note. This rule must be observed in all classical compositions. In some modern music, however, greater latitude allows the performer to play them more at his pleasure (*a piacere, ad lib.*) A particular exception must be made for the works of Chopin, for he indulged in long passages of ornaments, exquisite lacework, demanding special treatment in order to embellish with delicacy the chief notes of the subject. A well-known example is the long, portamento-like slide in the *Valse brillante,* Op. 34. No. 1:



Op. 34, No. 1

Ex. 2

Your second example is not legible; but here is the first:

Ex. 3

Lyre and Lute.

Q. What is the difference, if any, between a lyre and a lute? Were they not made by the same instrument makers?—J. O'S., Brookline, Mass.

A. It is said that, over three thousand years ago, Mercury, on the seabeach, happened to kick against the shell of a dried-up tortoise, the dried sinews of which with the shell for a sounding-board, emitted a musical sound. Putting the fable aside, we know that the lyre is one of the most ancient of stringed instruments of the harp family. As such, of course, it has no finger-board; whereas the lute had a finger-board. The latter belonged to the guitar or mandoline family. The maker of both instruments was termed a "luthier," a name still in use in France.

Perspiring hands have ruined many a performance!

Odorono harmlessly corrects this unnatural condition. Send for sample

The greatest annoyance a musician has to cope with, is wet, clammy hands. Many a brilliant performance has almost met disaster because the player's hands were wet and slippery with perspiration—and so, uncertain, undependable.

This distressing condition is caused, to a great extent, by nervousness. Excitement of any kind, as well as heat, stimulates the perspiration glands to unusual activity.

Physicians advise controlling this annoying and irritating perspiration in limited areas such as palms, underarms, feet. You can correct it quickly and easily with Odorono. One quick application several hours before playing will keep your hands dry, comfortable and flexible.

Odorono you know, is the *original* perspiration corrective—formulated by a physician for both the moisture and odor of perspiration. It is a clear, clean antiseptic liquid now widely used in hospitals by physicians and nurses.

The perfect Underarm Toilette

Men and women everywhere now depend upon Odorono for complete protection against underarm odor as well as moisture. This is a danger to which everyone is subject in spite of scrupulous soap and water cleanliness.

Twice a week is all you need to use it! One application will safeguard you for three days, from that ruinous moisture which stains clothing, and that repellent odor which destroys your daintiness.

Just a short, little part of the toilette—yet how much it saves; how much it gives in comfort and attractiveness! 35c, 60c and $1 at any toilet counter or sent by mail.

Send for trial bottle —only five cents

THE ODORONO COMPANY
425 Blair Avenue,
Cincinnati, Ohio

Please send me sample bottle of Odorono, with your booklet, for which I enclose 5c.

The Organist's Etude

Edited by Well-Known Specialists

It is the Ambition of THE ETUDE to make this Organ Department "An Organist's Magazine Complete in Itself"

English Anthems and Their Composers

Including Many Works by Leading American Composers for the Church

By George Alston Brown

THE history of the English anthem extends backward three hundred years, in an unbroken line of endeavor to give to the church a musical service in keeping with her liturgy and embellishing it. Song has ever been the handmaiden of religion. The immediate predecessor of the anthem was the motet of the Catholic Church. This was a contrapuntal composition, built upon the church or Gregorian modes, with voice parts moving independently. In this style of composition, sometimes in sixteen or more parts, rhythm was disregarded or at least subordinated and the movement of the parts in easy flowing melodic form was the chief aim.

Much was accomplished along this line of musical writing. For nearly five hundred years the musicians of the Christian church had been experimenting with the possibilities of the Greek modes and gradually developing a polyphonic style, until one great man stands out, overshadowing all his predecessors, Giovanni Pierluiga, called Palestrina from his birth place. His life was spent as director of music at Rome, in the service of popes; and the catalog of his works includes ninety-five masses. In melodic grace he excelled his Netherland masters. The Palestrina model remained the standard throughout the sixteenth and part of the seventeenth centuries. Then the germs of modern forms began to assert themselves, and the improvement in organs invited greater instrumental support for the voices. The newly discovered laws of chord formations, melody, rhythm and tone color, opened up an unlimited field which composers quickly made use of. Another factor of importance, which had much to do with the changing trend of church music, was the religious unrest which marked the close of the middle ages.

The Reformation Period

In Germany at the time of the Reformation, Luther desired the laity to take part in the church services; and, by the modification of folk songs, adapting them to sacred words, the chorale for congregational use was evolved and developed. This was followed in the seventeenth century by the church cantata which was brought to perfection by that master musician, Johann Sebastian Bach. He ignored the operatic style of the Italian church music and by his genius dominated the ecclesiastical music of his time. In England the Reformation split the church into two hostile groups, the Anglicans and the Puritans. This had a decided effect upon the church music, causing two distinct lines of development—the ritual music of the established church and the psalm tunes of the Puritans.

With these forms we have naught to do in this survey. But growing up side by side with the liturgical service, was the anthem, the successor of the Latin motet, and in England the anthem took a special and significant form. The words of the anthem are not prescribed by the church, but they are usually taken from the Scriptures or from the book of Common Prayer. The hymnal has also furnished inspiration for many beautiful hymn anthems.

Henry Purcell and His Successors

The modern English anthem form dates from the time of Henry Purcell (1658-1695); and Gibbons stands as virtually the father of pure Anglican music untouched by Roman influences. With the advent of Tye, Whyte, Tallis and Farrant, we reach the time when the formality of harmonic rules stressed tonality which in earlier compositions was rather vague. Tallis was the most famous of his age and did much to give definite form to English cathedral music. His responses, preces and litany, were composed during Edward VI reign and are used to-day in the English and American churches.

Of Farrant, it is interesting to remark that the anthem, *Lord for Thy Tender Mercy's Sake,* so long attributed to him, is now thought, by scholars, to be the work of Tye.

Form of the Anthem

The form of the anthem is not restricted. There is unlimited scope for musical invention; and, as the English anthem has never been affected by the secular style nor brought under the influence of the opera as was the case with Italian music, it has maintained a diginity and appropriateness in style which is much to its credit. American composers have followed the British style, giving to the church many notable anthems.

Mr. Edward Dickinson, in his *History of Music in the Western Church* has this to say: "One who reads through large numbers of English church compositions cannot fail to be impressed by their marked similarity in style and the rarity of features that indicate any striking individuality. This monotony and predominance of conventional commonplace must be largely attributed, of course, to the absence of real creative force in English music; but it is also true that even if such creative genius existed, it would hardly feel free to take liberties with those strict canons of taste which have become imbedded in the unwritten laws of Anglican musical procedure. In spite of these limitations, English church music does not deserve the obloquy that has been cast upon it by certain impatient critics.

"That it has not rivalled the Catholic mass nor adopted the methods that have transformed secular music in the modern era is not altogether to its discredit. Leaving out the wonderful productions of Sebastain Bach (which, by the way, are no longer heard in church service in Germany), the music of the Church of England is amply worthy of comparison with that of the German Evangelical Church; and in abundance, musical value, and conformity to the ideals which have always governed public worship in its noblest estate, it is entitled to be ranked as one of the great four historic schools of Christian worship music."

In selecting the following chronological list of athems, the task has been a perplexing one. To include all anthems of merit would mean not a magazine article but a book. It has therefore been necessary to omit many excellent anthems. The inclusion or exclusion, as we approach the modern school and the work of living composers, was yet more exacting. The list must be taken as more or less arbitrary.

For the sake of space and because of the fact that this article deals exclusively with anthems, Latin compositions are not listed; although many are available for use in Protestant Churches, with English texts, either as translations or adaptations. The church canticles and communion services are likewise not included.

Chronological List of Anthems

Tye, Rev. Christopher, 1508-1572. Rector of little Wilbraham, Newton and Doddington-cum-March. First composer of Passion music according to St. John's Gospel.
- Father of all.
- Ho! ye that thirst.
- How still and peaceful.
- In life's gay morn.
- O God of Bethel.

Tallis, Thomas, 1520-1585. Organist, Waltham Abbey.
- All people that on earth do dwell.
- Hear the voice and prayer.
- O Lord, give Thy Holy Spirit into our hearts.

Farrant, Richard, 1530-1580. Master of choristers, St. George's Chapel.
- Call to remembrance.
- Hide not Thou Thy face.
- Lord for Thy tender mercies.

Byrd (Byrde or Bird), William, 1538-1623. Senior chorister of St. Paul's Cath. Pupil of Tallis.
- Bow Thine ear.
- I will not leave you comfortless.
- Sing joyfully.
- I will lay me down to rest.
- Come, come, help O God.

Morley, Thomas, 1560-1604. Pupil of Byrd, organist, St. Paul's.
- Father, I am Thine only Son.

Dowland, John, 1562-1626. Lutenist to King Charles IV of Denmark. Shakespeare sings his praises in the Passionate Pilgrim.
- Come Holy Ghost.

Gibbons, Orlando, 1583-1625. Organist, Westminster Abbey.
- Almighty and everlasting God.
- Eyes of all wait upon Thee, O Lord.
- Lift up your heads.
- Why art thou so heavy, O my soul.

Blow, John, 1648-1708. Organist, St. Peter's, Westminster.
- I was in the spirit.
- Look upon mine adversity.
- Save Lord and hear us.

Purcell, Henry, 1658-1695. Organist, Westminster Abbey.
- Let my prayer come up.
- My beloved spake.
- O all ye people, clap your hands.
- Praise the Lord, O my soul.

Croft, William, 1678-1727. Succeeded Blow at St. Peter's.
- Put me not to rebuke.
- Sing praises to the Lord.

Greene, Maurice, 1695-1755. Organist, St. Paul's. Professor of Music, Cambridge University.
- God is our hope and strength.
- I will sing of Thy power, O God.
- O clap your hands together.
- Thou visitest the earth.

Kent, James, 1700-1776. Orga
ity College, Cambridge and
Cathedral.
- Blessed be Thou, Lord
  Israel.
- Hear my prayer.

Boyce, William, 1710-1779.
St. Peter's, Vere Street; St.
Cornhill and All Hallows', Tha
- By the waters of Babylon
- Great and marvelous.
- Lord what is man.

Atwood, Thomas, 1765-1838.
St. Paul's Cathedral.
- Bow down Thine ear.
- Come Holy Ghost.
- My soul truly waiteth
  God.

Callcott, John Wall, 1766-1
ganist to the Female Orphan A
St. Paul's, Convent Garden.
- Praise the Lord, O my so
- Thou shalt show me the p

Wesley, Samuel, 1766-1837.
brother of Charles Wesley.
Bach's music to England.
- Sing aloud with gladness.
- Thou art a priest forever

Horsley, William, 1774-1858.
Ely Chapel, Holborn and Belgra
- Awake thou that sleepest.
- Hear me when I call.

Crotch, William, 1775-1847.
Christ Church Cathedral, St. J
lege and Professor of Music, Ox
versity.
- Methinks I hear the fu
  choir.

Novello, Vincent, 1781-1861.
Portuguese Chapel and Duke Str
fields. Founder of the firm of
- Call to remembrance.
- I will sing of mercy and
- Pray for the peace of Je

Goss, Sir John, 1800-1880. Or
Lukes, Chelsea and St. Paul's
- Hear O Lord.
- O Savior of the world.

Day is sinking to a rest.
Recessional.
Shadows of the evening hour.
Praise be Thine.
Come, O thou traveller unknown.
Thou wilt keep him in perfect peace.

The Dragging of Hymns

To THE ETUDE:

In reading your ETUDE of November I find the question and your answer with reference to the congregation dragging in singing hymns. My experience in overcoming this is to play the air in octaves, using a good heavy organ. In using a two-manual organ I often play the accompaniment on the swell organ and the air on the great, either with a loud single note or in octaves. By using this method I am sure no congregation will drag the hymns.

B. G. WEBSTER.

WEAVER
GRAND PIANOS

BECAUSE of its beautiful and enduring tonal qualities, a host of cultured people—gifted musicians, talented singers, skilled teachers, earnest students, and discriminating music lovers—acclaim the Weaver Grand Piano as one of the really artistic instruments of America.

WEAVER PIANO CO.
York, Pa.

AUSTIN ORGANS

THE standing of Austin in the one great city of Philadelphia, is indicated by Austin organs in St. Mark's, St. Luke and Epiphany, St. Clement's, Church of the Saviour, Arch Street Presbyterian, Cathedral SS. Peter and Paul, Girard College, Temple New Jerusalem.
All are very large, comprehensive instruments; models of modern construction and beautiful churchly tone.

Look Inside the Piano for this Trade-Mark — WESSELL, NICKEL & GROSS NEW YORK TRADE MARK — The Sign of the World's Standard Piano Action

A Valuable Aid To Piano Study

LEARNING to play the piano is first of all a matter of acquiring correct touch. You hasten your child's progress when you start his music practice on a piano equipped with the Wessell, Nickel & Gross piano action. For the piano action is a controlling factor in both *touch* and *tone*. The perfect balance and delicate responsiveness of the Wessell, Nickel & Gross action are of inestimable aid to little fingers in establishing correct habits of touch and of tone production.

Moreover, your insistence on a Wessell, Nickel & Gross equipped piano assures you a *quality* instrument. This famous product—the *world's highest-priced piano action*—is found only in pianos and players of established excellence. It is built by the oldest, largest and leading makers of high-grade piano actions.

WESSELL, NICKEL & GROSS
Established 1874 New York City

When you Buy an Upright, Grand, Player or Reproducing Piano—Insist on the Wessell, Nickel & Gross Piano Action.

In entirely separate s the soloist is more likely to ob- estions.

uld like you to give me some in- n hymn singing. I am directing Methodist Church, and of course n the Methodist Hymnal. I have d that the hymns as found in our exactly true to the original, for O for a Thousand Tongues to tten in the very same key and in- the verses just as Wesley and the ote it originally. Is this true? tter to sing all the verses and to w notes played between certain ely the "breath catchers?" I en told that the hymns used in in England have several verses, dozen or more, and never omit at the hymns as found in our not complete—that originally cluded many more verses. My in- to think that since our book does all the original verses it is per-

fectly correct to sing, say, three verses where there are sometimes six and eight included, and that it would be very poor judgment to insist on all verses being sung. However, if I am informed through your answer that each song found in the hymnal does include all verses as was originally published, is it not better to insist that all verses be sung?

A. With translations, revisions, and so forth it is difficult to know whether hymns as they now appear are in complete, shortened or enlarged editions. In the preface to "The English Hymnal" we read "Hymns are printed wherever possible, as their authors wrote them." To many it will be a surprise to find the ascription of a hymn to this or that author, when it was given at all in hymnals of the last century, was very often misleading. The public now has the opportunity of comparing many originals with their altered versions; and few, we venture to predict, will deny that they had been altered for the worse.

Occasionally, indeed, the music requires the removal of an extra word if a hymn is to used at all; but although these hymns are marked as altered, none of their characteristic epithets have been changed. Sometimes alterations are justified for other reasons; and some translations are the work of several hands. But apart from such exceptional cases, the efforts so often made in the past to improve the work of competent authors have had the inevitable result. The freshness and strength of the originals have been replaced by stock phrases and commonplace sentiments; and injury has been done to the quality of our public worship, as well as to the memory of great hymn-writers." This preface is dated Ascension Day, 1906.

In the "Preface to the Methodist Hymnal," (copyright, 1905), we read "Such verbal changes as have been made in the hymns are in most cases a return to the original and preferable forms. Some stanzas have been wholly excluded on the ground that they contain imagery offensive to modern taste and others have been omitted to secure desirable brevity."

A comparison of some hymns selected from the first hundred appearing in the Methodist Hymnal with the same hymns appearing in the English Hymnal may be interesting. Taking Hymn No. 1 (Methodist Hymnal) "O for a Thousand Tongues" (the one you specifically mention); in each Hymnal this hymn contains six stanzas, but in different order, the second verse in the Methodist Hymnal being the sixth verse in the English Hymnal. In "Story of the Hymns and Tunes" by Brown and Butterworth we read. "The third stanza (printed as second in some hymnals) has made language for pardoned souls for, at least, four generations:

"Jesus, the name that calms our fears."

Assuming this information to be authentic, the stanza mentioned should appear as the third. It thus appears in the Methodist Hymnal, but as the second stanza in the English Hymnal. In both Hymnals the word "calms" is given as "charms." The latter word "charms" may indicate an early English usage, but the editor does not feel that it is as effective and appropriate as the word "calms," which seems to be a more fitting associate for the word "fears."

	Methodist Hymnal	*English Hymnal*
Hymn No. 4	6 stanzas	8 stanzas
28	6 "	8 "
37	4 "	5 "
38	Same number of stanzas in each hymnal, but different version.	
42	5 stanzas	7 stanzas
44	5 "	10 " and Doxology
49	4 "	6 " and Doxology
54	6 "	7 "
60	4 "	5 "
87	6 "	5 "
98	4 "	8 "

With one exception (Methodist Hymnal No. 87) the above list would indicate omission of stanzas in the Methodist Hymnal. Generally, we should think it advisable to sing all the verses: at least, stanzas should not be omitted for the sake of brevity where such omission might impair the effectiveness of the hymn. The omitting of any stanzas should be resorted to only after very careful consideration. We should suggest, however, that it is hardly in the province of the choir director to *demand* the singing of all the verses, as ordinarily the minister feels it a matter for decision on his part.

By "few notes" and "breath catchers" we presume you mean interludes between the verses. The interludes are not now generally used in the larger churches, and if they are used they should not consist of a "few notes," but should be of the length of at least one phrase of the same meter as the hymn.

"The standard of Church music is still artistically lower than the standard now expected in other branches of art consecrated to the service of God. We must all try to raise that standard. In music, as in all branches of art, what is simple in manner and material, if animated by the right spirit, sustained by high ideals and treated with reverence, is capable of expressing the highest truth and beauty."—ARCHBISHOP OF YORK.

PROFESSIONAL APPROVAL

The
Premier Aristocrat Small Grand Model
5 feet, 3 inches long. Price, $725. f. o. b. New York

MUSICAL circles everywhere have enthusiastically acclaimed this artistic Baby Grand Piano. Our files contain scores of endorsements from students, teachers, studios, conservatories and colleges.

The Premier Aristocrat Model, because of its remarkable quality-with-price combination, is generally regarded as America's Dominant Popular Priced Small Grand.

tter sayings to go with the letters
that I have used.
BERTHA CADOGAN.

Class Organization

TO THE ETUDE:

Recitals seem to be a part of the teacher's and student's life, in music. Yet they are often boresome and not altogether satisfactory, particularly in the summer months. Many attend out of courtesy; and those *really interested* are only the parents and a few intimate friends.

My class is organized in a club form, meeting about every three months at the home of a student or at the studio. An informal recital is given each time following a short business meeting. In this way there is a continued incentive to prepare a good recital piece and the interest is kept up in the class.

Occasionally a few friends and the parents are given invitations to meet with us and they really enjoy the program.

The club has its officers, colors and class pins. Small dues are paid by the members, this supplying a fund for decorations, refreshments and other interesting items. The comparison of the students' work shows so well their progress; and they are thus interested in one another's work. Another thing it brings out is confidence; and when a public recital is given the students are much more at ease.

Often class members play a study number to show their work on exercises, a study piece, or sometimes just a recreation number only, while others give a reading on composer's life and works.

The supply for interesting programs is inexhaustible and the meetings are looked forward to with considerable anticipation.

Altogther, I find it a very practical way of getting good results from my class.

CLIFFORD C. BROWN.

How I Use My Etude Magazines

TO THE ETUDE:

January is a good time for an inventory in the house as well as in the store, for then so many things are accumulated that we cannot use them efficiently. It is a good plan to take the music from THE ETUDE and sort it according to special types. Some very attractive volumes may be made by pasting the music to be kept for special occasions in THE ETUDE itself. For instance, I took the number for March 25th and pasted children's songs and piano pieces in it for the use of my two small children, who are beginning music. Then I took the November 24th and put some of the lovely Indian melodies in that. I used the July 25th for patriotic music and the Christmas issue made a very lovely scrap book for all my Christmas music and clippings. In this way I saved much of the reading matter I wanted and yet had my music sorted so that I could find any piece readily. All the other copies of the year, with the music I did not wish to keep, went to a young girl who is getting ready to take a conservatory course.
E. P. M.

Musical Smiles

Temperamental

PHILIP SOUSA, the noted band aid at a musicians' banquet in k, "I'll tell you a band story. A ving away for dear life, marched the residence section of a city ale-faced woman ran out of the l rushed up to the bandmaster. sir,' she said, 'will you please ng as you pass our house? My and is very, very musical.'"

Jazz Jabber

vere at an open-air band concert ceased humming a bit of the he band was playing and turned cort with the question, "What's of that air?"
ir—what?" he asked.
ir tune," she replied.

Bright Child

BETTY had several children playing with her. Suddenly her mother heard wild shrieks and wails, and rushing to the playroom she asked anxiously, "What's the trouble, Betty?"

"Nothing, mother. We're just playing opera."

Keyed Up

THE following order was received by a firm of piano makers:

"Dear Sir: Please send a string for my piano. Have the string tuned to G before you send it, as my husband can put it in, but he can't tune it. Mrs. X.

"P. S.—It's the G string on the right side of the piano."

Q. What is the difference between a fiddle and a violin?"
A. "About five hundred dollars!"

The Child's Approach to Music Study

To win the enthusiastic interest of the boy or girl at the very outset has always been one of the biggest problems in music teaching. Leading educators agree, today, that this can be best accomplished by enabling the youngsters to *make music in their own way* with the aid of that universal musical instrument—the Harmonica. After they have become proficient on this instrument they will take naturally and enthusiastically to the study of the piano, violin and other musical instruments.

A Hohner Harmonica for the boy or girl will help solve the problem. With the newly perfected Chromatic Harmonica they can play the complete chromatic scale. It is not a toy, but a real musical instrument which will promote self-expression, rhythm, and accuracy, and lay the foundation for serious musicianship.

Hohner Harmonicas are endorsed by such prominent group educators as—

Peter W. Dykema, Prof. School Music, Columbia University, New York.
Dorothy Enderis, Ass't Supt., Milwaukee Schools.
W. A. Gore, Supt. Schools, Webster Grove, Mo.
Nellie C. Hudd, Principal Mozart School, Chicago.
Harry Keeler, Principal, Lindblom High School, Chicago, Illinois.
Edward Randall Maguire, Principal Junior High School 61, N. Y. C.
W. H. Wheeler, Principal, Alton Community High School, Alton, Illinois.

—AND MANY OTHERS—

FREE BOOK OF INSTRUCTION

This interesting and helpful booklet comprises 16 pages of simple instruction illustrated with charts and pictures, and includes six popular musical selections arranged for harmonica and piano. Copies in any quantity will be supplied upon request.

BOURREE (Gr. 5-6) - - -

The Violinist's Etude

Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

Tremor in Violin Playing

IN NO class of musical instruments does tremor of the hands affect the production of tone so unfavorably as it does in instruments played with the bow. A player can manipulate the valves and keys of wind instruments, and strike the keys of the piano more or less successfully, with trembling hands and fingers; but let the bow-hand of the violinist, 'cellist, or other bow instrument player commence to tremble, and there is immediate trouble, for the hand must be steady to produce a fine, even, singing tone.

This tremor of the hand may be either temporary or chronic. I have seen violin students whose hands ordinarily were perfectly steady, tremble like a leaf under the influence of nervousness and excitement, especially the excitement which comes from playing in public.

A student describes this condition very aptly, in a letter to the VIOLINIST'S ETUDE as follows: "My bowing is good at times, but at others I haven't control of my bow. It seems I am nervous, and yet when I hold my hand out, it does not shake. My bow trembles on the strings, and it seems to me I have had this trouble from the start. I work all day and practice the violin two hours every evening, and I wonder if it is the work I do during the day which affects the nerves.

"My teacher says she had the same trouble and says I will overcome all that, as I get farther advanced on the instrument. Sometimes I am steady with the bow, and at other times I am a nervous wreck. What do you think? Will I overcome this nervousness, and do other students have the same trouble?"

Almost every player on the bow instruments suffers from tremor of the hands at certain times, such as in the excitement of public performance, or when the nervous system is out of order, although at ordinary times his hands are quite steady.

This trembling of the hands may be chronic, or temporary. If chronic it is known as trembling palsy. The palsy is usually a disease of old and late middle age, as we rarely meet with it in youth or early middle age. We have all noticed old people whose hands, and often their heads, shake continuously. When they sign their names, the writing is so wiggly that you can hardly read it. It goes without saying that a person in this condition cannot produce a fine, steady tone on the violin or other bow instrument. Trembling palsy is exceedingly difficult to cure, when it occurs in advanced or middle age.

Then we have people whose hands, and sometimes the body and head tremble as the result of temporary ill health, or a disease of the nervous system, which may be of only a few weeks' or months' duration, and which may or may not yield to medical treatment. A person who has a nervous break-down usually has this trembling of the muscles, and it is also common as the result of dissipation, especially heavy drinking. Confirmed inebriates often have such trembling hands that they cannot raise a glass of liquor to their mouths without spilling most of it.

With careful living and good medical treatment this condition often can be overcome, and the hand will again become steady with returning good health. Good food, regular exercise, correct diet, spending much time in the open air, sleeping eight or more hours in a bedroom with the windows open, abstention from tea, coffee, and tobacco, and cheerful surroundings are recommended in restoring tone to the nervous system.

Next we have the most numerous class of all, people who are normal in health, and whose hands are ordinarily steady, but who are apt to be afflicted with trembling as the result of occasional excitement, mental unrest, loss of sleep, or some temporary indisposition. There probably is not a violinist living who has not been troubled with tremor of the hand at some time or other. Many violinists bring on tremor with smoking. Joseph Joachim, the Hungarian violinist, who during his lifetime was considered by many authorities the greatest of violinists, never smoked at all the day of a concert; but, even at that, I have seen his bow tremble on the strings, from nervousness, when he commenced the opening measures of a concerto, on a great occasion. As he continued playing, this nervousness would wear off, and his hand would become perfectly steady.

It is an axiom among musicians in Europe that drinking of alcoholic liquors, if indulged in, should come after a performance and not before, as intoxicants have a tendency to upset the nervous system.

People in other occupations besides violin playing, have trouble with trembling hands, either permanent or temporary. A barber cannot shave with an unsteady hand. Artists, draughtsmen, telegraphers, penmen, often have trouble with tremor. Public speakers have fits of trembling, especially students who speak in public only occasionally, as, witness the trembling hands of the young graduate delivering his commencement oration. Marksmen with the rifle, or especially the revolver, cannot be unsteady and shoot with any skill.

In the beginning of violin study, the young student, whose health and nervous system are in normal condition, will often be troubled with an unsteady hand before constant practice has so developed his muscles that they will do their work steadily, without tremor. Any muscles which are not in constant use, are liable to tremble until they have become accustomed to their work. For this reason leading violin teachers always advise their pupils to do much slow bowing, counting eight, twelve, sixteen, and twenty-four or more to each bow stroke, at the rate of one count to a second. There is no better practice to develop steadiness of bowing than this.

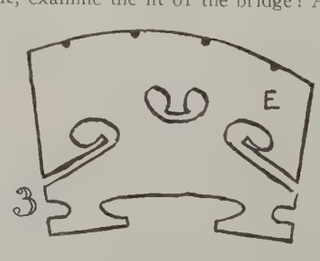
To sum up, if the violin student finds his hand trembles *at all times*, it is a case for a physician, who will outline a medical course for an improvement of the general health and of the nervous system. If the hand trembles only in cases of excitement and stage fright, and not at other times, the pupil must devote his attention towards overcoming this condition. Playing frequently in public will help; and the practice of very slow bowing should be daily and persistent. There are cases, of course, where the student never succeeds in overcoming tremor of the hand which comes from stage fright and excitement; but ordinarily it can be overcome.

Heavy work of some kinds has a tendency to promote unsteadiness and trembling of the bow arm; and the violinist who is obliged to follow another occupation, should try to seek work which is light and not too muscular.

The chances are our correspondent will overcome his tremor, as he gains experience in violin playing.

Hints on Repairing

Part II



By Otto Rindlisbacher

(Continued from last month)

OPINIONS differ in regard to the height of the bridge of the violin, depending, presumably, upon the amount of position playing. It is best to have the bridge just high enough to keep the string up some distance from the end of the fingerboard, thus avoiding any possibility of the string coming in contact with the board when there is pressure from the bow. Still, it should not be too high. When this is the case, too much force is needed to press the string to the fingerboard, especially in the higher positions—the string is stretched, consequently sharping the note unless the finger is shifted a trifle backward. The instrument will also be constantly put out of tune.

If your violin needs a new bridge, select the best grade of hard maple—it will last indefinitely, with proper care, and with age will become more and more sympathetic with your instrument. Results will improve accordingly. The correct thickness depends somewhat upon the particular instrument and a thorough test would not be amiss. It is safe to say though, that the thinner bridge produces a more brilliant and hard tone, while the thicker bridge acts on the order of a mute, giving a more mellow and pleasing effect. The extreme in either case is hardly advisable.

The bridge must fit snug to the top. First cut with a knife to as near a fit as possible; then lay a piece of very fine sandpaper on the top (sand side up) and work the bridge over it with a side motion, at exactly the place where it is to set. The strings must measure thirteen inches from nut to bridge on a full-size violin, and the *f* hole notches (inside) should indicate the place when correctly cut. Care must be taken not to tilt the bridge either backward or forward to prevent a rounding bottom. If there is a mysterious buzz or rattle, examine the fit of the bridge! After

removing the sandpaper, set up the bridge and place the strings over it. Judge the approximate height, remove bridge and with a knife cut down the top edge, cutting with the grain from the center. The E string can be considerably lower than the G, making it more convenient fo ing and also position playing.

The strings should be evenly spac distance depending upon the playe the E and G notches first, using a knife; then the D and A. Now s you have the right bow or curve by ing" across the strings; first from to the E; then from G to A; and notches smooth and rounding and accordingly. Now remove the brid with a file work off the top smoo even until the notches are just deep to hold the strings. If the bridge thick, "sharpen" the sides toward and finally sandpaper, making a ne finished job. For a steel E a sma of ebony may be inlaid to prevent string from cutting into the softer or the string may be covered with that point. Always see that the br in a straight, upright position.

Because the bridge is the condu vibrations from the strings to the ing-board, it cannot be too strong phasized that the utmost care m taken in its adjustment. Many of ou most players insist upon adjustin own bridges, for obvious reasons. an historical fact that Ole Bull, far from being a violin maker l refused to trust the most skilled w with his bridges; and many repa to-day are falsely attempting to co methods because of his fame. A from Ole Bull's violin might not be to the least critical player to-day

The nut, neatly grooved and ac is also more important than would mised by many, at first thought. open strings the nut acts as a st is therefore as important as is the p of the finger when used in stop string. First, it should be of hard rial, preferably ebony. Too low is the cause of imperfect tones o strings—dull, dead, rattling, and sharped; when, as many times we c case to be, the string is in contac or cut into the fingerboard for a of an inch or more. If the nut high, all the notes above the open are sharped when the strings are to the fingerboard. This is the a cause of some violins being "short —that is, the true fingering falls back towards the nut. The fingers more tired and sore from the high

A wise old saying is to "have the just high enough at the nut to admi out force, a common playing card them." For my personal use, th results are obtained by having the close, while the others, A, D, G, a a trifle higher than the preceding, in Space the notches evenly (the inci to govern the distance), with ple room for the strings, avoiding cutting corners. This holds true gards to the G especially, as the fin winding is easily cut or spread.

Half of the thickness of the string be sufficient depth, and should you h notches too deep, file the top of t The notches must have a rounding toward the pegs to allow the string freely. In this respect the G is thi important, due to the closeness of t to the nut and to the delicate co tion of the string. During very damp weather I have fastened the G to the D peg and the D to the for this very reason, and have saved many a valuable G string.

When the nut is too low it is not n necessary to apply a new one. Loose a knife, remove all old glue, insert a beneath it of the right thickness a glue. Wipe off any glue which ooz Prepared glue is the most convenie

f you have no clamps at your ner tie it down with a cord ightened strings over it. When dry, trim, finish and file the vith the fingerboard.

ases an instrument can be im- a few minor repairs on the If it is grooved from the n from the fingers or warped end, it can easily be leveled sharp plane. Remove the nut e plane from end to end until ves have disappeared and the el. Then finish with a long sandpaper, working the block end.

ird sets too close to the top, ating the use of a very low well to remove and taper the ward the nut, enough to ob- nt height. Some makers tilt ard toward the E or bowing

fingerboard become loose at move the entire board by care- fully inserting a knife blade. Remove the old glue by moistening and scraping, taking care not to scratch the wood. The bottom of the fingerboard may be grooved in the center so as to allow only the sides to touch the neck. Or the groove may be cut into the neck. By so doing the surface of gluing will be narrower and you will find it less difficult to get the parts firmly together. If no clamps are available, wrap heavy cord many times around the entire length of the neck.

Should the fingerboard be too high it is best to have the neck reset, as it is not advisable to taper the fingerboard towards the upper end, nor is it advisable in either case to place a wedge beneath the board or to taper the surface of the neck.

The width of the fingerboard and neck must, of course, be governed by the individual, but should always be of corresponding width.

Ebony is the standard material for the fingerboard.

(To be Continued)

Observing the Fingering

By R. Braine

no better plan for securing a ance of the fingering in violin aving the student mark above fingermarks large figures, ot help but be seen. This est done with a red, or other pencil, since these figures stand minently on the printed page nnot help but be seen. It is signal to a railway engineer. it is helpful to mark a ring xpression signs, and all spe- is for playing. Even if the to see these prominent mark- acticing, the mere marking of be beneficial to him, since it ss on his mind where changes are necessary, and the points es of tempo, loudness and so- hen he marks a circle around n mark, he naturally wishes at the words mean, and is t the meaning out in a musi- y.

in music has the fingermarks ll, indistinct type, sometimes blurred that the pupil, unless keen eye-sight, can hardly There is also a practice on some publishers to mark the ve grace notes or cadenzas in pe, much smaller than is used in marking principal notes. Sometimes such extremely small type is used for this purpose that the student cannot see it at all, and for the average eye, a reading glass would be necessary to decipher it. In such cases it is doubly necessary to re-mark the fingering in larger figures.

Observing the fingering is of extreme importance in violin playing, since in so many cases a fingermark indicates a change of position. If the pupil fails to see and observe it, he will fail to play the following passage in the proper position. This may last for several bars, since one position is adhered to until a new fingermark indicates a change of position. Thus, if the pupil is playing in the first position, and he neglects to advance to the third position where a fingermark over a certain note indicates such a change, he will keep on playing in a position where the passage may be either awkward of technically impossible in any case less effective than when played in the correct one.

The best teachers in violin playing mark the music for their pupils thoroughly, indicating continually where a change of position should be made.

Professional violinists studying concertos or other difficult compositions mark the fingering of the more difficult passages.

Violin Questions Answered

By MR. BRAINE

Starting in Orchestra.

I. H.—As you wish to embark in the orchestra business, but do not know just how to go about it, not being familiar with the business side of it, I would suggest that it would be a good idea for you to get a position as violinist in an orchestra which is already established and has a good business. In a comparatively short time you could learn a great deal how such a business is conducted. This information would be valuable when you come to establish an orchestra of your own. If you cannot obtain such a position, the only thing to do is for you to get together the required number of players and to rehearse until your orchestra is qualified to take engagements. If you expect to conduct a union orchestra, you and your players would have to join the union. I would suggest that you call on the secretary of the union in your city. He will give you a copy of the union constitution and by-laws, and a price list for engagements of all kinds. Many unions supply their members with printed contracts for use when taking a job. It will cost a bit at the start to buy music, but you can very often get a supply of second-hand music by advertising for it, or buying it from other leaders. Publishers often have certain orchestra pieces they wish to produce, which they supply gratis to established orchestras. After your orchestra is established you can get engagements by advertising, distributing cards and by telling your friends that you are in the market for jobs.

Choosing a Violin.

C. B. B.—The main thing is to get a good specimen of the maker's workmanship. Out of a dozen violins made by the same maker, some will be much better in tone than the others. The tone and quality will vary quite a bit. Even Stradivarius, king of violin makers, made some violins better than others. Strads are by no means all alike in quality. Get several violins to choose from, if possible; and if you are not an expert judge of violins yourself, get some good violinist or violin expert to help you make the selection. Any violin, new or old, ought to be worth $200, at least, no matter who made it, if it possesses sufficient power, has the requisite equality on all four strings, and the proper tone quality.

Violin Solo.

H. G.—For a solo violin piece for the occasion you mention, try the *Sohn der Haide*, by Kelar Bela. If, as you say, you can play two thirds of Kreutzer, you can play it.

Friedrich August Glass.

G. C.—As a rule violins, labeled or branded "Friedrich August Glass," are factory fiddles of varying quality and no great value. Sorry I cannot place a value on your violin without seeing it.

Veneered Fingerboards.

G. H.—Thousands of makers of factory fiddles have used veneered fingerboards and imitation ebony trimmings. This is done to save money. High grade violins have genuine ebony trimmings. It would be impossible to identify your violin without seeing it. 2.—Guadagnini and Gagliano did not make violins like you describe.

Beginning At Eighteen.

V. B. C.—Commencing the violin at eighteen, you had a very late start, if you expect to master the violin thoroughly and to become a really artistic player capable of playing standard concertos and difficult works of that character. However, if you have real talent, you might learn to do ordinary orchestra work and to play solos of medium difficulty. I could not say definitely as to your chances without hearing you play. You had better consult an experienced violin teacher in the nearest large city on this point.

Hopf Violins.

G. F. C.—Hopf violins, such as you describe, are usually factory violins of not much value. Occasionally we find a better one. Send for a copy of the ETUDE of August, 1922, which contained an extended article on Hopf violins. I could not give an opinion on your violin without seeing it.

The Klotz Family.

L. P. H.—There were several members of the Klotz family, all violin makers. The violins by Sebastian Klotz bring the highest prices. 2.—Do not buy a valuable old violin until you have a chance to examine and play on it. Get the violin dealers you mention to send you several from which to make a selection. Sometimes one violin may sell for two or three times as much as another made by the same maker; because it is a better specimen of his workmanship.

Braine Violin.

L. J. R.—The article, "Playing in Tune" in the December, 1925, number of the ETUDE, will give you many ideas which you can use with the pupil whose progress is so slow. For exercises for playing in time you could not do better than to use Wohlfahrt's *Easiest Elementary Method for the Violin*, Op. 38. If you are using more advanced work with this pupil, you can use the Wohlfahrt studies simply for learning time values, and taking only ten minutes of the lesson period with them. See that the pupil understands the time values, and counts the time. Keep her at it until she can really play the studies in time, even if it takes a month to a page. The Sevcik studies you speak of are admirable but in the case of the pupil you describe I would not use them until she can play through this first book of Wohlfahrt in time and tune.

B. B. A.—There are millions of violins with labels just like yours, so there is only one chance in millions that your violin is a real Strad. You will have to send it to an expert for examination, if you wish to find out if it is genuine, but the chances are that you would go to useless trouble and expense in so doing.

L. M.—I wish I could give you an easy method of distinguishing real Stradivarius violins from imitations, but I fear that I cannot as it takes a good knowledge of the violin and much study and experience to become an expert in judging violins. You will have to send your supposed Strad to an expert for examination. There is, of course, not more than one chance in a million that it is genuine.

Selling a Bergonzi.

J. H.—Before you try to sell your supposed Carlo Bergonzi violin, it would be better to get the opinion of an expert, as to whether it is a genuine Bergonzi, and what its value is. There is an immense number of imitations of this maker. 2.—A genuine Bergonzi is worth from $5,000 to $8,000, or possibly more in the case of an unusually choice specimen.

Loosening Strings.

R. W. K.—It is a "country fiddler's" habit to loosen the strings of the violin when through playing. When the violin is in constant use, the strings should be kept up to pitch. The object of letting them down is to save them, but the amount saved in this way is negligible, and we are confronted by the nuisance of having continually to stop playing and tune, for if the strings are let down, it will take a vast amount of tuning before the violin will again stand in tune.

Violin Mute.

C. P.—I have made diligent inquiry of several large American music dealers, but none of them can tell me where the "American Velvet Padded Clip Violin Mute," is made or can be obtained. You say that it is an American invention, but none of these firms have ever heard of it. A very large number of appliances for the violin are patented every year. Some of these are manufactured in a small way for several years, and are then discontinued because of lack of demand. Probably the mute you describe has met a similar fate.

Wire Strings—G String Work.

A. R. B.—A wire E string can be left on the violin as long as it sounds well. When it becomes false or the tone is impaired from any cause, a new one should be put on. There is no exact rule as to the length of time it will give good service. 2.—There is little difference in the thickness of the various brands of wire E strings sold in the music trade. 3.—A wire E the same thickness as a gut E could not be used at all. It would be too thick and would exert too much pressure on the bridge when tuned to the proper pitch. The bow could not set it properly in vibration, and the tone would be bad. 4.—Much practice on the G string is of the greatest benefit in developing the left hand, and securing the proper position of the hand, arm and violin. Most of the standard studies have good passages for G string work.

Value of "Strads."

K. S. V.—A genuine Stradivarius violin is worth from $10,000 to $25,000, according to its state of preservation and quality. Unfortunately there is not more than one chance in a million that your violin is a real Strad, as the world is full of counterfeits. You will have to take or send your violin to an expert for an opinion.

Pfretschner Violin.

A. J.—According to the label in your violin, it is a copy of a Stradivarius, made in 1716 by Johann Gottlieb Pfretschner, a well known German violin maker of the eighteenth century. Pfretschner, while he could not be classed as a famous maker, made some creditable instruments. He worked at Markneukirchen, in Germany, where an immense number of medium grade instruments have been made in the past 200 years. You could only ascertain whether your violin was actually made by Pfretschner himself by showing it to an expert.

Violin Label.

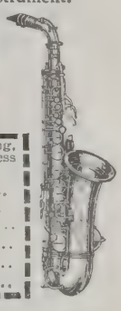
O. F. B.—The label in your supposed Stradivarius instrument is correctly worded but this is no sign that it is genuine, since the makers of spurious violins take care to use labels which resemble the genuine as closely as possible.

Value of Violin.

C. B.—I cannot estimate the value of your violin without seeing it. The maker is not well known. The violin is probably of modern German make and may be a very good instrument. Any violin fashioned carefully by hand by a good violin maker, and having a good tone might easily be worth the $125 you paid for it.

A Carlo Bergonzi.

M. R.—Before you try to sell your supposed Carlo Bergonzi violin, you ought to find out if it is genuine. A real Bergonzi is worth thousands of dollars, but there are hundreds of thousands of imitations with widely varying prices. The chances are that your violin is an imitation, but I could not say without seeing it. You might ship your violin to some of the violin dealers who advertise in the ETUDE for an opinion. You would, of course, have to ship the violin to them.



FRANK SIEGRIST, brilliant young trumpet soloist, three seasons with Whiteman, uses a Conn.

You, too,
can win success in music

SIEGRIST earns a princely salary for his brilliant solos. His mastery of the highest register amazes his hearers. He uses a Conn trumpet because, he says: "the intonation, valve action, and immediate response give added confidence in my playing."
There's profit and pleasure in music. You can fit yourself for it quickly. Start now to cultivate your musical bump with a Conn trumpet, saxophone, trombone, any band or orchestra instrument. Brief, pleasant practice enables you to win pleasure and profit. Send now for free book and details of **Free Trial, Easy Payments on Any Conn Instrument.**

Master Reproductions
The Pride of Artists

The true artist will find in these violins qualities supposedly found only in a real old master's violin. They are finished with a Cremonese oil varnish in detailed reproduction of every mark of use and age customary to a genuine old master. Each violin is subjected to two years seasoning process, then graduated and adjusted by experts.

A Guaranteed Instrument

Every Vega Master Reproduction is guaranteed to be perfect in every detail and for a period of one year to maintain perfect adjustment. Thirty-six years as manufacturers and importers of the finest instruments substantiates the guarantee.

Vega Master Reproductions $200 to $500
Other Vega Models $50 and up.

Motion and Music

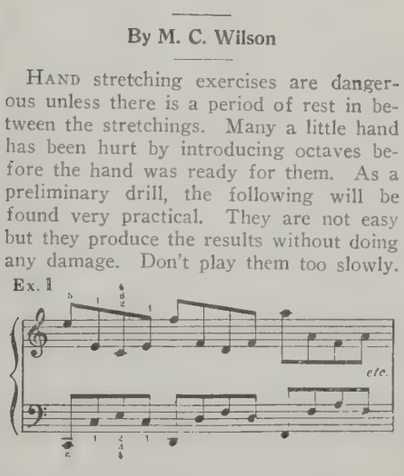
By Leonora Sill Ashton

It is an acknowledged fact among all thoughtful music teachers that a deep sense of rhythm is inherent in the whole human race and that the teaching of rhythm should be rightly a method of drawing it out of a child rather than of presenting it to him as a new thing.

The pigeon story is a good object lesson for this theory. A man on the top of a high building in New York waved at the end of a long pole a piece of cloth as a means of keeping a flock of pigeons in the air and thus teaching them to fly. The birds, in an effort to get back to the roof, instinctively adopted the rhythm of the waving cloth.

Thus, instead of endless explanations and countings let the pupils see in the air the motion of the rhythm; visibly beat time for them in their earliest little marches and waltzes, even in the earliest finger exercises.

Pupils may also learn much about rhythm in the hours outside their piano lessons if they are trained to develop their powers of observation. Chopin described *tempo rubato*, stolen time, as "A tree's branches waving to and fro in the wind, while the trunk remained firm." Other examples in nature of rhythmic motion are a brook running evenly over the stones, the ripples on a lake caused by a stone thrown on its surface, the drip-drop of rain from eaves or from melting icicles, the flight of birds, the building of a spider's web. Lessons from the city, the whirr of machinery, the circling of wheels, the endless life and movement of the streets, likewise lead up to a fuller understanding of the ultimate beauty of musical rhythm.



If pupils see the motion of your hands as corresponding to the desired rhythm, if they have pointed out to them the wheels of life going around, if they are taken up to the house-top to watch the pigeons learn to fly, they will fit their first musical sounds, all unconsciously, into that mighty plan which governs the stars and the ebb and flow of the ocean.

Gradual Hand Stretching Exercises

By M. C. Wilson

Hand stretching exercises are dangerous unless there is a period of rest in between the stretchings. Many a little hand has been hurt by introducing octaves before the hand was ready for them. As a preliminary drill, the following will be found very practical. They are not easy but they produce the results without doing any damage. Don't play them too slowly.

Ex. 1

One Careless Practice Hour

By Hope Stoddard

It is of the utmost importance that the practice hour be begun in confidence and enthusiasm. Two things paralyze the constructive forces; fear and disgust; and if either of these be part of the student's attitude toward his "daily bread of music" it will simply do him harm to indulge in it. By the innate persistence of emotions that demand an outlet if they are given mental recognition, the musician's every movement will be hindered; his fingers will become heavy as lead; his voice will freeze in his throat; the notes will turn into undecipherable puzzles and the tones into sounds like squeaking doors and chugging steamboats. And worse, his habits of good technic will be undermined and replaced by slovenly ones. Thus, one careless practice hour not only will counteract the effects of a well-directed period, but also will create wrong impulses that only days of labor can overcome.

Rhythmic Methods

By Emil A. Bertl

Young pupils in general find it very difficult to comprehend the meaning of rhythm, and how to carry out difficult rhythms unless they are made to feel, through the sense of touch, the various beats. In the following example from Streabbog's Op. 63, Exercise XI

Ex. 1

it is an excellent plan to have the pupil count the beats as follows: "1 and a, 2 and a, 3 and a, 4 and a," the teacher at the same time tapping out the rhythm on the pupil's shoulder. Results obtained from this method are based on the fact that, though they cannot visually comprehend rhythm, they can readily feel it.

Haydn's "Creation"

"One moment I was as cold as ice, the next I seemed on fire; more than once I thought I should have a fit," wrote Haydn regarding the first performance of his great oratorio, "The Creation," a work that took him eighteen months to write.

"The first performance of 'The Creation,'" Cuthbert Hadden reminds us in his biography of the composer, "was of a purely private nature. It took place at the Schwartzenburg Palace, Vienna, on the 29th of April, 1798, the performers being a body of *dilettanti*, with Haydn presiding over the orchestra. Van Swieten had been exerting himself to raise a guarantee fund for the composer, and the entire proceeds of the performance, amounting to approximately $1750, were paid over to him.

"A year later, on the 19th of March, 1799, to give the exact date, the oratorio was first heard publicly at the National Theatre in Vienna, when it produced the greatest effect.

"Next year the score was published by Breitkopf & Härtel, and no fewer than 510 copies, nearly half the number subscribed for, came to London" (where, we may add, Haydn first began to compose the work to a libretto based on Milton's "Paradise Lost" and certain texts in Genesis).

Haydn's "Creation" was recently performed in San Francisco as the crowning achievement of the celebrations of California's Diamond Jubilee as a sovereign State in the Republic. The performance, given by 300 members of the San Francisco Choral Society, with an orchestra of men from the San Francisco Symphony Orchestra, was broadcast from KGO, the biggest broadcasting feat yet accomplished in the West. What would Haydn have thought of a radio performance of his masterpiece?

PIANO JAZZ
By Note or Ear. With or without music. Short Course Adult beginners taught by mail. No teacher required. Self-Instruction Course for Advanced Pianists. The Art of Skriabin

(*Continued from page 346*)

verse. He found the connection between the creating spirit of the universe and its re-mirroring in the creative activity of the single human individual. Skriabin transferred the innerly perceived principles of his artistic activity to the cosmic process. Aimless, like art, are the cosmic happenings. The creator, like the artist, creates his forms, only to destroy them again; he calls forth sufferings to overcome them. Striving and attaining relieve one another in eternally changing, rhythmical sequence. Here as there—the same aimless play, the creation of contrasts, only to equalize them again—a divine play!

The method of self-analysis revealed to Skriabin yet a last analogy; the original, fundamental creative longing, the thirst for life, that arises in spirit, brings forth in the beginning the contrast between the male and female, that is, between the active and passive, which we can set equal to power and matter. The reciprocal action of these contrasts conditions the Cosmic Eros. The world process is therefore fundamentally nothing else but an erotic act. The spirit or the power, the active principle—Prometheus—lavishes his creative tenderness upon matter; he strives for a complete union with it, to take on new form in new shapes.

Skriabin conceived his last unfinished work, "Mystery," to lead up to this cosmic moment. "Mystery" as a work of art should represent principally a synthesis of three arts: Poetry, music, and plastic art (mimicry and dance). The ideas of Skriabin about synthetic art were altogether different from those up to then proclaimed and realized. The three arts were not to complement each other, or, they were not to be brought into a relation of dependence on each other. Skriabin conceived them as three independent factors holding together in contrapuntal relationship, the putting together of which should result in an insoluble, artistic whole. In the "Mystery," Skriabin wanted to do away with the idea of stage and auditorium; there was to be no more theater, no more presenting, but, instead, a realistic experience of that which comes to expression through art. Therefore the boundaries between listeners and performers were to fall away. There were to be only performers, and no longer an inactive public.

Why Difficult to Understanding

IN analyzing, now, the reasons why Skriabin above all modern composers is so difficult to understand, and why he, more than anyone else, has called forth such a vastly varied valuation of his art, we find the answer best expressed in the significant words of Goethe: "We are used to see that man despises what he never comprehends, and the good and the beautiful vilifies, finding them often hard to measure." Indeed the great difficulty lies in the effort of our Western culture to "measure," and to measure with a standard which has little in common with the object to be "measured." Western measure will never fathom fully Skriabin's genius! It is indeed significant that Skriabin was born in Moscow, the one point in the world where, since ages ago, East and West have met. In Skriabin we have for the first time in art a combination of the Eastern soul experiences expressed in a Western medium. Hence its difficulty of comprehension for so many!

Skriabin's later works are perfect examples of a Western expression of Eastern concentrated thought. We have to admit that our Western art does not reach the heights of soul expression attained to by Eastern art. Only in music and poetry have we examples of the profound depths to which Eastern thought has penetrated. If, however, we take our Madonnas and pictures representing Christ, we have always terrestrial beings before us. To give expression to the soul, the visible form ought to be direct embodiment of the soul. This the artists of the West very seldom succeeded in bringing about.

Liszt's saying "that there is music which comes of itself to us, and other music that requires us to come to it," is, in the latter sense, most appropriate as regards the later works of Skriabin. In other words, Skriabin's art cannot be comprehended by means of external influences reacting on internal ones, but only through internal influences reacting externally. In music we are artistically furthest away from a rationalistic conception, while in painting and sculpture we still are rationalists, and are not yet able to express "soul" in pictures or statuary directly. Through Bach, music has succeeded in this respect.

The artist of the East plunges himself into deep meditation in regarding his object, until he has become completely one with it, and then he creates out of his inner self, unconcerned with all exterior form. It is told of Chinese artists that their chief occupation did not consist in actual material work, but in meditation on nature. Kno Hsi teaches in his work about landscape painting: "The artist must, before all, bring himself into spiritual communion with the hills and brooklets which he wishes to paint." Inner concentration meant more to these artists than exterior skill. Laws and reason are not factors which the creative genius must take into consideration; he stands "beyond good and evil."

Soul Experiences

SUCH an artist of the East Skriabin is indeed, and therefore the difficulty in understanding his later works lies in our concentration on reason, our trying to "measure" with objective rules, whereas Skriabin's later compositions are purely subjective. Skriabin succeeds in making us hear the Divine as such! Soul experiences! One power permeates the universe, calling forth all creation, spiritualizing it, manifesting itself in everything. Thus every single creation is not only an expression, but a possible perfect expression of the Divine, and perfection is the goal.

Music speaks a language which the thought cannot utter; it makes strings resound in our human hearts, which enable us to divine a Beyond to all thoughts. In Skriabin's art we divine a life full of soul, illumined with the warm sunshine of love, where all that man creates and that surrounds him, finds a way to his heart through his ear and his eye. (Skriabin in his last completed symphonic work "Prometheus," uses an instrument to project colors, for which he writes the same notation as he does for other orchestral instruments, considering this projecting keyboard as part of the orchestra.)

To such a beautiful and full life so little is necessary and yet so much—so little that has material value and yet so much that possesses sincerity! There lie the tasks before us, gigantic but not hopeless! Tasks for which Skriabin gave us the first stimulation and impulse, in which, however, even Skriabin himself points far, far beyond his own work. How full and beautiful would our life be if we were capable of feeling, with Skriabin, that all its narrowness sings out into blissful distances, that the deepest woe and most abysmal heaviness of life sings itself upwards to a strong, serene joyfulness, in which the shrillest dissonances of life resound in a calm, blissful harmony of creation!

Text Books for Summer Music Classes

Many years ago we presented in the columns of THE ETUDE a suggested plan of study for Musical History with the *Standard History of Music,* by J. F. Cooke. It was merely to point out that the forty chapters of this book could be divided into sections of five chapters, so that the course would last the eight weeks of the summer. This, together with the lists of talking machine records given gratis to all teachers, enabled the class leader to conduct a profitable and interesting mid-summer course, even though the leader had no previous experience in teaching the subject of musical history. There are a number of subjects which may be taught in similar way by any musician versed in the subject. Harmony is one of them and for this purpose we recommend the *Beginner's Harmony Book* of Preston Ware Orem, a delightfully simple work for young and old. For more advanced students *Theory and Composition of Music,* by the same writer, will be found most excellent. Technic may also be given special attention in this manner. *Philipp's Complete Technic,* and *Mastering the Scales,* by J. F. Cooke, make excellent material for this purpose. Any of these works may be had for examination, and teachers who contemplate conducting summer music classes are invited to write to the publishers for any particular information desired.

Commencement Awards

It is not always convenient to obtain suitable diploma and certificate forms for music graduates at the local art stores. To supply this need, the Theodore Presser Co. has designed several forms that are particularly appropriate, and we are prepared to supply them to our patrons at very reasonable prices. Certificates for grade promotions may be obtained for 6 cents and 12 cents, blank diplomas, printed on a good quality of paper, 18 cents, and parchment diplomas for 50 cents or 60 cents. The diplomas, 21 inches by 16 inches in size, have an artistic design and those at 60 cents have appropriate wording for a graduate in music.

Some schools prefer special wording and the name of the school engrossed in Old English letters on the diploma. Through an arrangement with a local artist, we can have this work done in a most satisfactory manner and at a reasonable price, using our parchment diploma form at 50 cents, but we would suggest to any patrons who desire this special work that they place their orders in ample time to avoid delay and consequent disappointment. At least two weeks should be allowed between the time the order reaches us and the day of the commencement, and, in cases where the distance is great, even more time allowance would be advisable.

As a graduation award for the honor pupils we have a very neat musical design in the form of a medal or brooch which may be obtained either in gold or silver. The price of the 10k gold medal is $6, the silver medal, $3, while the same design in a brooch may be had in 10k gold at $4, or in silver at $1.50.

The medals have space on the bar for engraving the date or the recipient's initials, and on the reverse side of both medals and brooches the recipient's name, date, etc., can be engraved at a nominal charge. We kindly ask our patrons to make the same time allowance for engraving medals as requested for engrossing diplomas. We will gladly quote prices for special lettering or engraving, but be sure to send the exact wording wanted when writing for these particulars so that additional correspondence and consequent delay may be made unnecessary.

The Storm, for Piano Solo or Pipe Organ
By Clarence Kohlmann

The many thousands of visitors to Ocean Grove annually have been delighted with the rendition of *The Storm* by Clarence Kohlmann on the Auditorium organ. We are about to publish this popular number as performed by Mr. Kohlmann and we will issue it as a piano solo and as an organ solo; in each case with a short descriptive analysis. There have been many "storm pieces," both for piano and organ, and some of them have achieved considerable popularity, but this one is about the best of all. In addition to the portions which are original with Mr. Kohlmann, a number of familiar themes are introduced together with some quotations from the great masters.

The special introductory price in advance of publication is as follows: For the piano solo, 25 cents per copy, postpaid; for the organ, 25 cents per copy, postpaid.

Bach Album
By Sara Heinze

It has been very gratifying to us to find that our efforts to make each addition to the Presser Collection the finest edition of that particular work have been noted by the teaching profession. The next piano volume to go in the Presser Collection is this new edition of Sara Heinze's fine selection of twenty-one easier compositions by Bach. They are principally selected from the *Suites* and *Partitas,* and will be found ideal as preparatory material to the more advanced Bach works, such as *The Well-Tempered Clavichord,* etc.

The advance of publication price is 30 cents a copy, postpaid.

New Music for the Summer Months

At regular intervals during the busiest teaching season, packages of new music are sent "On Sale" (returnable if not used) to piano, vocal, violin and organ teachers. Many of these teachers discontinue regular work in the spring or early summer, but a surprisingly large number find it worth while to keep on until fall, thus retaining a hold upon some of their usual pupils and adding new ones who wish musical instruction throughout a part of the vacation period. Such teachers need plentiful supplies of fresh, interesting and attractive studies, pieces, songs, etc., to stimulate study and practice at a time when the usual discipline is somewhat relaxed and the student is apt to heed the call of outdoor life rather than the duties of the practice hour. Just a few pieces with the right kind of appeal will go far to lessen the teacher's task and to spur the student to more earnest endeavor.

Our plan of supplying the teacher with selected assortments of new music, that may be returned if not found useful, is accepted, year after year, as the simplest way for a teacher to provide for the current needs of the class-room or studio. The new teacher, one who is just beginning to organize a class, will find this plan of particular assistance. Our teaching material for the youngest beginners is designed to make the first study work not only promptly helpful, but also just as enjoyable as possible.

"Summer New Music" is now being made ready, and all we need is a definite request from a teacher anywhere to start the first assortment on its way. Remember—no obligation to buy and no settlement until the season ends—when unused music is to be sent back for credit. The teacher's name, address, mention of the branch taught (piano, voice, violin or organ), and just the words "Summer New Music" is all we require. A postal card will suffice for this.

New First and Third Position Album for Violin and Piano

Although the first position lies at the very foundation of all violin playing, and although the students should be kept in this position for a considerable time, nevertheless, as soon as the ground-work has been done, the other positions should be introduced gradually. The foremost of these in importance is the third position. Our *Album of Favorite First Position Pieces* has been a very great success, and we propose now to issue a similar *Album of Favorite First and Third Position Pieces.* This new book will naturally be slightly more advanced than the first-mentioned, but, as far as possible, it will preserve the same characteristics and be suitable to follow it. The pieces will all be by modern writers, and every one of them will prove pleasurable to play.

The special introductory price in Advance of Publication is 50 cents per copy, postpaid.

A New Collection of Favorite Songs and Choruses For All Occasions

'Twas ever thus! Whether around an old melodeon, an old square piano, a worn-out upright or a fine grand piano, whenever a group congregates, the desire to sing always exists. Likewise, the school student looks forward with pleasure to bursting forth in song in the opening exercises of the school day. It is not uncommon for lodges to have singing, or for community gatherings to indulge in vocal recreation. There are books on the market giving material for all of these singing occasions, but because there always exists that desire for something new, and we can furnish something new, along with many old favorites, we have been inspired to prepare this new collection. As usual in collections of this character, the numbers will be arranged in four-part harmony, which can be utilized, or the numbers can be sung in unison. The desire is to give much for a reasonable price, as is indicated by the nominal price made for Advance of Publication orders of 10 cents a copy.

Five Little Tunes for F Little Fingers— Pieces for the Left Har By Mildred Adair

For a long time there has mand for very easy pieces for alone. Although we have som alog already, we are pleased that we have in preparation such pieces which we conside right for the purpose. Altho as easy as it is possible to ma have melodic interest and t constructed musically. We them about 1½. The play pieces will tend not only to left hand, but also to inculc edge of "key-board geograp elementary use of the damper piece has an appropriate title *Tower Chimes, March of the Enchanted Garden, Indian D Lagoon.*

The special introductory vance of publication is 25 cen postpaid.

The Penitent Pirates— Operetta By Paul Bliss

We take pleasure in announ have in preparation a new young people by the popula Paul Bliss. Mr. Bliss has very successful works to his c believe this new one to be fu standard. This operetta is two acts, and is just about the for an evening's performance ing too long drawn out. It its production an equal num and young men. The plot is affording abundant opportun turesque staging. The work difficult of production, how bright and very tuneful thro the choruses chiefly in unison logue is very clever and c easy to learn.

The special introductory vance of publication is 40 cen postpaid.

Twenty-four Caprices For Violin Solo By P. Rode

In pursuance of our policy the *Presser Collection* all of violin works in new and care editions, we have now in pre celebrated *Twenty-four Cap Form of Studies for Violin S Twenty-four Keys,* by P. splendid work belongs in the with the studies of *Kreutzer,* others. It is one of the books for advanced violin st new edition has been prepare care by Mr. Otto Meyer, who leading Sevcik exponents in

The special introductory vance of Publication is 45 cen postpaid.

Two and Twenty Little Studies on Essential P First-Grade Piano Tea By Helen L. Cramm, O

After a good meal most all a little dessert of a light cha characteristic is especially str folks, and after the teacher ha through a method or an inst it is very pleasant to them t thing unusually nice before what seems like another big *Two and Twenty Little Stud* used for just such a purpose. be used in conjunction with th of such a work as the *Presse Book,* or they could be used following it. From the Dalles to Minnetonka
Five Impressions for the Pianoforte
By Thurlow Lieurance

We have been as good as threatening to withdraw this work each month recently, but this month we actually make it a promise that Advance of Publication subscribers will receive their copies of *From the Dalles to Minnetonka* before another issue of THE ETUDE appears, and that we will give those who have not ordered a copy just this one more month in which to do so. It is so easy to get many commonplace things for the piano that the very difference of the numbers in this little folio should make it a tempting offering to any pianist of ability. These numbers are either based upon Indian themes or they possess that characteristic style which Thurlow Lieurance is able to put in his musical composition, giving the feeling of the great outdoors. There are five numbers in this folio, one being a new concert transcription of the famous Indian Love Song, *By the Waters of Minnetonka;* another a transcription for the piano of a very recent Indian song composed by Mr. Lieurance. The remaining three numbers are original piano pieces, and altogether the album in contents and physical makeup is of a high artistic order.

Remember the promise we have made in the foregoing paragraph and bear in mind that, while it is yet on Advance of Publication offer this month, a copy may be secured at 40 cents, postpaid.

Technic for Beginners
Preparatory to Hanon
Or Pischna
By Anna Priscilla Risher

This is a work for young students containing two-finger exercises, five-finger exercises, preparatory scale work and other first technic material in the line of finger exercises for daily use. All good folk knowing anything about the value of material in piano study, well know how much it means to the pupil further along to have good technical material for daily use. It is just as wise to provide something of this character almost from the very start, and such material, as a rule, is not provided in the average instruction book. These studies that Miss Risher has prepared answer this purpose better than anything we have seen. The Advance of Publication price is 35 cents a copy, postpaid.

Beginning with the Pedals
Of the Piano
By Helen L. Cramm

Every teacher of young students instantly will be attracted by the title of this work because of the scarcity of good material along these lines. The pedals mean so much in piano playing that pupils should be guided in the intelligent use of them as early as possible. Miss Cramm's work is ideal for taking the second grade student into this interesting division of piano study, and it does so with the same charm that pervades all of Miss Cramm's immensely successful works for little students. As the publishers of many successful piano educational works, we are frank to say that we have been hoping to secure just such a work as this for several years. It was a great pleasure to see such a work come to us, and doubly pleasant that it came from so gifted a writer of educational works for juveniles as Miss Cramm.

The Advance of Publication cash price is 30 cents a copy, postpaid.

Album of Octave Playing

Our Publishing Department has kept us "on the fence" with regard to the exact issue date of this work for some time, but we are glad to announce that this will be the last month that it will be held upon Advance of Publication, since all the editorial work upon it has been completed. The previous albums in this series of Albums of Study Pieces for Special Purposes have made places for themselves in teaching curricula throughout the country, and the merit of this new album, as well as the indication of interest in it by so many teachers, gives us assurance that it will take its place with its predecessors as best sellers in teaching works. As we have explained in previous notes, this album helps the piano student to master octave playing in a pleasant manner. In place of being confronted with page after page of dry octave studies, the pupil finds in this album interesting pieces which present this phase of piano technic in various portions of the composition. No teacher should overlook developing the pupil's ability to handle octaves. The first material in this book makes it possible to present it to pupils in the early third grade.

Remember, this is the last month that it will be offered in Advance of Publication, and orders should be sent in now while it is possible to record an order for it at the Advance of Publication cash price of 30 cents, postpaid.

Brehm's First Steps for Young Piano Students

Brehm's First Steps was formerly on the market under the publication of Brehm Bros. The entire Brehm Bros. catalog was taken over by the Theodore Presser Co., and this is to be the first edition of *Brehm's First Steps* to be put out since. This is an exceptionally fine beginners' book and the tuneful and interesting material in it is what makes it worthy of our reprinting it, despite the many beginners' books now on the market. Those teachers who like to teach the first study of the piano entirely in the treble clef will like *Brehm's First Steps*, since the treble clef in both hands is used in the first few pages. Those who know *Brehm's First Steps for Young Piano Students* will welcome this new edition, which will be revised and somewhat enlarged. Teachers who are hearing of the work for the first time in this announcement also should take advantage of this Advance of Publication offer which makes it possible to secure a copy at 25 cents, postpaid.

Standard Second-Grade Recreations for the Pianoforte

We have a series of albums that it has pleased us to designate as a Series of Reasonably Priced Albums. They are reasonably priced at 75 cents each and a wealth of material is to be found in every volume. *Standard Second-Grade Recreations* is to be a new volume in this series, and its contents will delight the player who has advanced only to the second grade. The numbers have melodic appeal, yet at the same time those qualities that help in developing playing ability. Teachers can use an album of this kind, giving lessons upon some numbers selected from it, and by the use of this volume keeping sufficient material before the young pianist to hold interest in moments spent at the keyboard outside of lesson periods. Then, again, the teacher who does not feel that it is best to give a volume to certain types of pupils, can be helped by having such a volume as this in the studio for ready reference in selecting second-grade pieces, since every one of these numbers can be secured separately in sheet form, if desired in that way, for the pupil's use.

The advance of publication cash price is 35 cents a copy, postpaid.

Album of French Composers For the Pianoforte

We have given the lovers of piano music volumes in the past covering various classifications and individual composers, and these previous volumes have met with such success that our editors have made every effort in preparing this *Album of French Piano Compositions* to make it of unusual merit. In compiling a work of this character many compositions are considered, and elimination after elimination is made until the real cream of available material remains. Most of the numbers in this volume will be about grades 4 and 5, just of about the right difficulty to interest the average pianist and to warrant their use by teachers who have pupils whose interest can best be upheld by seeing to it that they have a worth-while library of piano numbers to use, either in study or diversion. The *Album of French Composers for the Pianoforte* is offered in Advance of Publication at 35 cents a copy, postpaid.

World of Music

(Continued from page 327)

A "Carolyn Bebbe New York Chamber Music Society Prize," for a composition for piano, first and second violins, viola, violoncello, double bass, clarinet, flute, oboe, bassoon and French horn, is offered through the National Federation of Music Clubs. Particulars from Mrs. Edgar Stillman Kelley, Oxford, Ohio.

Clarence Eddy, America's "Grand Old Man of the Organ," who for fifty years has stood among the leaders of his profession, at his recent recital in Kimball Hall, Chicago, found the stage filled with tributes not only from individual friends but also from many organizations.

A New Cabinet Department of Education, to assist and supervise education, musical and otherwise, in the States and municipalities, is the object of a campaign to be launched and conducted by The American Council of Education.

The Music Teachers' National Association met for its Annual Convention, at Dayton, Ohio, on December 28-30, 1925. Excellent papers by men of national reputation were presented and delighted those in attendance. Miss Ursula Greville, editor of *The Sackbut* of London, England, was an honored guest of the Association. Officers elected for the coming year were Harold L. Butler, of Syracuse, New York, president; while those re-elected were William Benbow, vice-president; D. M. Swarthout, secretary; Waldo S. Pratt, treasurer (address him at 86 Gillett Street, Hartford, Connecticut, for information); and Karl W. Gehrkens, editor.

A Sum of Ten Thousand Marks has been set aside by the German Government to provide a prize for musical composers. The first award to be made in 1927 in association with the celebration of the one hundredth anniversary of the death of Beethoven.

A Wanamaker Memorial Bell, in tribute to the founder of the Wanamaker Store of Philadelphia, has been ordered from a Croydon foundry. It is to weigh fifteen tons, will be the second largest bell ever cast in England, larger than the famous "Big Ben" of the Victoria Tower of the Houses of Parliament, and the largest in the United States. It will cost £12,000; and its tones are to be broadcast.

A Carnegie Orchestral Loan Library has been founded at the instance of the Carnegie United Kingdom Trustees for the assistance of orchestras in schools, villages, country towns, clubs, factories and similar enterprises needing such help in Great Britain. A large library of orchestral music of the higher class is to be maintained; and for a moderate annual subscription the works may be borrowed for as much as three months. U. S. A., take notice!

Nina Morgana, an American soprano and a former protegée of Caruso, who is finishing her seventh season with the Metropolitan Opera Company, has been engaged for leading coloratura and lyric rôles at the Colon Theatre of Buenos-Aires for the season beginning at the end of May.

"Mozart," the Guitry-Hahn operetta which has been having such a success in Europe, is announced for American production next year. In it Mozart is portrayed as a young man of twenty on a visit to Paris, under the chaperonage of Baron Grimm, philosopher and skeptic. Sascha Guitry and his wife, Yvonne Printempts, are announced for leading rôles.

"Mississippi, Father of Waters," a symphonic poem by Ernest R. Kroeger, had its initial performance, with the composer conducting, by the St. Louis Symphony Orchestra, on Friday afternoon, February 19th. There was an ovation for the composer, at the end of the performance.

Julius Epstein, noted pianist and teacher, for thirty-four years the head of the Vienna Conservatory, died in that city March 3, 1926. Born at Agram August 14, 1832, his career had been an honored one; and he had numbered among his pupils such brilliant ones as Marcella Sembrich, Gustav Mahler, Paolo Gallico and Ernst Kunwald.

"Lionel and Clarissa," a ballad opera written by Charles Dibdin in 1768, has been revived and running in the Lyric Theatre of London for several months.

Princess Tsianini, our American Indian soprano, has been giving recitals successfully in Palermo, Naples, Rome and Florence.

A Unique Musical Collection is the six hundred settings of Longfellow's poems which have been assembled in the Longfellow Room at Bowdoin College in Brunswick, Maine. "A Psalm of Life" has inspired fifteen different composers; while "The Sea Hath Its Pearls" (a Longfellow translation of Heine's short poem) is represented by sixteen settings from England and one from Australia, among others. English composers recognized the musical qualities of Longfellow's verse long before his own countrymen awoke to the beauties of its rhythm and melody.

Gabriele d'Annunzio's Opera, "The Martyrdom of Saint Sebastian," had its Italian première at La Scala on the evening of March 4th. However, the presence of the patriot-poet seemed to create more enthusiasm than his opera.

First Garland of Flowers—Favorite Melodies in the First Position for Violin By Julius Weiss, Op. 38

This work has long been a favorite with violin teachers, since it presents good material that is most pleasing to the pupil who as yet does not have much of a technical equipment for violin playing. These little study pieces all are in the first position and the young violinist is helped by the simplicity of the piano accompaniments. The many violin works that we have recently added to the *Presser Collection* are indicative of just how carefully this edition of *First Garland* will be edited, and violin instructors may confidently turn to this Presser edition in seeking copies of this popular work by Weiss for future needs.

The advance of publication cash price is 35 cents, postpaid, and by the number of orders already recorded we expect to send out quite a few of these books to advance of publication subscribers when it appears from press.

Advance of Publication Offers Withdrawn

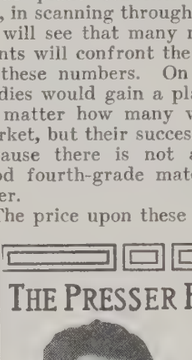
The only work we are withdrawing from advance of publication offer this month is the set of *Six Picturesque Studies* by Paul du Val. These are study pieces of very excellent character for use with fourth-grade piano students. The experienced eye, in scanning through these pieces, readily will see that many nice little technical points will confront the pupil in the study of these numbers. On merit alone these studies would gain a place for themselves, no matter how many works were on the market, but their success is doubly assured because there is not an over-supply of good fourth-grade material of this character.

The price upon these studies is 75 cents.

How Musicians Can Help To Spread Musical Influence In Their Community

ETUDE MUSIC MAGAZINE is a powerful factor in spreading influence for the good of music everywhere. Many music lovers, students and teachers in your circle of acquaintances are not subscribers. Why not do them the favor of introducing to them the ETUDE? The yearly subscription price, $2.00, is a mighty small investment for the substantial return it pays in its twelve splendid, inspiring, exhilarating issues. We will allow a substantial cash commission on each subscription secured (not your own), or, if you prefer, standard merchandise can be obtained in lieu of cash commissions for a stipulated number of subscriptions taken by you.

If you are interested, write to us, telling us on which basis you would prefer to take subscriptions, and we will be glad to outline an interesting, dignified and profitable plan for obtaining subscriptions.



Vacationists, Attention

If you desire that your ETUDE MUSIC MAGAZINE be mailed to your summer address, please let us have notice at least three weeks in advance of the date of publication, which is the first of the month, and we will be glad to see that the summer numbers reach you. In giving any change of address, always let us have both your *old* and *new* addresses. This is important.

Fraud Agents Are Active

Look out for swindlers. Pay no money to strangers, no matter how plausible the story may be. So-called college students, ex-soldiers, and others impose on the public. An honest man or woman soliciting subscriptions to ETUDE MUSIC MAGAZINE can produce unquestionable credentials. In paying money to a stranger, the risk is yours. We cannot be responsible for the work of unscrupulous men and women.

THE PRESSER PERSONNEL

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

Mr. Albert Ockenlander

Among the many forms of service to its patrons the Theodore Presser Co. maintains a department that is spoken of as the "Selection" or "On Sale" Department. When teachers or professional musicians accept our invitation to tells us their needs and let us send suggested material for their examination, the communication is turned over to the clerks of the "Selection" Department. Because only individuals having a wide knowledge of music and music publications are selected for this department, they are fully capable of giving helpful, intelligent and suitable suggestions to these inquiries.

One sub-division of this department cares for vocal music requirements, and Mr. Albert Ockenlander is in charge of filling orders for all such selections. He is well equipped for the important duty of seeing to it that worth while material goes to those wanting vocal music suggestions, having had such assignments in his twenty-three years with the Presser organization, as to have made him thoroughly acquainted with every portion of its great stock of music publications.

Mr. Ockenlander is a professional musician of note, having studied with leading voice teachers in Philadelphia, holding tenor solo positions in well-known churches and filling many singing engagements. Consequently he has a common interest and sympathy with Voice Teachers and professional singers throughout the country, who are confronted with problems in seeking material for use in entertainments, concerts, church or teaching.

SPECIAL NOTICES AND ANNOUNCEMENTS

PERSONAL FOR SALE or WANTED
Rate 10c per word

FOR SALE—A very fine old 'Cello—"Genuine" George Gemunder. For price and particulars address Mrs. Theo. M. Baumann, Philipsburg, Pa.

FOR SALE—Violin business of good reputation in Western educational centre. Box C. I. K., care of ETUDE.

WANTED—Vocal score "Babes in Toyland." Fred. Tighe, Carleton Place, Ont., Canada.

FOR SALE—Half interest in flourishing music school. Middle West—real opportunity. Address, A. Y. R., care of ETUDE.

ANNOUNCEMENTS
Rate 20c per word

CORRESPONDENCE HARMONY AND COMPOSITION—Simple, practical, thorough, under personal instruction of Dr. Wooler; no substitute teachers. Small monthly payments. Musical manuscripts corrected. Music composed, send poem, price reasonable. Write for prospectus. Alfred Wooler, Mus. Doc., 171 Cleveland Avenue, Buffalo, N. Y.

VIOLINS—Old or new, exchanged or sold on easy payments. Trial allowed. Write today. Violin Exchange, Rosedale, Kansas.

MELODIES HARMONIZED—Song poems set to music. Manuscripts revised, rewritten and prepared for publication. R. M. STULTS, Composer and Arranger, author of over 500 published compositions, Ridley Park, Pa.

MUSIC COMPOSED; manuscripts revised. Band and Orchestra arranging. Complete and guaranteed instruction in Harmony by mail. J. Rode Jacobsen, 2638 Milwaukee Ave., Chicago, Ill.

MOVING PICTURE PLAYING—"The Art of Pipe Organ Playing to Motion Pictures," a complete guide and reference work. M. M. Mills, 5 Oikema Apts., Lincoln, Nebr.

MUSIC COMPOSED AND ARRANGED, piano, vocal, orchestra. Send words or melody. H. O. Sontag, 1802 Chestnut St., Milwaukee, Wisc.

GROVE'S MUSIC SIMPLIFIER COURSE in Piano Playing, consisting of 12 illustrated lessons and 24 charts appearing as *Free Piano Lessons* in leading newspapers—now printed on cardboards and contained in portfolio of brown Arrah linen, bound with silk cord—will be mailed to you, postpaid, upon receipt of $2.00. Regular price, $6.00. W. Scott Grove, Publisher, Scranton, Pa.

FREE—TO PIANO TEACHERS sending name card or letterhead. A copy of new piece, "Valsette" (easy 3rd Grade). Address, Wilfred Despard, Millbury, Mass.

JUNIOR ETUDE

CONDUCTED BY ELIZABETH A. GEST

Playing Circus

By Rena Idella Carver

metimes I am a circus man
And boss the whole big show;
cause it's lots and lots of fun
This game I'll let you know.

hands are tents so high and round,
The gate is open wide;
straight and true the tent poles stand,
Ne'er leaning to a side.

w first the animals shall drill!
While I keep time, they all
rch in, and 'round and 'round they go,
The big ones and the small.

camels slow and stately tread
(A firm LEGATO TOUCH)
ponies light and mincing step
STACCATO, oh! so much!)

ge elephants with pond'rous walk
ig heavy CHORDS display;
greyhounds easy, graceful stride,
ARPEGGIOS I'll play.

rt comes the tight-rope walker brisk
nd up and down the keys
rough miles and miles of SCALES I go.
ute clown! You like to tease!

see the bareback rider jump
rom one horse to another!
clumsy THUMB is hard to train
o pass on to the other.

rapeze expert now we spy
n SKIPS so high and free,
ile band and orchestra proclaim
heir splendid artists three.

inger's sweetest voice is heard,
ANTABILE for sure
TONES so full, and rich and clear
rom keys I try to lure.

metimes I am a circus man
nd lead the whole big show,
now that I have shown you how,
ou'll play this game I know.

Circus Days

By Edna M. Schroeer

"HEY, Eddie, are you not goin' to the Circus?"

"Sure! You bet I am. Georgie! Wait'll I ask Ma if I can go."

"No; you're not going to that circus yet, young man," answered Ma. "I told you you couldn't go until you did your practicing; and I meant what I said!"

"Ah, gee! Ma; have a heart. I'll do it soon as I get back. Honest I will. You just wait an' see."

"You come right in the house this very minute, none of that after while business, or there'll be no circus for you to-day."

"Well, I guess I better do it, Georgie. Oh, shucks; a fellow can't have any fun when he has to practice all the time, Ma."

Eddie played over his scales as fast as he could, missing half the notes and getting the other half wrong.

While he was playing, a tiny elf came and stood on the bridge of his violin.

"Huh," he said, when Eddie had finished, "your fingers are not very good tight-rope walkers, are they?"

"Tight-rope walkers!" exclaimed Eddie, regarding the elf with interest; "what do you mean?"

"I mean your fingers don't stay on one string when they should. For instance, you put your fourth finger on both E and A when you played that B just then, did'nt you?" Eddie nodded at this. "Well," went on the elf, "that was wrong. See, this is what I mean," continued the elf, walking across the strings. "Now see if your fingers can do that." Eddie noticed that he had walked the chromatic scale, which was his new lesson:

Eddie tried to do it just as it had sounded when the elf walked it, and he played slower and ever so much more correctly than he did before.

"But you didn't put your fingers where I put my feet," complained the elf.

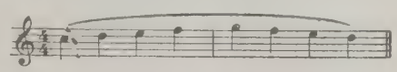
"Watch me again. I'll go slower this time," and he walked very, very slowly.

"Oh," laughed Eddie, "that looks exactly like a slow motion movie, doesn't it?"

Eddie tried again very slowly. But still the elf was not quite satisfied, although he did admit that it was much better.

"Follow me this time," he suggested, "put your fingers down exactly where I put my feet, and you'll get it just right. Remember, put your fingers exactly where I put my feet; and go slow. Don't move your violin so much, Eddie; hold it still or I'll fall off as sure as the world."

When they had done the scale over again, it sounded so nice, that they did it several times more. And Eddie found to his surprise that he really enjoyed practicing. He begged the elf to stay and do his other exercises and his new piece with him, and when the hour was up, Eddie was honestly disappointed.



He coaxed the elf to go to the circus with him to watch the tight-rope walker. When he got home, guess what he did. Yes, sir, he practiced some more.

Can you imagine how surprised his mother was? Of course, she didn't know anything about the elf from musicland, who made practicing as much fun as a circus.

The Pickaninny Picnic

For Very Liitle Juniors
By F. P. N.

LITTLE GIRL was taking her music lesson, and there before her on the page were some little black quarter-notes. They did not look just like any quarter-notes she had seen before, though; because some of them had a long curved line over their heads, and some had wee little dots. They looked like this:

And printed above them were two long, hard words—very long, hard words thought Little Girl, as she said them over after Miss Emerson, and wondered if she could ever remember what they meant. Here are the words she saw:

LEGATO AND STACCATO

"Those are pretty big words?" queried Miss Emerson, with a smile, "but I'll tell you how you can remember about them! Let us play that these notes are little 'pickaninnies,' and that they went off for a picnic. They had just eaten their sandwiches when a shower came up. There was a summer-house not far away, and they ran as hard as ever they could to get under its roof. Some of them got under all right; see them with the roof over their heads?" And Miss Emerson's pencil traced the 'roof' sheltering the lucky little pickaninnies standing beneath. "And pickaninnies who are under a roof like that always stand so close together that there isn't a bit of space between them. Hear them?" and Miss Emerson played the notes so smoothly that it sounded almost as if they had hold of hands!

"But there wasn't room for all of the picnickers to get under the roof, and the rain came pattering down on their heads as they stood outside. Just listen!" And Miss Emerson's fingers lightly played the notes so that they did sound for all the world like silvery little raindrops. "And if you look you'll see the drops coming down on their heads," she said; and sure enough, there they were!

Little Girl's eyes danced; and, very slowly, her fingers also made the notes sound like little pickaninnies under a roof, all standing very closely so as not to get wet. Then she made them sound like the raindrops falling on the poor little chaps left outside! And she was sure she could always remember how to play *Legato* and *Staccato* after that.

Club Corner

DEAR JUNIOR ETUDE:

All the pupils of our class have formed a club, under the instruction of our music teacher. Our officers are president, secretary and treasurer.

We have dues of five cents a month and with this money we are going to have pins made. We will also award prizes in contests held each month among ourselves, such as for the most practicing, best curved fingers, smooth scales and so forth.

From your friend,
FLORENCE SKEELS, Oregon, President.

DEAR JUNIOR ETUDE:

My teacher has a large music class. She has divided our class into two parts and organized us into clubs, for the purpose of studying History, Sight Reading and Ear Training. These clubs are called "Crescendo" and "The Young Musicians."

I belong to the Young Musician's Club.

We have enjoyed so much the "Child's Own Book of Great Musicians." We have completed and received our grades on Schubert, Bach, Handel and Mozart.

At each meeting of our club we have a short program, consisting of piano solos, duets and an orchestra number in which we all take part. A social hour is always a pleasant feature of every meeting, when we have some good musical games, refreshments and a general good time. During the hot summer days, at the close of our program, we have had the social hour out on the beautiful lawn of our teacher.

Our club has adopted gold and white as our color, and Marigold as our flower.

We meet every two weeks on Saturday afternoon and look forward to these meetings with a great deal of interest.

From your friend,
MARY CHILES (Age 10), Tennessee

Question Box

DEAR JUNIOR ETUDE:

Under what grade is the *Sonata Pathetique* of Beethoven listed?

E. R. T. (Age 13), Iowa.

Ans. Beethoven's *Sonata Pathétique* is generally listed under grade VIII, although all teachers do not exactly agree about the grades of many of the classical compositions. As a matter of fact the great composers do not "stick" to any one grade in their compositions, so it is hard to place them. Also it is much harder to grade music pupils than school pupils.

JUNIOR ETUDE—Continued

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original stories or essays and answers to puzzles.

Subject for story or essay this month—"Church Music." Must contain not over one hundred and fifty words. Any boy or girl under fifteen years of age may compete, whether a subscriber or not.

All contributions must bear name, age, and address of sender written plainly, and must be received at the JUNIOR ETUDE Office, 1712 Chestnut St., Philadelphia, Pa., before the twentieth of May. Names of prize winners and their contributions will be published in the issue for August.

Put your name and age on upper left hand corner of paper, and address on upper right hand corner of paper. If your contribution takes more than one piece of paper do this on each piece.

Do not use typewriters.

Competitors who do not comply with ALL of the above conditions will not be considered.

"WHAT I CAN DO FOR MUSIC"

(Prize Winner)

Music is one of the grandest studies that I know of; and the subject, "What I Can Do For Music," is very interesting to me. As a little girl of nine, I try to play the piano well and thereby to please the public. Have studied about fifty piano solos, some duets, trios, and quartets (four players on one piano). There are four children in our family; two girls, and two boys, ages 6, 9, 11, 12, and we have played piano quartets at thirty-three affairs during 1925.

What I can personally do best for music at my age is probably to play well. In about a month's time I am to give a recital alone. I have one of the best teachers, and my father looks after my work. I will play about eight good piano solos and Beethoven's Concerto, No. 4 in G major. I have all my numbers memorized and hope to give much pleasure to a music-loving audience.

GRETCHEN NEWHARD (Age 9),
Pennsylvania.

WHAT I CAN DO FOR MUSIC

(Prize Winner)

My sphere is narrow compared with the artists who benefit music greatly by their sublime rendition of the works of the great masters. Nevertheless, those whom I may benefit would probably not have the opportunity of coming in contact with the great geniuses.

I can make my home happy by playing, because my parents are fond of music and the more I play the better they like it.

One thing I can do for music is this: I will play for people when I am asked and I can play for old people and it makes them happy when they have nothing else to give them enjoyment.

If I play for somebody who doesn't care very much for music, and I tell him I like it, they take a little more interest in it; and then this unconsciously has a beneficial effect on them and soon they begin to like it too.

I like to practice and I do so every spare minute I have.

MILDRED WILHELM (Age 13),
Illinois.

WHAT I CAN DO FOR MUSIC

(Prize Winner)

Before I can do great things I must start with small things. Therefore I must use my practice hour in the right manner. I practice my scales, technical exercises and pieces regularly every day. Then during my spare time I can read musical magazines and learn how other musicians have reached their goal. Then I can tell my friends about these things. There are many people who do not like music. Why? Because the music that they have heard had no expression; so I should learn to play with much expression. I should not wish my school or class to give an entertainment without myself or someone else playing a little music. If I keep on practicing as I am now, I should be able to play the wonderful compositions of Beethoven, Chopin, and others, whose lives I am now studying.

MIRIAM GOLD (Age 13),
Wisconsin.

Honorable Mention for Essays in February

Jay N. Bostrom, Ernest Jacobi, Evelyn Small, Hilda Fenyo, Mayme Layddau, Mary E. Koons, Martha J. Baumleve, Mildred Shroyer, Grace Amelia Peck, Marguerite Creighton, Jane Lahey, Florence Masey, Janet Kiley, Mary E. Honsberger, Irma Sievers, Louise Krauss, Martha Menendez, Rita Marie Martin, Nora M. Fahey, Evelyn Jackson, Mary Cribbs, Evelyn Teander.

Puzzle

Hidden Composers

By Mrs. M. T. Johnson

IN EACH of the following sentences is hidden the name of a well-known musical composer, the letters forming it being in their correct order.

1. It is not well to disturb a chained lion, even though you may be quite safe.
2. However discouraging the conditions may have been, we heard no word of them.
3. I have taken up the study of music, hoping to become an able accompanist.
4. Are you having luck, Mr. Fisherman?
5. The tenth and eleventh chapters of Romans contain much loving counsel.
6. Have you seen the old Liberty Bell in its new suroundings?
7. I do not owe Bertha anything now.
8. I encountered nary a bee, though venturing quite close to the hive.
9. Mother, this is Mary's chum, Annie O'Daly.
10. Do you find the honey in the larkspur cells?

Answer to February Puzzle

Vi O lin
D R um
C larinet
H orn
C E llo
Ba S oon
Flu T e
T R umpet
Viol A

It was particularly difficult to pick the prize winners for the February puzzle as more correct answers were sent in than usual, and the matter of being NEAT was rather better than usual. Prize winners were:

Lucinda Hadsel (Age 14), Ohio.
Ernest Jacobi (Age 9), New York.
Ralph Goldeen (Age 11), California.

Particular honorable mention to Sophie Nasey, Rosemary Rainville, Andre Groleau, Lois Southam, Ruth Klumb, Dorothy R. Hook.

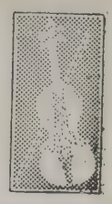
Honorable Mention for February Puzzles

Adonia Stargyk, Irma Sievers, Mary Cribbs, Leona Russell, John Burt Clark, Loretta Roder, Betty Hankins, Madine Masie Hunt, Doris Turner, Gertrude Nanta, Annie Schwaiger, Loraine Eisele, Dorothy Steley, Eileen Cest, Suzanne Stupelis, Hope Hedbergm, Veronica Dolan, Mildred Oudinot, Margaret Chamberlain, Helen Winter, Emma Jean Fisher, Lambert Dahlsten, Gretchen Kohler, Grace Allendorf, Margaret Voetter, Maud Helen Hallock, Romwald Porembski, Patricia Foster, Alfred Mormeau, Rebekah Baynes, Delia Smith, Muriel Williams, Mary Freeman, Marjory Allen, Dorothy Loomis, Ruth Jenkin, Martha Menendez, Evelyn Dobbs, Myrtle Olson, Alice Bell, Ruth Levin, Louise Taylor, Vadis Gardner, Charline Dawling, Delia Shiloff, Lewis Morton Clemmer, Eva Lydia Crawford, Marjorie Eckblad, Marguerite Creighton, Evelyn Mozley.

DEAR JUNIOR ETUDE:

Just to let you know I am an ardent reader of your pages.

Although I am not a subscriber I get your magazine nearly every month and can say that I enjoy the pieces greatly, while I find the articles very interesting. In these I have found a great many things that otherwise I should not have known.



In our High School, of which I am a member of the Junior Class, we have an orchestra that, besides playing to the school, goes out and plays at certain social functions. Another organization is our newly formed band. The boys, dressed in uniforms of maroon and white (our colors), make quite a showing at football games and the like, thus making it a real asset to the school. A boy in my class, who also is in the band, is trying to start an orchestra of his own and has asked me to be the pianist. I hope it is a success.

Hoping you will excuse this rather lengthy letter,

From your friend,
JOSEPHINE LONERGAN (15), New Jersey.

VIOLIN MATERIALS

Violin Collections and Studies

BEL CANTO METHOD FOR THE VIOLIN

By Mabel Madison Watson Price, $1.25

THE MOST ELEMENTARY OF ALL VIOLIN METHODS

A VIOLIN method that combines foundation technic with the art of melody playing. It is the product of years of experience with young students, and has attained unprecedented popularity with violin teachers. Prominent features are the careful arrangement of the melodious and attractive material in progressive order and the exhaustive treatment given each subject.

ENSEMBLE METHOD FOR THE VIOLIN

By Oscar J. Lehrer Price, $1.25

AN EXCELLENT METHOD FOR CLASS INSTRUCTION

TEACHING the violin in classes is being done with much success. The exercises in this work have been arranged in three-part harmony, each part of practically equal difficulty, and the class, being divided into three sections, may alternate in playing each part. The student not only develops the technic and art of violin playing, but also in ensemble playing.

POLYPHONIC STUDIES FOR THE VIOLIN

By Oscar J. Lehrer Price, $1.25

A WORK TO FOLLOW THE SUCCESSFUL "ENSEMBLE METHOD"

MR. LEHRER'S *Ensemble Method for the Violin* was received so enthusiastically that this volume to follow it was issued. It continues upon the same plan as the Ensemble Method, all studies being written in three parts, training those in violin classes to play in ensemble while developing technic. These polyphonic studies introduce the third position, shifting and double stops. As the studies are in trio form, they also are suitable as trios for advanced violinists to use in recreation or concert playing.

FIFTY SELECTED STUDIES IN THE FIRST POSITION

Compiled and Edited by C. Levenson Price, $1.00

THE best first position studies selected from all the great writers for the violin, arranged in progressive order, so that the book may be taken up immediately after any instructor. Alard, Sitt, Kayser, Wohlfahrt and De Beriot are among the composers represented.

SELECTED STUDIES IN SECOND AND THIRD POSITIONS

Compiled and Edited by C. Levenson Price, $1.00

THESE attractive studies are not at all difficult; they are such studies as the pupil may be able to take up after having done a reasonable amount of work in the first position.

SELECTED STUDIES IN THE 4th, 5th AND HALF POSITIONS

Compiled and Edited by C. Levenson Price, $1.00

A BOOK of studies, such as these, occupies a most desirable place in the violin curriculum. Studies exemplifying the fourth, half and fifth positions are scarce, at best, and ordinarily must be hunted up in various books that may be obtained only at considerable expense. This volume has the best in convenient form.

Ask for Our "Descriptive Catalog of Violin Collections, Methods and Studies."

Albums for the Home Music Library

CELEBRATED LIGHT OVERTURES

For the Pianoforte

Solo Edition, Price, $1.00
Four Hand Edition, Price, $1.50

THESE are overtures frequently played by bands and orchestras, but not so well known to pianists in this country. Both volumes contain the same overtures, and they may be played together effectively as pieces for three performers at two pianos.

ALBUM OF SONG TRANSCRIPTIONS AND VARIATIONS FOR THE PIANOFORTE

Price, $1.00

THE charming melodies of some of the best loved songs, both secular and sacred, are made available in these transcriptions for the pianist of average ability.

SCHUBERT ALBUM

For the Pianoforte **Price, $1.00**

SCHUBERT'S best original piano compositions, fragments from some of his larger works and transcriptions of the famous "Schubert Songs" are presented in this volume.

CELEBRATED COMPOSITIONS BY FAMOUS COMPOSERS

For the Pianoforte **Price, $1.00**

THIRTY-THREE superb piano compositions of the best classic, modern and contemporary writers, none of them too difficult for the average good player.

GEMS OF MELODY AND RHYTHM

Compiled by Blanche Fox Steenman
For the Pianoforte **Price, $1.00**

NEARLY seventy melodies, new and old, presented in the form of piano pieces, none going beyond Grade Three in point of difficulty.

REVERIE ALBUM

For the Pianoforte **Price, $1.00**

TWENTY-THREE melodious pieces in *Nocturne* and *Reverie* style. An ideal collection for the home, especially for Sunday playing, or when one wishes to enjoy a few quiet moments at the keyboard.

SUNDAY PIANO MUSIC

Price, $1.00

PIECES of moderate difficulty by the best classic and modern composers, admirably adapted for Sunday piano playing at home or church. The sales record of this volume has been most noteworthy. It should be included in every home library.

STANDARD BRILLIANT ALBUM

For the Pianoforte **Price, 75c.**

TWENTY-SEVEN popular pieces of a showy nature, but not difficult, making a volume of most desirable piano music for an evening's entertainment at home.

YOUNG FOLKS' OPERA GEMS

For the Pianoforte **Price, 75c.**

THE familiar melodies from the standard operas are always enjoyed in the home circle. These piano arrangements are in Grades 2 and 3.

YOUNG FOLKS' PIANO FOLIO

Price, 50 cents

MELODIOUS pieces of a medium grade of difficulty selected entirely for their entertaining qualities.

MUSIC LOVERS' DUET BOOK

For the Pianoforte **Price, 75c.**

AN ideal volume where there are two players in the family, or when musical friends "pay a call."

STANDARD SONG TREASURY

Price, 75 cents

FORTY-EIGHT excellent songs, secular and sacred, mostly for medium voice. The best modern composers are represented in this collection.

Books for Pianists and Lovers of Piano Music

What to Play—What to Teach

By Harriette Brower **Price, $2.00**

A very absorbing work. Miss Brower in an interesting and instructive manner discusses pianoforte material from the first beginnings of the work of the great pianists, and the material is grouped in program form.

Great Pianists on Piano Playing

By James Francis Cooke **Price, $2.25**

Everyone interested in piano playing, who has not read this very popular book, should secure it immediately. This is a group of study conferences with 28 virtuosi, in which are presented the most modern ideas upon the subjects of technic, interpretation and expression. Full page portraits and short biographic sketches are also included.

Principles of Expression

By A. F. Christiani **Price, $2.50**

This is an authoritative book on pianoforte playing. Practically all explanations are illustrated clearly by musical examples. The study of this work gives a full understanding of rhythmical accents, metrical accents, melodic accents, harmonic accents, dynamics and time.

Basic Principles in Pianoforte Playing

By Josef Lhévinne **Price, 60 cents**

This work tells how to do many things in piano-playing, stressing touch, tone and accuracy. Practice hints are given. Paper bound.

Piano Playing with Piano Questions Answered

By Josef Hofmann **Price, $2.00**

This is virtually two books. In one, close to 100 pages are an illustrated group of suggestions on artistic piano-playing by one of the greatest living pianists. It also answers direct, 250 questions asked by piano students. A valuable work for reading or reference.

Well-Known Piano Solos—How to Play Them

By Chas. W. Wilkinson **Price, $2.00**

Works of modern masters are well represented in this book, along with the favorites of the old masters. Around 100 solos are covered. This is an essential work for the pianist's library.

Master Lessons in Piano Playing

By E. M. Bowman **Price, $1.50**

Contains vital suggestions in artistic pianoforte playing, presented in the form of "Letters From a Musician to His Nephew."

Descriptive Analyses of Piano Works

By Edw. Baxter Perry **Price, $2.00**

Instead of working out each analysis upon the structural basis, Mr. Perry has given a poetic, dramatic and historic analysis or description of some of the greatest and best-known piano compositions. This treatment adds to a better understanding of each work or its interpretation.

Celebrated Pianists of the Past and Present

By A. Ehrlich **Price, $2.50**

One hundred and fifty portraits and biographies of European and American pianists of the past and present. A most reliable biographical work.

Pianoforte Music

By J. C. Fillmore **Price, $2.00**

Pianoforte Study

By Alex. McArthur **Price, $1.50**

Hints on piano-playing given in an interesting manner.

The Pedals of the Pianoforte

By Hans Schmitt **Price, $1.25**

Books for Followers of the Vocal Art

How to Succeed in Singing

By A. Buzzi-Peccia **Price, $1.50**

An excellent volume by a Master Voice Teacher, who offers valuable advice and suggestions regarding methods, teachers, students, engagements and other features of the vocal art as a profession. Those looking forward to achieving success in a lyric career will get from this book a new light on these subjects in their pursuit of the devious roads to success. In presenting this contribution to the vocal world the author employs his own superb qualifications and a distinct style in writing as a background.

Great Singers on the Art of Singing

By James Francis Cooke **Price, $2.25**

Most of the celebrated vocalists of the past 25 years are represented in this volume of advice and vocal experience. There are 27 full page portraits and biographies given. This is a work of absorbing interest to all music lovers and followers of the vocal art.

What the Vocal Student Should Know

By Nicholas Douty **Price, $1.00**

This book has obtained great favor because it tells in a concise manner many important things that the vocal student should know. As a conclusion of the work Mr. Douty has given a series of excellent daily exercises for each voice.

Diction for Singers and Composers

By Dr. H. Gaines Hawn **Price, $1.75**

This book covers an important side of the vocal art, and to have true vocal art as well as song writing art, one should follow the advice and suggestions Dr. Hawn gives in this helpful work.

Choir and Chorus Conducting

By F. W. Wodell **Price, $2.00**

There is much opportunity in the field of choir, chorus and community singing, and orchestra conducting. This book offers profitable information in the preparation of the musician to accept these opportunities.

Books of Special Interest to Music Teachers

Mistakes and Disputed Points in Music and Music Teaching

By Louis G. Elson **Price, $1.50**

Those many subjects, regarding which there frequently are disagreements, are straightened out by the positive information in this book, which covers all the essential points from acoustics and notation to piano technic and orchestration.

The Education of the Music Teacher

By Thos. Tapper **Price, $1.75**

Those who aspire to conduct their profession with knowledge and proficiency, should read this excellent book by Mr. Tapper.

Stories of Standard Teaching Pieces

By Edw. Baxter Perry **Price, $2.00**

With the information in this book teachers can provide that touch of romance, anecdote and educational information that gives zest to the lessons upon standard teaching pieces.

How to Teach—How to Study

By E. M. Sefton **Price, 60 cents**

The best teachers are endeavoring to improve their methods of imparting knowledge. This work deals with the fundamental and unchanging laws for obtaining the best work out of pupils.

Books for Young Music Students

Young Folks' Picture History of Music

By James Francis Cooke **Price, $1.00**

This is a very recent offering, over which teachers everywhere are enthusing. The high lights of musical history and biography are given in an interesting style that is understood easily by the juvenile. Such a work as this tends to hold the child student's interest in music. A most liberal number of well-printed and interesting pictures are given for the pupil to cut out and paste in the places provided throughout the book. The author has even gone so far as to explain to embryo musicians the manner in which melodies are written, stimulating their original ideas along these lines.

First Studies in Music Biography

By Thos. Tapper **Price, $1.75**

The thinking teacher sees to it that pupils learn as soon as possible something about the lives of great musicians. This book is designed for the teacher to use with pupils. With each composer is given a portrait, other illustrations and a set of questions on the text.

Pictures from the Lives of Great Composers

By Thos. Tapper **Price, $1.50**

While various composers' biographies form the center of this work, there also is woven delightfully around each biography, contemporaneous history. This gives the child vivid impressions of the great composers.

Music Talks with Children

By Thos. Tapper **Price, $1.50**

Although it is suggested by the author that the chapters of this book be made the subject-matter for talks with children, they are written in such a simple straightforward manner that they may be read verbatim by the teacher or parent.

Betty and the Symphony Orchestra

By Elizabeth A. Gest **Price, 10 cents**

This little illustrated booklet is a delightful story for acquainting little folks with the principal instruments of the Symphony Orchestra.

Imaginary Biographical Letters from Great Masters of Music

By Alethea Crawford Cox and Alice Chapin **Price, $1.50**

This fascinating little book gives a charm of romance and personality to musical biography by the unique manner in which the information is imparted.

Child's Own Book of Great Musicians

By Thos. Tapper **Price, 20 cents each**

A series of Biographies with picture placing and binding to be done by the young student. A separate book for each of the following masters:

Bach	Beethoven	Mozart	Mendelssohn
Schubert	Haydn	Schumann	Wagner
Handel	Verdi	Chopin	Grieg
		Liszt	

Sold Separately

These little booklets are used with great success by many teachers. After the child has read or studied the biography told so clearly, the child writes in his or her own fashion the story of the great composer in the space provided in the back of each of these booklets. This, with the pasting of pictures and binding as mentioned above, really brings about the making of the "Child's Own Book."

Petite Library

By Edw. Francis **Complete, $3.00**
Each, 40 cents

Pocket biographies of Handel, Haydn, Weber, Mendelssohn, Mozart, Beethoven, Chopin, Liszt and Wagner.

Books Every Music Lover Will Enjoy

Great Men and Famous Musicians On the Art of Music

By James Francis Cooke **Price, $2.25**

This interesting volume gives intimate discussions of phases of musical life and of music study by some of the world's greatest intellects. Great creative and executive geniuses have joined with foremost musicians in offering material that is both stimulating and helpful to students and music lovers. In the list of master minds who have contributed valuable advice to this work are the names of Crane, Damrosch, Dohnanyi, Edison, Gatti Casazza, Jeritza, Modjeski, Ornstein, Schwab, Sousa, Stravinsky, Van Dyke, Wister and many others.

Musical Progress

By Henry T. Finck **Price, $2.00**

Here and abroad this book has been commended and anyone, who by the furtherest stretch of imagination may be called a music lover, will find it interesting. It is written in a truly fascinating style and presents a wealth of musical topics in a liberal and enlightened spirit.

Secrets of the Success of Great Musicians

By Eugenio Pirani **Price, $2.00**

This is a biographical work in which the lives of the great composers are viewed from a different angle than usual. It has been well termed a series of inspirational life analyses of great composers. Every page provides entertaining reading, yet at the same time the educational qualities of this work are very high.

Life Stories of Great Composers

By R. A. Streatfield **Price, $2.25**

There are 35 biographies included in this volume, each followed by a chronology of the composer. As a book of reference or for one to read who desires to glean a knowledge of the great composers, this is an excellent work.

Old Fogy, His Musical Opinions and Grotesques

By James Huneker **Price, $1.50**

Even though you do not agree with all his opinions, you will enjoy the individuality of expression and the fact that "Old Fogy" does you good in making you think on the topics discussed.

Standard History of Music

By James Francis Cooke **Price, $1.50**

All that is interesting and important in musical lore is here given in the most readable manner. There are forty chapters that might be well termed forty story lessons in the romance of music. Liberally illustrated.

Music Masters, Old and New

By James Francis Cooke **Price, $1.25**

This work covers many of the more modern musical luminaries, about whom nothing is to be found in any other English writing.

Anecdotes of Great Musicians

By Francis W. Gates **Price, $2.00**

Anecdotes are always interesting and the music-lover will enjoy this collection, which consists of around 300 authenticated anecdotes of great composers, players and singers.

Musical Sketches

By Elise Polko **Price, $1.50**

This book is not only entertaining but instructive, since the stories or sketches given of the composers are facts with stories woven around them.

Music and Morals

By H. R. Haweis **Price, $2.25**

This book always will be a great favorite with music-lovers. There are interesting essays on musical subjects and very sympathetic and readable biographies of the great masters and informative chapters on instruments.

History of Music

By W. J. Baltzell **Price, $2.25**

A scholarly history, written by a well-qualified author with the assistance of a number of experts on musical history. It is a most faithful and accurate recording of the essential facts on the growth of ancient, classical and modern music.

"Everything in Music Publications"

Music Teachers—
Awake to This Real Opportunity

WHY NOT DEVOTE SOME OF YOUR LEISURE HOURS THIS SUMMER TO CONDUCTING A THEORY CLASS IN YOUR COMMUNITY?

Activity is the best publicity. When school studies cease, the progressive music teacher organizes Special Summer Classes of great benefit to the students, and to the teacher's prestige.

THREE GOOD REASONS FOR SUMMER CLASSES

Financially, the remuneration from class work is greater than from private teaching.

The Study of Harmony engenders an interest in the pupil and makes the regular course of study more attractive.

A Class in Theory is an excellent advertisement and increases the teacher's prestige.

The Text-Book that has proved most successful for use in teaching this study is

HARMONY BOOK FOR BEGINNERS

By PRESTON WARE OREM. Flush Cloth Binding, Price, $1.25

Brief—Simple—Vital—Practical—Distinctive

HERE is a Harmony Book without mystery. It has no rules, nor is it a re-hash of the old cut-and-dried harmonies. On the other hand, it is a fresh, new, sound treatment along modern lines. It lays a strong foundation for future musicianship by giving the main essentials of the subject in such simple, understandable and interesting language that it will prove invaluable in the class or for self-help work.

A most convenient feature is the introduction of blank spaces right in the book for writing the exercises, thus giving the pupil a permanent and readily consulted record of the work done. *Rules, footnotes and cross-references are dispensed with,* everything being inserted in the logical place in the body of the text.

An Admirable Text-Book for Summer Classes that have completed the Harmony Book

THEORY AND COMPOSITION OF MUSIC

By PRESTON WARE OREM. Flush Cloth Binding, Price, $1.25

AN unequalled guide in the practical application of harmony to composition. Anyone having an elementary knowledge of harmony is ready to take up the subjects which are treated in this work—such as Melody Making, Harmonizing Melodies, Writing of Accompaniments, Modulation, Modern Harmony and Musical Forms.

The whole aim of the book is to teach one to write—clearly, sensibly and fluently—and to know the "whys and wherefores."

In Your Spare Time at Home

Why don't you, too, get new ideas to use in your teaching, make your work a re pleasure and increase your income at the same time?

Enrollments now for Summer Courses

Founded in 1903 and advertisers in THE ETUDE columns since 1908

To ETUDE readers we have offered sample lessons from our courses—many are using them with success. Get these lessons, without obligation, and see for yourself how great a help they would be to you in your teaching. Courses endorsed by the world's greatest musicians—such as:

I. J. Paderewski, eminent virtuoso. ***Theodore Leschetizky,*** Paderewski's great teacher. ***Emil Sauer,*** of the Vienna Conservato
Walter Damrosch, eminent conductor of the New York Symphony Orchestra. ***Alexander Guilmant,*** the world-famous French Organist.
Moritz Moskowski, famous Parisian composer and teacher.

Special Certificates Awarded Graduates To Teach in Pblic Schools Without Examination

Mrs. Mary A. Sturm, of Montana, writes:

Thanks for prompt delivery of Diploma, of which I am very proud. I just received a letter from the State Board of Education to the effect that I am eligible to a State Certificate without examination. Thanks to your course.

Mrs. Lulu E. Diebel, of Oregon, writes:

I have successfully passed the State Board Examination and am now an accredited teacher in the State of Oregon. I owe this to your Normal Piano Course, for I tried to pass the examination before, but was not proficient in the answers and failed. Then I saw your ad in THE ETUDE and determined to try this course. It has been successful and I am very grateful.

There is a
GUARANTEE
With each course we offer a guarantee of absolute satisfaction or money refunded.
That puts all the risk on us and none on you.

Mr. Samuel Griffiths, of Massachusetts, states:

This will acknowledge my Harmony Diploma. At the commencement of my studies with you I was a Violin teacher with plenty of time on my hands. My class has grown to three times that size. I command an increased fee and have a waiting list.

Mr. R. C. Bolling, of Virginia, after completing four courses, writes:

The instruction in your Extension Courses is the best possible for one to obtain. The person who knows and can use his knowledge to enable him to do as well and just a little better, usually gets ahead—regardless of the method by which he received his information—whether in college or with a book by an open fire-place, or during his spare moments under the written direction of a teacher a thousand miles away. This is my third year in charge of the Music Department in the Normal School. I have nothing but praise for your courses, which have been of inestimable value to me in my work.

He holds a ce among native musicians and hestral activities in e able to devote his time to concert oloist and in ensemble.

orth Shore Festival Associa- ounces a prize of one thousand dol- n orchestral work, and one of five ollars for an American cantata for voices. In the latter announcement, ccessful work for children's voices panniment for only piano instead of tra, the prize will be three hundred

plete French Opera Company, in France, will tour the United t season, according to latest reports. r Hammerstein, widow of the fa- resario, is responsible for and back erprise.

nnual "Messiah" Festival at , Kansas, took place this year from to April 4. Three performances 's immortal masterpiece were given, them were recitals by the Flonzaley by Claire Dux, and by Dusolina as well as a number of programs lent of Bethany College.

Scott has finished an opera in one *Shrine*, and also a fantastic comedy, *nce*, the latter inspired by a Flemish He is reported to be at work on a gic opera in three acts.

m of the "Rosenkavalier" of vas given in London in April, the making the journey there to direct which was selected from his opera

Peace Angel" by Siegfried Wagner, some ten years ago, had its first rformance at Carlsruhe on March 11, with a kindly reception.

Young Artists' Contest of the Federation of Music Clubs will be hiladelphia on November 6-10, when ons will be held for Soprano, Con- enor and Baritone voices, and for oloncello, Piano and Organ players. rs from Mrs. E. A. Deeds, Morain yton, Ohio.

F. Claffey of Boston, won the one dollars prize in the recent "Old Contest." And now Uncle John Mc- ighty-three-year-old fiddler of Farm- Maine, while maintaining that he he judges in the past tournament e fair, has challenged Mr. Claffey to in a trial of skill with the public of s judges.

Dupre

Marcel Dupre has been appointed by the Ministry of Fine Arts to the post at the Paris Conservatoire left vacant by the late Eugene Gigout. Since winning his first student's prize at the Paris Conservatoire, M. Dupre has taken all the awards available in music at this famous institution, including the *Grand Prix de Rome* in 1914. His playing from memory of the entire organ works of a series of recitals at the Conserva- the Trocadero, first brought him to de attention.

Glee Club of Wesleyan Univer- Middletown, Connecticut, won first the tenth annual intercollegiate Glee test held in Carnegie Hall, New York 6th, with 268.6 points to its credit possible 300. Fifteen colleges com- rinceton winning second place and ersity of Kansas third.

Mrs. N. Auerbach, so long an honored instructor in the piano department of Peabody Conservatory, Baltimore, Maryland, is now living at a very advanced age and in feeble health, at her former home in Dantzic, Germany.

The University of Illinois Concert Band is now in its thirty-sixth season and on its sixteenth annual tour.

Vladimir Shavitch, conductor of the Rochester Symphony Orchestra, will conduct concerts of the London Symphony Orchestra and the Pasdepoup Orchestra of Paris, in the near future. Mme. Shavitch (Tina Lerner) accompanied him on the tour.

Weber's Home in Hosterwitz, near Dresden, at the time he wrote "Der Freischutz" and "Euryanthe," is about to be acquired by the Historical Society of Saxony, to be preserved as a memorial to the composer.

Four Prizes Aggregating One Hundred and Fifty Dollars are offered by *The Diapason*, for the best papers presented at the next meeting of the National Association of Organists. First prizes of fifty and second prizes of twenty-five dollars each are offered for papers on Organ Playing and on Organ Building.

Franz Kneisel

Franz Kneisel, eminent violinist, for many years a prominent figure in the musical life of the United States, and especially in the developing of an appreciation for chamber music, died in New York on March 26. Born in Bucharest, January 26, 1865, Mr. Kneisel came to this country in 1884, to become concertmaster of the Boston Symphony Orchestra; but his love for the more delicate art led him away from this position to devote his time almost entirely to the Kneisel Quartet.

The Philadelphia Orchestra is to make a tour of Europe in the spring and summer of 1927, according to plans of its management; and already ninety thousand of the necessary one hundred and fifty thousand dollar guaranty fund is subscribed.

In the Third Annual International Music Festival recently held at Boston, the first prize of $250 was awarded to the Polish chorus; the male chorus prize of $250, to the Swedish chorus; the second prize of $100 for mixed voices, to the German chorus; and the third prize of $50, to the Finnish chorus.

Ewing Underwood Smith, youngest and last to survive of the sons of Dr. Samuel F. Smith, author of the words of "America," died March 31st, at his home in Pasadena California.

$10,000,000 from the "Messiah" is estimated as a conservative figure for the royalties the British Government would have received from performances of this favorite oratorio, had an even very small royalty been imposed as is done in some European countries for similar works on which the copyright has expired, the receipts being used for encouraging the arts.

Mr. Scott Skinner, of Aberdeen, aged eighty, and Mr. John Wiseman of Bantry, County Cork, crossed the Atlantic to participate in the recent "Old Fiddlers' Contest" at Lewiston, Maine.

Herbert Forrest Odell, editor and publisher of the *Crescendo*, devoted to the interests of stringed instruments, died in Boston on February 25. As a teacher, composer, editor and publisher, he had been a wonderful influence in the raising of the standards in the particular field of music to which he was devoted, as well as to musical culture in general.

Franz von Suppé

Sophie von Suppé, widow of the famous composer of Opéra-comique, died recently at Vienna, at the advanced age of eighty-five. Once popular as a singer in light opera, she was the composer's second wife and after his demise devoted herself to establishing a von Suppé museum in a village near Vienna. Among his thirty-one comic operas and operettas and one hundred and eighty other stage works of various degrees of levity, "Pique Dame" and "Boccaccio" are best known in America.

The Great "Rosaria" Pageant, planned for this summer in Portland, Oregon, has been postponed one year on account of the decision to build a new Stadium on the site formerly used for this event.

In the Metropolitan Opera Season which closed in New York on April 17, there were one hundred and ninety-seven performances of forty-eight works by twenty-eight composers. Italian composers led with ninety-eight performances, Germany followed with forty, France with thirty-three, Russia with eleven, America with six, Czecho-Slovakia with five and Spain with four. "Fidelio," "The Magic Flute" and "Tarandot" are welcome rumors for the repertoire of next season.

The Pulitzer Musical Prize of Fifteen Hundred Dollars has been awarded this year to Mrs. Charles H. Marsh of Redlands, California, the first time it has been won by a woman. The award is made to "the student of music in America who is deemed to be the most talented and deserving, in order that he (sic) may continue his studies with the advantage of European instruction."

A Beethoven Festival was held at Amsterdam, Holland, from May 2 to May 15, Willem Mengelberg, leader of the Concertgebouw Orchestra, and well known in America through his work as guest-conductor of the New York Philharmonic Orchestra, was director of the celebration.

The Bicentenary of the Birth of Dr. Charles Burney, eminent English organist, composer and musical historian, was celebrated on April 11, at Chelsea Hospital, London, where he was organist during the last thirty-one years of his life.

It is the constant ambition of the editors and publishers of the "Etude" to make each issue of the journal worth many times more, in practical instruction, stimulating inspiration and real entertainment, than the price of the entire year's subscription. The music lover can not possibly find a better two-dollar investment.

"The Immortal Hour" by Rutland Boughton, had its American première at the new Grove Street Theatre by the newly organized Opera Players of New York, on April 6, with Alberto Bimboni conducting. The press was divided as to the adaptability of the work to American audiences, with the balance probably slightly in favor of the negative.

The Tenth Biennial Prize Competition of the National Federation of Music Clubs announces: $1,000 for a Symphony or Symphonic Poem; $500 for a Three Part Chorus for Women's Voices; $200 for a Trio for Violin, Violoncello and Piano; $100 for a Violoncello Solo; $100 for a Song and $100 for a Harp Solo. Particulars from Mrs. Charles Cooper, Peabody Institute, Baltimore, Maryland.

Calcutta, India, has a Symphony Orchestra in thriving condition. Its recent programs have contained such modern works as "L'Apres Midi d'un Faune," Elgar's "Enigmatic Variations," Grainger's "Haendel on the Strand," and Moussorgsky's "Kopak." The Bombay Chamber Orchestra has given ninety-six concerts during the last three years. Hail, India!

The Ojai Valley Prize of one thousand dollars has been awarded to Albert Huybrechts of Brussels for his string quartet which was performed for the first time on April 18, at the recent Ojai Valley (California) Festival. Honorable mention went to Arthur Farwell of Los Angeles, and Jean Rivier of Paris.

Walter Damrosch in the last week of March, conducted a concert of the Symphony Orchestra of Madrid, in the Comedia Theatre. King Alfonzo, Queen Victoria, the court, and many of the musical world of the capital were present. It was the first time that an American conductor had led this organization; and Mr. Damrosch was most cordially received.

The First Mozart Operatic Festival ever held in America was given in Cincinnati in the first week of May, when "Don Giovanni," "Cosi Fan Tutti," and "The Marriage of Figaro" were interpreted in English by the Hinshaw Opera Company.

Approximately Three Hundred and Ninety Thousand music lovers listened to orchestral concerts in New York City during the season just coming to a close.

Jean Sibelius

Jean Sibelius has received a commission form the New York Symphony Orchestra to write a symphonic work to be presented next season, with Walter Damrosch conducting. This continues the policy begun this season with George Gershwin's *Concerto* and Deems Taylor's *Jurgen*. Sibelius has done more than probably any other man of his nationality to popularize the artistic achievements of his country.

Mrs. J. J. Carter, founder of the Hollywood Bowl Summer Concerts Association, has resigned as president, because of "repeated differences of opinion with certain members of the executive board."

Boito's "Nerone" was the opera to open the three months' season at the Colon Theatre, Buenos Aires, on May 22. Claudia Muzio was *Asteria*.

The Oklahoma State Band and Orchestra Directors' Association was organized recently at a meeting held at Oklahoma City. Oscar J. Lehrer is State Chairman and a drive will be made for a state band law.

The Swift and Company Prize of one hundred dollars is offered this year for a setting for male chorus and with piano accompaniment, of the poem, "The West," by Catherine Parmenter. Particulars from D. A. Clippinger, Kimball Hall, Chicago.

A NEEDED WORK IN A NEGLECTED FIELD

POLYPHONIC PIANO PLAYING

PART PLAYING—COUNTERPOINT

BY

THEODORE PRESSER

EVERY pupil should be given some instruction in polyphonic playing. Students confined to exercises tending to develop only mechanical dexterity are apt to acquire involuntarily defects that leave no charm to their playing. These defects may be remedied by timely and frequent use of studies that are polyphonic in character. In this important branch of piano playing the pupil receives a training differing from the usual technical routine and is prepared for the study of the works of Bach and Handel and the classical composers. Polyphonic means many parts; that is, there are several parts or voices produced simultaneously; in other words, counterpoint.

This volume can be introduced early in the career of the piano student; between the second and third year is not too early. The material used is especially pleasing and, although it has been selected from many sources, it all has been especially adapted and arranged for this work.

What Educators Throughout the Country Think of this Work.

"Without exception, the best work of its kind I have ever seen. We will use it in Hood College Conservatory of Music. I am glad to join a large and mighty host of the profession in congratulating you on account of the merits of this timely work."

DR. JOHANN M. BLOSE,
Director, Hood College
Conservatory of Music.

"The very excellent Polyphonic Studies that Mr. Presser has written will stand in the future as a memorial to Mr. Presser's Musicianship."

KATE S. CHITTENDEN,
Dean, The American Institute of
Applied Music, New York.

"Two of our piano teachers are using this book and it is very satisfactory."

FRANK A. BEACH,
Dean, Kansas State Normal
School of Music.

"I am convinced that it will be of the very greatest aid in piano teaching. . . . . This book will, if carefully followed, undoubtedly lead a student to a place where he can take up the Bach Inventions and the larger polyphonic works with ease."

FREDERIC B. STIVEN,
Director, University of Illinois
School of Music.

"I was surprised to see how fully you appreciate the needs of the Student and the Teacher in your work on 'Polyphonic Piano Playing.' Your Preface is worthy of a place in any Lecture on Music. . . . May I thank you in behalf of the Students and Teachers in this School for your rich contribution to our studies?"

PROF. W. A. SMITH,
City School of Music,
Charleston, West Va.

"A very useful work, well graded, with happy selections. For organ students this volume is priceless."

CHAS. FR. MUTTER,
Baltimore, Md.

THE ETUDE

JUNE, 1926 | Single Copies 25 Cents | VOL. XLIV, No. 6

The Great Adventure

Every now and then some one writes us this sort of a letter:

"I am twenty-eight years of age. All my life I have wanted to study music. When I was twelve years old my father said that I might study during the following winter. He died in October and mother was unable to pay for the lessons. I went to work when I was thirteen and have worked hard ever since. Now I am married and have two children. I have been fortunate in business and have learned a great deal of music through reading The Etude and listening to the talking machine and the radio. Somehow I am not satisfied. I want to play, myself. My wife laughs at me when I tell her my ambitions. She thinks my hands are too stiff and that I will be too tired to stick to it in the evenings. She plays a little and I envy her every time I see her fingers hopping over the keyboard."

We know of hundreds of such cases and have asked many of our correspondents to report their progress from time to time. Some few were unable to "make a go of it." They represent those music-loving people who seem to be born without proper receptivity or proper means of muscle and brain co-ordination demanded by music study.

On the other hand we know of hundreds who have started after the age of twenty-five and who have found in music study one of the great adventures of their lives. Stiff hands become elastic with intensive training; sluggish mentalities are whipped into action by the wonderful rhythmic drive of music; mother finds new charm in life and father begins to understand hundreds of new beauties that he hears over the radio.

The article by Mr. John M. Williams in this issue will be found of very great aid to those who have had this ambition but who have been afraid to start upon the great adventure.

Musical Missionaries

One of the speediest ways of interesting the average present day audience of Rotarians, Kiwanians, or Chamber of Commercians, is to talk about export.

Thousands of American business men, whose factories and merchandising enterprises are approaching the limits of American consumption, are looking overseas for new territory.

Many vast American producers already have huge foreign markets. Where American commercial agents and American diplomats have dealt in true American fashion, "square, and open, and above board," American foreign trade has prospered marvelously. A few black sheep and blunderers have not been enough to injure seriously our precious reputation for "the square deal," despite the calumnies circulated by our jealous trade rivals.

Our commercial representatives, whether they are selling typewriters in Shanghai or Stetsons to the descendants of Montezuma, are the visible emissaries of America, by which our foreign brothers get their personal contacts with the land of the stars and stripes. We may congratulate ourselves that they have made so many fine records.

On the other hand the people overseas judge us by three other things which must be reflections of American life in their eyes:

1 Moving Pictures,
2 Magazines and Newspapers,
3 Music.

Recently we attended a moving picture performance in Havana. The fascinating Cubans looked upon an American middle west picture through the eyes of their Spanish ancestry. The picture was a fine example of the best in American cinematographic art. The story was human, and the homely prairie characters moved the audience immensely, although they seemed very strange to us when heard to the music of boleros, jotas, tangos and fandangos. At other theaters we saw announced pictures from inferior American manufacturers, so bad and so false in their representation of American life that our department of commerce in the interests of foreign trade should have had them confiscated at the borders of our country. The same may be said of a few of the rotten American magazines and newspapers displayed, as well as some of the very terrible "jazz" music banged and wailed out of the doors of foul-smelling night clubs. These things are very far from representing real American life, and they have unquestionably a very costly effect in creating impressions of the United States and United Statesians, which are utterly false in so far as the great body of our people is concerned.

Prunes

Because of the fact that the delicious prune was at one time the cheapest of fruits it became the joke of the old-fashioned boarding house. Prunes for breakfast became as certain as death and the tax collector. The prune eaters might rebel, but nothing could stop the daily dish from appearing with chronological regularity.

One of the reasons why many teachers and many pupils find their musical work monotonous is simply a case of musical prunes—the same old studies, over and over again year after year. True, every good musical course should have a graded series of standard studies, such, for instance, as the Standard Graded Course, to mark out the main highway, but in addition to this the active teacher will employ regularly a large amount of collateral material in each grade.

In fact the thoroughness of the pupil's training depends very largely upon how much collateral material is used. Unfortunately this is usually limited to the famous musical prunes, Czerny and Cramer. These have become prunes by virtue of their goodness. Practiced teachers find that there is really very little better educational material. But Czerny and Cramer lose their value, if they are permitted to become prunes through the failure to use other material.

"But," says the teacher, "how in the world am I to get it in, in these modern times with all their demands upon the child's attention?" This is a very just question. How, indeed? With some pupils with limited mental grasp we must admit that it is virtually impossible. With others a great deal of excellent work may be accomplished by giving material that the pupil can and should study by himself.

In our own teaching experience we found that it was expedient to have the pupil study without instruction as much material as possible, that he could and should be able to master without lessons. This meant easier material and plenty of it. If the pupil is continually under the strain of taking up new problems, learning new things, he becomes dependent upon the teacher. Give him a little simpler music to study by himself and he will take a fresh interest in his work. The sensation of exploring new musical fields without being bossed is thrilling in itself. Parents may object to the purchase of much additional music, but the teacher should be ready to show why this is most desirable.

Such excellent material as the twenty-four melodious studies of Gurlitt, the Melody and Technic of Stamaty (twenty-five very melodic studies), the Melodious Octave Studies of Löw (fine third and fourth grade tuneful octave material), the Etudes-Poésies of Haberbier (some quite difficult); the Scenes from Childhood of Kullak (really delightful educational pieces by a master teacher), the Twenty-four Melodic Studies of Vetter, these are only a few of hundreds of similar works with which the teacher should become acquainted and which may be investigated through the popular "On Sale" system, or at your music dealer's counter.

One of the great flaws in the work of many teachers is that they do not make themselves familiar enough with a sufficient amount of this teaching material to qualify as practical teachers. The physician who is unfamiliar with the pharmacopœia would be in a sad state. Yet there are teachers who know no more about this collateral material than just those studies that they happened to take up when they were students themselves. They live on a diet of musical prunes and feed the same prunes to their pupils. Teachers should continually investigate lists of new studies, such as that to be found in the "Guide to New Teachers," which the publishers of this journal will be glad to send "complimentary" to all who send a postal inquiry.

School Band Contests

Among the most interesting musical events in America at this moment are the school band contests, one of which was scheduled for May 15th and the other for June 10th.

Few people realize the size and character of the school band movement in America. Some of the bands are exceptionally fine. Others are, well—"pretty bad." We recently heard a school band play a Sousa March. The uniforms were magnificent, the instruments shone like the Taj Mahal, the drum major was a magician with the bâton; but the music itself was one of the most awful tonal experiences we have ever known. It sounded like an unholy union of Sousa and Schoenberg.

In the National contests, however, it is music that counts. The bands are marked for Intonation, Instrumentation, Tonal and Harmonic Balance, Tone Quality, Precision and Interpretation.

Whatever happens, the young men who take part in this work are unquestionably being benefited more than they realize. The thrill of the boy's soul is a brass band, and there are even little youngsters who will blow until they are sick for a chance to play in the band.

All hail the school bands of America!

For further information address the Committee on Instrumental Affairs of the Music Supervisor's National Conference.

Improvements in Church Music in America

The improvement of Church music in America has been most noteworthy. In many of our leading American churches at the present time organists who are veritable masters supplement the spiritual work of the institution in a way that is ideal. Some of these men are composers of high attainment and great breadth of treatment.

We recently had the honor of making the Sunday afternoon address at one of the leading Episcopal churches of Philadelphia (St. Luke's and the Epiphany). The organist, Dr. Harry Alexander Matthews, provided a program of lofty spiritual value and exquisite musical refinement. The Rector, Dr. David Steele, has long recognized the importance of such services which have brought throngs to his church.

One of the interesting signs of the times is the increasing demand for better church compositions and the decreasing demand for what some have been rude enough to call "ecclesiastical jazz."

The old idea that anything associated with sacred words is sacred music often proved a snare for the clergyman. Naturally, the spirit itself is the all-important element in all religious endeavor; but the same clergyman who in other days tolerated musical trash in his choir loft would have been one of the first to have objected to an illiterate, ignoble, insincere sermon in his pulpit.

Music Study and Mother

We were on our way out from a moving picture theater after a presentation of "The Big Parade," that bold reflex of the horrors of war, told with petrifying verity. One woman said to another:

"If that picture could have been shown in Germany, Austria, Russia, France and the United States in 1914, there never would have been any war. The mothers of the world would not have tolerated it."

All of which reminds us again that the hand that rocks the cradle not merely rules the world but actually runs it, when it is given the opportunity. Women depend upon a kind of divine intuition instead of that self-concocted "judgment" of which men are often so proud.

If it were not for the mothers of the world music study would never have reached its present vast proportions. The mother sees with the eyes of immortality. The father wants "his money's worth." The mother wants "her soul's worth."

The mother realizes that in music study, the little mind and heart, so close and so near to her own, will develop and expand in marvelous manner. She recognizes and appropriates music as one of the great forces of nature which is as necessary to the happiness, the material success and the spiritual enfoldment of her child as food, water, sunlight and raiment. She does not have to be told this. She knows it instinctively. It is all a part of the great plan.

This is why we find that mothers time and again have made all manner of sacrifices to enable their children to secure a worthy musical training. Father sees to the more "practical" matters of providing clothes, food and shelter. Sometimes he does not understand why mother is so persistent about having the child take music lessons. He does not vision the child's soul. If he would only stop to realize that he could provide clothes, food and shelter for a chimpanzee, but that he could not give it music lessons, he might realize why mother is so keenly anxious to foster that side of the child's life that is not simian.

The Etude and the Sesqui

The Sesqui-Centennial Exposition in Philadelphia, opening June First, is dignified by a musical program of unusual character and dimensions. It has been estimated that some five million people will be attracted to the city by this exhibition. As with many famous events of this kind the better part of the work of preparing the buildings has been necessarily crowded into a few terrific months. The exhibition promises to be one of great size and interest. Many novel feature attractions have been prepared, and there seems to be an atmosphere of surprise awaiting all those who attend.

The Etude's exhibition will be in Section K, Booth 36. We shall be glad to see our friends there; and also we shall be especially pleased to have them visit us at the home of The Etude, 1714 Chestnut Street.

Recognizing Faults

To be able to recognize a symptom, identify it, and quickly discover its source is the gift of a great medical diagnostician.

The smart music teacher is also a clever diagnostician. The main trouble with those who are depending upon self-instruction is that they either do not have the ability to recognize their faults or that they forgive them too easily. Remember the words of Carlyle:

"The greatest of faults I should say is to be conscious of none."

Symptoms are often the signals of vastly more important conditions that deserve immediate and serious consideration.

Everything Counts in Your Musical Success

An Interview Secured Expressly for THE ETUDE with

LAWRENCE TIBBETT

Of the Metropolitan Opera Company, New York City

r. Tibbett in "Tales of Hofmann"

MAY seem extravagant to say that everything one does counts to age in one's musical career; but, see the subject in the view of wn experience, this is unques-ly the case. The main thing in any il career is a high ideal. This, ac-nied with patience, confidence in star and incessant industry, usually plishes more than one really antici-

In my early youth, when I was ed in musical, dramatic and cultural s and activities, I was really not ously dreaming of a day when I be singing important rôles with the politan Opera Company, in New

Fate is a mysterious thing. ems to favor those who keep think-f the best in themselves and in their v men, who never cease working and possess optimistic patience.

A Worshiper of Beauty

INCE this conference must neces-sarily be more or less personal, let ay that from my childhood I have al-been a devoted worshiper of beauty. It t little whether it was the beauty of e, of art, of the theatre, or of music. ty fascinated me. I have noticed that this goal every experience seems to aking a formative part of my life. ow, joy, travel, financial strain, every-has been like some great hand in ng my career. Sorrow came to me very early age when my father, whom ered, went upon his duty as the sheriff Kern County, California, in quest of notorious highwaymen and robbers. were located in a Chinese Joss se. The doors were battered down my father entered alone. The robbers' was true and my fearless father was ght home dead. This was my first t sorrow, but it gave me a very dif-nt aspect upon life. It made me think of the seriousness of the great adventure through which we are all passing and how necessary it is to do one's bravest and best at all moments.

"My mother wanted me to become a physician, and I then aspired to be a writer. Singing, music and acting always fascinated me. At the age of twelve, I commenced to sing. I also studied the piano for two years in Los Angeles. The advantage of getting this acquaintance with music at an early age has been of very great importance to me in all my later life. I went to the high school at Los Angeles. This school had also what was the equivalent of two years of college work. Thus I had five years of Latin. All this has been useful to me since then, as the Latin has proven of especial value to me in acquiring other languages. I studied some harmony and composition in high school. While at the school, I became interested in theatricals and took the leading rôles in the school performances, which were usually conducted on a very fine scale.

The Community Theatre

"I THEN joined the Hollywood Community Theatre. I acted with this and other companies for three years, playing in many of the great works of Shakespeare, Lord Dunsany, Krembourg, Ibsen, Mary Austin, Shaw, Oscar Wilde and Anatole France. Later I joined the company of Tyrone Power in Shakespearean repertoire. This was most valuable experience for me, as the general character of operatic productions was changing all the time. Time was when the opera singer could make gestures like a railroad semaphore, and 'get away with it.' The new school of opera demands actors, and fine actors, as well as singers. There is no place where one can get dramatic experience like the school of the stage itself. Of course, I didn't know it when I was acting in the Community Theatre, but I was actually training myself in the best possible way for the Metropolitan.

"Meanwhile, I had been singing whenever I had the opportunity. At the age of seventeen I commenced singing in choirs. I sang for over eight years. My first position as a choir singer paid me five dollars a month and the amount seemed enormous at that time. It meant spending money for a lively youth. Later, I received forty dollars a month, then one hundred dollars a month. I also did recital work and became a member of the Gamut Club Quartet and of the Orpheus Club. The leader of both, Joseph Dupuy, was my first teacher and an excellent drill master he was in music of this type. This choir work I now look upon as an immense asset in my career. It introduced me to some of the most beautiful and spiritual of music and had an unquestioned effect in developing my conceptions of musical art. I sang the solo rôles in *Elijah,* in *Messiah,* in *The Seven Last Words* of Dubois, in the *Crucifixion, The Holy City,* and in numerous other works familiar to all good choirs. I know of students aspiring to go into opera who turn up their noses at church choir work. This is nonsense. The church choir gives one a spirit of reverence and poise and reserve which may be needed at any time in the career of the operatic singer.

"You see, everything really does count! Studying the piano, going to orchestral concerts, studying through the talking machine, everything. No honest effort is ever wasted. I even made a study of orchestration and read Berlioz assiduously. The more trained intelligence and experience one can bring to the opera, the more welcome will be the singer. Everything depends upon how you do what you are doing at the time. Church music, for instance, affords a magnificent drill in reading at sight. But it does more than that. The great music of the church is vital and very much alive. I gave to the music of the church the same vital expression and the same intense interest that I would to an operatic rôle. I never sang it as though I were wearing a pall of mock sanctity.

In Gilbert and Sullivan

"FOR a time I sang the Gilbert and Sullivan operas, with a very fine light opera company in California. This too was a valuable experience. Comedy is often more difficult than tragedy, and in Grand Opera it is greatly appreciated, when appropriate. The deft touch that comes with experience in Gilbert and Sullivan is a very much worth while form of practice for the larger proscenium.

"These experiences may seem quite enough for a young man; but there were others and many of them without which it seems to me that it would have been impossible for me to bring to my art that meaning for which every normal audience craves, and which it identifies as a human quantity. By this I mean that far too many performers and singers have seen very little of life itself except by observation. For a time, I was a cowboy on my grandfather's ranch, doing all the work of a cowboy and living the life of a cowboy. Again, I worked as a farmer in the hayfields. At another time I worked on an orange ranch. Once I was assistant engineer, working in overalls with a large stationary engine. During the war, I enlisted in the Naval Reserves and was at different times quartered in Vladivostock, Japan and China.

Lawrence Tibbett

"All these experiences did two things for me. First, they helped to build up my vitality. Vitality, according to Charles Frohman, is the secret of the success of most performers. You may be a wonderfully gifted artist; but if you have not the supreme good health and the strong physical and mental activity that go with it, you will find that the public may not pay much attention to you. The artist should make health a regular part of his business. Health practice is just as necessary as scale practice. The singer especially must come to his work with a body rested, fresh, spontaneous, and with a good digestion. Late hours, bad air, poorly digested meals, spell failure in the long run. The spontaneity that comes with fine health is quickly identified by audiences.

Seeing Men and Life

"SECOND, my varied experiences gave me an opportunity to see men and see life. They built experiences ranging from the most trivial to the most tragic and gruesome, as for instance when I looked into a store-room in Vladivostock and saw scores of soldiers who had been killed in action, now frozen stiff and piled up like cord wood waiting the time when the granite ice would permit the digging of graves. It is impossible for one of trivial domestic experiences to imagine those extreme conditions which mark human existence. Again, audiences are quick to sense this and they seem to be able to divine physically whether the performer is merely feigning things, or whether he has lived a wide and varied life.

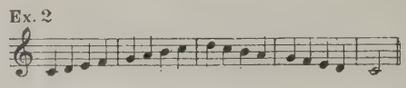
"In addition to other happenings, I decided to get married, and without very much idea of where our support was likely to develop. That does not matter much with a fellow who is convinced that he has found the finest girl in the world. I received great encouragement from the famous baritone, Emilio de Gogorza, the

An Historic Success

In January, 1925, the staid opera goers of the Metropolitan Opera House in New York went to see a revival of Verdi's "Falstaff," little realizing that the hero of the evening would be a young American, Lawrence Tibbett, who, although not playing the title rôle, carried away the laurels of the evening through his exceptional acting and singing. In the vernacular of the Rialto, he "stopped the show." The audience kept up such a roar of applause that even the old habitués of opera were amazed. Since then his progress in the company has been noteworthy in every respect. His career has been distinctive, in that he is entirely a product of American instruction and experience. His opinions and advice should be particularly useful to young American singers.

writer, Rupert Hughes and a prominent Los Angeles business man, James G. Warren. From the latter I borrowed money, with my life insurance as collateral, and my wife and I set out with our twin boys to attempt to get a start in New York City. My intent was to become a recital singer, as I had no idea that I had Grand Opera possibilities.

"In the great metropolis, I became a pupil of Mr. Frank La Forge. Mr. Lawrence Evans, of Evans and Salter, heard me sing and encouraged me greatly. Finally Mr. La Forge said that he thought I ought to try for Grand Opera, and that he would arrange an audition and also play for me then. I had my auditions and made my début in 'Faust' in the latter part of 1923. Nothing of much moment happened until the eventful 'Falstaff' performance when I could hardly realize that all of the applause was intended for a newcomer. It was then, however, that I saw that everything I had done in my life had counted toward what I was able to put into that performance.



"Personally, I lay very great stress upon daily work for the voice, just as daily exercise keeps the athlete in fine condition. When I am singing and rehearsing daily, I do not give so much time to vocal exercises. When I am not, I usually practice about two hours a day. In fact, the singer must make a business of singing, and his business starts from his physical culture exercises in the morning, and his cold bath, to the very last moment of the day. For my voice, Mr. La Forge and I find that practice on the vowel 'ay' as in May is best. This vowel is brilliant and sharp and seems to approximate the vocal chords in my voice better than any other. Mind you, another voice might require a different vowel, in the judgment of the singer and teacher. With me, the vowel E seems to raise the tongue high and tighten the jaw. Therefore, I avoid much use of E in practice. I always start in at middle pitch and sing softly and clearly for about ten or fifteen minutes. Then, when my voice is warmed up I try a few high notes, but I never use them in ordinary practice.

"The exercises I use are those worked out under my teacher, Mr. La Forge. These are of the simplest form.

Vale, Melodeon!

By James Francis Cooke

THE MELODEON was the great grand-daddy of musical culture in America.

When Louis Moreau Gottschalk was coaxing sighs from lovelorn youths and maidens with his *Last Hope*, his *Dying Poet*, and his *Ojos Creoles*, the old square piano was in the ascendancy. But the piano was then the instrument of the aristocrat. It cost much money. Music could not spread to the village homes and the distant farmhouses unless it was made possible by a cheaper instrument.

That instrument was the melodeon, alias the parlor organ, alias the reed organ, alias (alas!) the American organ.

The melodeon was likewise the piano of the covered wagon. Far out over the prairies they voyaged now and then with the more fortunate pioneers, harbingers of a higher culture. The advent of a new parlor organ was hailed with tears of delight by the "hands" who, sitting on the rail fence, heard the voice of some girlish bride singing through the open window,

"She can make a cherry pie,
Quick as a cat can wink her eye,
Billy Boy."

That was real music.

"Real Music" is an intangible tonal something that touches the heights or the depths of the human soul. It makes no difference whether that soul is the country-fiddler-loving soul of Henry Ford, or the Ghost of Eduard Hanslick, torn with the nineteenth century battles over Brahms and Wagner. It makes no difference whether the music is played by Albert Hoxie's band of harmonica-blowing boys or by the Philadelphia Orchestra. It makes no difference whether the music comes from the master in St. Petroleningradburg, Russia, or the humble singer in Cayote, Montana. If the intangible tonal something touches the heights or depths of any human soul, anywhere, it is "real music."

Immense Possibilities

THE POSSIBILITIES of the reed organ are immense. Edwin H. Lemare, eminent organ virtuoso, has an instrument of French make—a Mustel Organ—upon which he produces effects little short of marvelous. We have had some wonderfully fine American-made reed organs which have been endorsed and used by great European players in famous orchestral works.

A Melodeon Advertisement Common in the Elite Eighties

But they were not the American melodeon. The American parlor organ was only too often a cheap atrocity. Some instruments had superstructures which must have been designed by a pastry cook. We remember one which possessed a very large mirror, surrounded by scrolls of black walnut gim-crackery. Suspended over the top was a hanging lamp decorated like the contemporary barber shop. On each side were shelves for music books, and lower down were racks, probably to accommodate umbrellas or canes. Just why Yankee ingenuity failed to include a folding bed is not known.

This organ, like many of its brothers, had a startling array of carefully labeled stops, which in many cases were largely decorative. They were a lottery with many blanks. We once examined one parlor organ in which three-fourths of the stops were not connected with anything whatsoever—deliberate cheats. That is, you could pull as many as you chose, with little or no effect upon the wheezing reeds. The Vox Humana might as well have been called the Vox Caprina, because the result was more like the bleating of a goat than like the human voice.

There were thousands of such organs scattered all over the country. Most of them were sold upon the installment plan. The mortgage on the parlor organ kept pathetic company with the mortgage on the farm itself. In the old days, the melodeon was quite as much the badge of prosperity and social ascent as is the shiny new "flivver" to-day.

Our English brothers made great fun of the "American Organ." Notwithstanding this, its architecture at least gave it a very cordial welcome to mid-Victorian homes abroad; and the last stand of the American organ was, according to manufacturers, in England, where it sold for some years after America had turned toward the upright piano.

Rover Wept

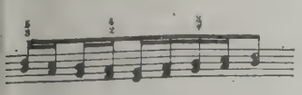
THE PASSING of the parlor organ in America was momentous. When Sister Imogene returned from Miss Smithers' fashionable boarding school for young ladies and was asked to "favor" by executing" the "Fifth Nocturne" upon the black walnut soda fountain up against the parlor wall, she turned up her pretty nose and her bustle throbbed with indignity. What a "come-down" from the conservatory pianos! Finally she did "oblige" by adapting Leybach's "War Horse" to the organ in such a way that the Newfoundland dog woven in the parlor rug fairly wept at the family's disgrace in not having a new, upright piano.

The parlor organ lent itself splendidly to the music of the Moody and Sankey age. It may not have responded to Chopin Valses, but it was infinitely better for "Hold the Fort" and "Bringing In the Sheaves" than its more elastic brother, the piano. That was long before organs were used in American theatres. The organ, particularly the reed organ, was supposed to have a kind of ecclesiastical sanctity. Our ancestors, who at one time regarded the bull fiddle as a particularly reverent aid to worship, looked askance upon the admission of the piano to the church—even to the Sunday school room.

Down on the farm, the parlor organ was a godsend. Mother, with her dear old toil-worn fingers, could now and then in the busy day wipe her hands on her apron and "set down and play a bit." This was the door to Elysium in many homes. Now the same mother, with a good part of the drudgery done by electricity, with a beautiful modern piano, with a splendid supply of educational books and magazines, the best talking machines and radios, is not placed so very differently from her sister in the great city. The jingling camp-meeting tunes have turned into the art settings of beautiful ecclesiastical works; "Money Musk" or "The Sailor's pipe" have grown into "Frülingsraus or Brahms' "Hungarian Dances." mark one thing—the joy that comes the newer and more complicated e sion is none greater than used to from the old parlor organ. It is all a ter of comparison. More than this, one who has dabbled in music, even most modest way, knows that, no standing the great educational impo that comes from the world musical tact made possible by the talking m and the radio, there is a joy in higher that comes only with the abi play even humble pieces oneself.

The Stepping Stone

WITH ITS limited keyboar wheezy reeds, its troublesom als, it put certain restrictions upon n education for the masses that cou afford a piano. On the other hand, l son of its very cheapness, it opened derful field for the study of ke music. Cyrus Herman Kotschmar tells that the very first money he in his youth was joyously investe parlor organ. There are thousa musicians living to-day who are g to the little old parlor organ for thei More than this, they realize that t legato of many American players from the fact that they started wi instrument rather than the piano therefore may all have a great resp this stepping-stone in American progress. It is likewise true that r gans of fine make will become incre popular in the future for artistic e ment in the interpretation of master Books of high-class reed organ mu have a large and deserved sale.



One of the foremost busines in the eastern part of the States recently said, "I firmly that the time is coming when body will be compelled to st musical instrument, because t nothing that so quickens the mi sures accurate thinking, stim the imagination, trains the m and develops many priceless used daily in business life, as v

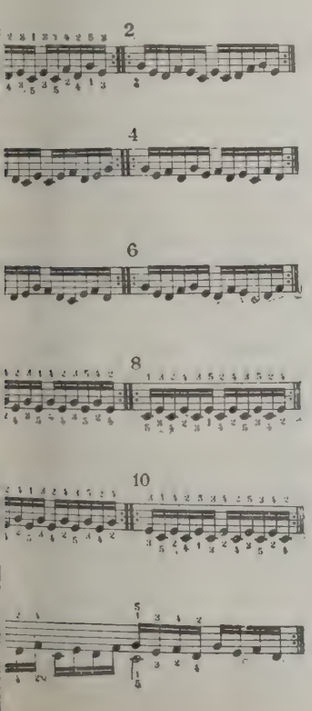
Thanks, hearty and sincere, to the great number of ETUDE friends who have written to us commenting upon the new spirit of ress and expansion which they have found in recent issues. We aspire to make THE ETUDE more than ever the inspiration of musical homes everywhere

A Profitable Lesson in Playing Double Notes

By W. A. HANSEN

PIL was about to begin playing binstein's *Barcarolle,* just as- ned by the teacher. The com- ntains passages like this:—

· that you will severely criticize g," said the pupil. "Thirds have used me a great deal of trouble. ıcticed patiently, but it seems as shall never be able to play them



hear what you can do," encour- eacher.

il played the first few measures. e thirds, however, were not at all ıould have been. The perform- forced and the pupil decidedly ous.

ting the playing, the teacher be- don me, please. I see that you nfidence in your fingers and that rs, as a result, have no confi- themselves. The proper playing thirds *is* difficult. It requires on the part of the performer ı permit me to put it in this way, on the part of the fingers. Do that hundreds of piainists are not xecute passages of this kind as t to be done? Why? Because ot be mastered? Decidedly not. and file of pianists are not capa- aying double thirds *beautifully* ey have not taken the trouble to fingers the necessary preliminary

An Important Problem

s a very important problem, but solved. I shall have to give you ıple exercises which, if practiced ıd carefully, will prepare your r the playing of double thirds. begin with broken thirds. These cises appear to be very easy, but o execute them beautifully a well- echnical equipment is necessary. er of fact, when you have learned em slowly and rapidly—*pp, p, mf,* —legato and staccato—and, above a beautiful singing tone, a tone arrying power, you will be a very ormer, indeed. Here they are:

"The left hand may play these exercises one or two octaves lower than they are written. Play legato at first and very slowly, right hand alone and left hand alone. Transpose each little study to all the keys, both major and minor. The importance of playing exercises of this kind in all the keys cannot be overestimated. Observe the fingering carefully. It is very simple. Try to produce a beautiful tone. Do not expect full results in a day nor in a week. You must learn to hurry slowly, for only by hurrying slowly will you ever be able to reach your goal. And do not forget that without brain-work there can be no effective finger-work. Vary the accents and the rhythm occasionally.

"Now let us find different fingerings for some of the exercises. Let us finger No. 3 in this way:

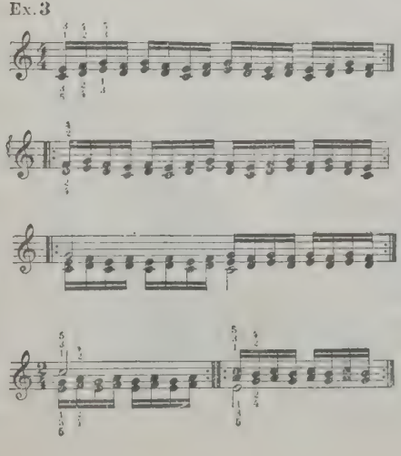
R. H. 3 5 3 1 2 4 3 5 4 2 1 3
L. H. 3 1 3 5 4 2 3 1 2 4 3 1

"No. 2 as follows:

R. H. 5 3 5 3 5 3 5 3 5 3 5 3
4 2 4 2 4 2 4 2 4 2 4 2
3 1 3 1 3 1 3 1 3 1 3 1
L. H. 3 5 3 5 3 5 3 5 3 5 3 5
2 4 2 4 2 4 2 4 2 4 2 4
1 3 1 3 1 3 1 3 1 3 1 3

"No. 5 like this:

R. H. 3 5 3 1 3 5 3 1 2 4 3 1
L. H. 3 1 3 5 3 1 3 5 4 2 1 3



"No. 6 in the following manner:

R. H. 5 3 1 3 5 3 1 3 1 2 3 5
1 3 5 3 1 3 5 3 1 3 1 3

"You should be able to devise other interesting fingerings.

"Now we shall use double thirds.

Ex. 3

"Be careful to strike all notes of the double thirds at the same time. Avoid excessive fatigue. Rome was not built in a day.

"After practicing these little exercises in the proper manner for a number of weeks, the fingers will have gained a great deal of strength and confidence. The fourth finger, in particular, will have become much more agile. And, best of all, you will have more than a mere preparation for the execution of double thirds, for the results attained will stand you in good stead in other departments of finger technic. Then you must practice the scales, both diatonic and chromatic, in double thirds. When you finally come back to the *Barcarolle,* your feelings will be altogether different from what they were to-day. You may also try to devise exercises of a similar character.

The Real Test

"Some time ago, you will recall, I told you of a test of real ability at the piano—the achievement of playing double thirds smoothly in a *pianissimo* with carrying power and *without the soft pedal.* How many pianists are able to do this?

"And now we will go to something else in your lesson."

"I am getting along slowly with the Chopin's *Nocturne in F-sharp major,* and this part is still difficult for me:

Ex. 4

I have procured the phonograph records that you recommended and I often wonder whether I ever shall be able to play the composition anything at all like Hofmann and Rachmaninoff do."

Preliminary Work

"Here again some preliminary work is needed," said her teacher. "Do you realize that in order to play a well-enunciated melody and a sub-ordinated accompaniment with one hand it is necessary to have fingers that are strong and also independent of each other? The following exercises should be played slowly and beautifully in all keys:

Ex. 5

"For good measure throw in this one for the left hand alone:

Ex. 6

"After a few months try to play this exercise *fortissimo,* but without pounding:

"Next construct an exercise from the *Nocturne* itself.

Ex. 7

"This is not sacrilegious; it is sensible! Transpose it to all the keys. This is for the left hand as well as the right hand. Remember that a good pianist ought to be ambidextrous—so far as his playing is concerned. The left hand must be drilled and trained as well and as thoroughly as the right one. You will say that this is easy to *talk* about and to *write* about, but not so easy to *bring* about. Well, hard work will move mountains. Do not play both hands together before each hand has mastered the problems separately.

Mechanical Exercises

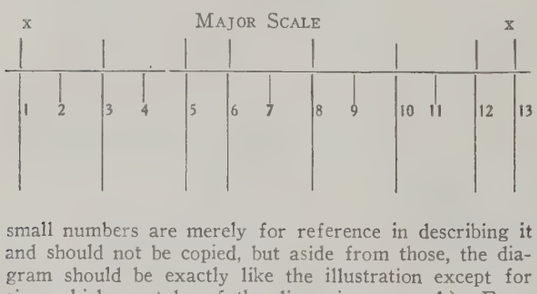
"Do not forget that every pianist must practice mechanical exercises. There undoubtedly are some who imagine that they can get along without them, but I can assure you that their playing would be greatly improved if they regularly and systematically devoted some time each day to purely mechanical work. A student ought to devise exercises for himself. You may construct others from this very *Nocturne.* Above all, learn to invent exercises that will prepare the fingers, wrists, and arms directly for the problems presented in a particular composition. If more of this were done, there would be less slovenly playing."

Women's Orchestras in 18th Century Italy

WOMEN'S orchestras seem like the last word in 20th century feminine emancipation, but according to Romaine Rolland, women were trained in the music schools of Venice in 18th century Italy. Each (of two conservatoires for foundlings) "had five or six assistant masters for singing and instrumental music," says this author in his *Musical Tour;* "and the elder girls, in turn, taught the youngest.

"The pupils learned not only to sing but to play all instruments; the violin, the harpsichord, even the horn and the bass viol. Burney says that they were able, as a rule, to play several instruments and that they changed from one to another with facility. These women's orchestras gave public cencerts every Saturday and Sunday evening. They were one of the principal attractions of Venice; and no foreign traveler who visited the city has failed to describe them for us. They were as pleasant to look at as to hear.

"I have often thought that we artists, above all others, should be grateful for the fact that we are able to make profit out of what is our greatest pleasure. Some men are inherent gamblers or drunkards, some are born vicious. If they indulged their natural tendencies they would proceed downhill to their ruin. I feel a great sorrow for those so handicapped at birth. Yet we artists find our greatest joy in expressing our desires in music. And yet while doing so we reap a monetary reward."—FRITZ KREISLER.



A Simple Help for Scale-Mastery

By EDWIN HALL PIERCE

Major Scale

KEYBOARD instruments, namely, the piano and the organ have the great advantage of a *homogeneous scale.* That is to say, one octave is just like another octave, and a scale in one key is just like the same sort of a scale in another key, although the peculiar arrangement of black and white piano keys and the different fingering used (merely for reasons of technical convenience) would at first sight seem to contradict the second part of that statement. With a right understanding of the matter, however, such as we shall endeavor to impart, the whole statement will be seen as absolutely true, and will take away much of the difficulty which the student encounters in mastering the twelve major and twelve minor scales. The writer has used this method with great success for several years, both with beginners and with more advanced students who were a little weak in applying the sharps and flats of key-signatures.

The first thing to do is to prepare carefully a diagram on cardboard, such as we are about to describe. (The

small numbers are merely for reference in describing it and should not be copied, but aside from those, the diagram should be exactly like the illustration except for size, which must be of the dimensions named.) From line 1 to line 13 must be exactly 6½ inches, and the intermediate space is divided into twelve equal parts, each part being very slightly over half an inch—to be exact, 13/24 of an inch. The card is about 2¼ inches deep, and lines numbered 1, 3, 5, 6, 8, 10, 12 and 13 are prolonged to the bottom of the card. Lines 1 and 13 are marked with a cross to indicate the keynote when in use.

How to Use Your Chart

Place the card so as to stand upright on the keyboard, resting in the little space which you will notice just behind the ends of the black keys. It will stand there without interfering with the action of the keys, and may be slid right or left as occasion requires. (Of course the card should not be too thick.)

Passing by the key of C, which, being all white keys, is too obvious and simple to need any help, let us begin by placing the card so that the lines marked with an "X" will each run down to a D flat. In this position it will be found that the lines, taken in order, indicate correctly the notes of the scale of D flat major—signature five flats. Let the pupil pick out the scale of this key, both up and down, by observing where the lines point. Now move it along about half an inch, and the key will be changed to D major—signature two sharps. Practice this in the same way. By repeatedly moving along the card the whole twelve keys will be indicated in turn. (In those scales which begin with white keys, the lines will not point exactly to the *center* of every white key and a slight readjustment may be necessary, but this never has been found to be a source of confusion if explained to the pupil. If any one line which is supposed to point to a *black* key, points properly to the center of the same, the other lines will be found pointing correctly.)

Teaching Fingering and Notation of Scales

It is a maxim of good pedagogy, almost without exception, to teach the *thing* before the *name,* the *name* before the *sign.* Proceeding on this principle, it is entirely practicable and proper to use this chart with beginners, even before they have met with the use of flats and sharps in notation. The earlier the hand and ear become accustomed to the notes of the various scales the easier will be the future work of both teacher and pupil. Do not attempt too elaborate explanations at first, but let the pupil learn by doing. Later on he may be shown how to *write* for himself the scales which he has learned practically by use of the chart. Having learned to write them by the use of sharps and flats written where necessary for separate notes, an explanation of key-signatures comes next in order, and will be much more easily and thoroughly understood.

The reader will no doubt notice that nothing has been said as yet in regard to scale *fingering.* The best plan is to let the pupil at first (but not for more than a week or two) use whatever fingering he may happen upon, clumsy and incorrect though it may be. As soon, however, as he has become accustomed to picking out the proper notes, explain to him that a way of fingering, much superior for smoothness and speed, has been devised by pianists, and that he will find it of great advantage to learn it. The scales, beginning with a white key (in the right hand), have the fingering 1, 2, 3, 1, 2, 3, 4, 5 (except the scale of F); but those scales beginning with a black key begin with such a will cause the thumb to be used on white

Of course, at this time it will be proper whatever system of technic in the movements playing the teacher deems best. The mor tendency, and perhaps the best one, is to allow a certain degree of play right and left, in minimize the amount of turning under the thu older way, which is now nearly obsolete, wa the hand perfectly straight and stick the th under, far enough to reach its place, when g instance) from E to F with the right hand in t scale of C.

Other Useful Charts

The chart just described is by far the most and useful with beginners, but the writer has f fit in the use of several others based on it in the same manner with slightly more advan The general dimensions and appearance of t charts are like that just described, but the drawn in different places. Using the same nu reference, we may prepare charts as follows

Harmonic Minor Scale: 1, 3, 4, 6, 8, 9, 12

(The melodic minor scale is less convenien kind of practice, being different up and dow

Whole Tone Scale: 1, 3, 5, 7, 9, 11, 13. some modern French composers.)

Major Triad: 1, 5, 8, 13.

Minor Triad: 1, 4, 8, 13.

Dominant Seventh Chord: 1, 5, 8, 11, 13

Diminished Seventh Chord: 1, 4, 7, 10, 13.

Augmented Triad: 1, 5, 9, 13.

The five last-named should be practiced bot notes (broken chords) and as solid chords. extending two octaves instead of one is pr may be easily prepared by following out this sa

"I think we are in for a revolution in the cert artist field. Somehow we have lost si mission of concert artists. In the old days had to bring something startlingly new to before he ventured on the platform, but we gotten this mission in commercializing our ar anybody and everybody give recitals, and has become sated with mediocrity. Given a tween the ordinary concert and the theatre, majority choose the theatre, and I am one And it seems to me that all the present ills cert stage have grown out of one great mis and that is, that it is possible to be great in uninspired about life."—LEOPOLD GO

Accuracy First

By Sidney Bushell

PUPILS should be cautioned to "go slow" when breaking in a new piece. Special attention must be given to correct fingering right at the start. However slowly the piece is gone over over the first few times, if correct fingering is used it will mean gain of time in the end.

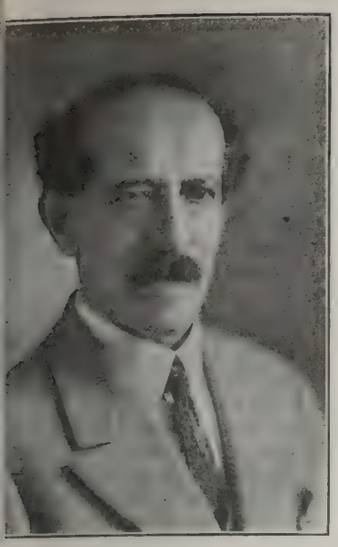
Early errors in the playing of the new piece have a way of establishing themselves as habits which are difficult to eradicate. How often have you heard a pupil making the same mistake in a piece, over and over again, in spite of the fact that all the rest may be almost perfect as regards execution. More than likely this error is a "habit" mistake, established when first trying the piece through. If time had been taken to get the fingering right, no matter how slowly, this irritating blunder would have been avoided and accurate execution established right at the start—which, happily enough also has a way of becoming habitual.

Another important thing to remember is, if occasional mistakes occur during the actual practicing of a piece, not to make a hurried correction of the sing'e chord in which the mistake occurs, and then go on. This only lays the foundation for future trouble. It is far better to stop altogether and re-play the whole phrase in which the blunder has occurred, since it is quite probable that the error was due to mis-fingering in a previous run of chord, although the correct keys may have been struck up to the time when the obvious dissonance called a halt.

Attention and Getting

By Ily Carpenter

GETTING along in music study depe much the pupil grasps and retains sions that enter the mind. He may done and hear notes that cannot be r two minutes. These things are not r because, they have had no real at pupil may listen to a piece of mus retain a note of the whole thing, if t has not been engaged.



Memory of sounds, as well as of of the physical execution of music, d the conscious effort—in other words tion and concentration—put into pupil should be made to realize th repeated efforts, and with persisten is perfection attained. Many imagine given them poor memories; when ciency is wholly due to lack o attention.

There is one sure way. Let th focused exclusively on the piece th studied. Let nothing else enter to tention. True, this is hard to do. possible, that is enough! Try, an again. If the mind begins to wa aloud each note as it is executed. them in the mind, until concentratio

Allow the attention to wander, wander even more. Practice mental tion, and soon it will be found to be so hard as it might have been thoug

Practical Points For Practical Teachers

By GEORGE LIEBLING

George Liebling, the eminent concert pianist, composer and teacher, was born in Berlin on January 22, 1865. He received his training as a pianist from Theodore and Franz Kullak and later from Liszt. His first Berlin concert, in 1884, was very successful; and he became Court pianist to the Duke of Coburg in 1890. He has been very successful as a teacher in Berlin, London and Munich, and during the last two years he has been engaged in concertizing and teaching in America.

NE USUALLY begins teaching at an early stage of life, at a time when either studies have just been finished n when they still are in progress. ılly he who becomes a pedagog build up a position, a career for e that will give him the means of g his living. I don't want to speak f many of those who have the wrong on or illusion, while still studying, ome great concert artists and, after- being disillusioned, are bitterly dis- ted and take up teaching with the g: "As it has come to the worst, I ill give lessons."

) very great musicians, Liszt and stein, both told me when I was a youngster: "We all have to teach ay, sooner or later; so it is just as o begin early in life to get some ence as a teacher and to study teach-

own conviction is that a very extra- ry teacher is born as such; but, as ence, art, and other lines, the ex- ıs are always rare, we would better er the average of teachers.

Necessary Qualities

HAT THEN are the absolutely necessary qualities for a successful r? Let us go into this question in de- The successful one has to know most points which lead to an assured posi- being recognized as such. We must at the bottom and not at the top. it is needful to try to get as early sible a pupil and—before, during and the lesson—study—yes, study this his needs and his wants, his gifts is shortcomings, his intelligence and ck of musical intelligence, even his ity.

every pupil is a born musician; on ntrary, most are not. During that irst lesson try to find out what he to understand, and what he is not. to him in plain language. Don't ıy superior way of talking to him; use many foreign expressions; don't cited or irritated about his inability llow your explanations which are upon using musical signs and words ounds for many years; don't empty hole bottle of medicine in one gulp. him sugar-coated pills; be kind and erate towards him; treat him with e good manners you possess; make eel comfortable, so that he would o come again for the next lesson; our personality in being polite, re- amiable. Fascinate him, and think e time of him as being your "little r or your little sister." These "don'ts" are more important than erhaps think.

The Older Pupils

EN IF you have a pupil that is uch older than you are yourself, er him all the time as one that needs your help in understanding to learn some new things which you must *explain* to him, which you must *play* to him, and most important, which you show him *how* to *practice*. It is not enough to say to the pupil, "Go home and practice." It is, as in most things in life, the *"How to do it."* The question is, "Do you really know, yourself, how to practice?" I am afraid that many do not. And why? Because your own teachers never told you about it. Now then, begin at once, in the next lesson you give, to divide the time into two distinct periods. Half of the lesson, let the pupil play his pieces; the other half, actually *"practice with him."* Try to help him with your own experience to use the precious minutes of practicing in concentrating upon the first four measures of the study or piece he is to learn. Let him sing or whistle the melody first; tell him the peculiar swing or strain of that melody; make him acquainted with the rhythm by knocking with your hand, your closed fist, that rhythm. Let him then imitate with his own hand that rhythm. Get all his attention first on the right hand's melody. Let him repeat and repeat those four measures ten times; and prove to him that repetition is the means of promoting memory, technic, better understanding and "love of the thing." Yes, this is the point, the pupil ought to be taught *"to love to practice,"* as the teacher ought to be taught to give his instruction *with enthusiasm* of his profession, with the most necessary love of the thing, and not only for the (necessary) remuneration, for mere money.

Experience has guaranteed that the same amount of seriousness, of love, of enthusiasm, you put into your work, be it in concert playing or be it in teaching, that same amount you will get in return from your audience or from your pupils! *Prepare the lessons* by practicing the somewhat difficult pieces yourself, thinking out some methods of "how to practice them for the pupil." The same way as you *economize time* in practicing; that same way use with the pupil. Suppose the pupil has a very small hand, a narrow stretch; you must prepare, invent a suitable fingering for his special case, and you must arrange the chords, the position of them, by some alteration, but do not change the upper notes in the right hand nor the lowest note in the left hand (the bass).

Beginners' Problem

THERE EXISTS a certain nervous feeling, not only in the teacher but also in the pupil, especially when both are *beginners*. With the teacher it is the lack of experience, quickness of thought and mind, the uncertainty as to his doings, that are the real cause of it (lack of authority!). With the pupil it is the natural shyness, the respect for the teacher, or the fear he has, for not having practiced sufficiently, and knowing he'll get some scolding.

My advice to the teacher is: "Work up all the authority of which you may be able. If you prepare your lessons as above and concentrate beforehand on what you are going to do in different but individual ways with your pupils, you will surely give a better lesson than otherwise; hence your feeling of authority will develop and grow. Once you feel it, once you are sure of it, the pupils will have to feel it too. Work in sympathy with your pupils; be their friend, their helper, their revered ideal, they look upon; and you will find the lessons a mutual pleasure, a growing success, and an assured "check for the future."

Cultivate Authority

YOUR AUTHORITY, once you have acquired it fully, will be your greatest help in getting more pupils, in satisfying them and their parents more and more, and in spreading your name and fame as a successful teacher. Try to behave and to look authoritative, but base it on knowledge. Some little advice may follow here. Taking a new study and a new piece, try hard to interest the pupil in them. Tell him something about the title, especially if the title lends itself to imagination; for instance, anything like "Butterfly," "The Cradle," "The Cuckoo," "The Clock" or for rhythm, such dances as the Waltz, March and so on. If the composer is one of the great masters, tell the pupil a few words about his life, his works, the period of his life, his triumphs and his hardships. In telling these items, it not only shows your own knowledge and authority but also awakens in your pupils some interest in you and in the lessons you give to them; in fact, it helps to endear you to them. You will find that the pupil loves these "Intermezzi," taking them as a welcome pause; and, between us, it is a welcome pause to the teacher himself between many lessons a day, as if he would "just take a breath."

The Interesting Lesson

MAKE YOUR lessons interesting! Don't let them pass on in a dry way. Avoid getting tired and *don't tire your pupil.* Use here and there a pleasing little sentence or a word of praise, of encouragement. Don't let the pupil feel your eventual disappointment with the lack of his musical intelligence. We are apt to make great mistakes about this point. You must develop your own judgment better in regard to the aspirations and expectations of your pupils —and of their parents. Don't forget that every child's parents think it is a "genius." Now as concerning genius; such a man as Mascagni, when being for years a pupil at the Royal Conservatory of Music in Bologna, I believe, was dismissed one day as "a lazy, untalented fellow;" and it happened that this same man composed some years afterwards his opera "Cavalleria Rusticana" and achieved one of the greatest popular successes a composer ever has had. This is one of many examples. How many singers of fame are "born musicians," or are what we call "a genius?" But on the other hand, I wish to state with full conviction that comparatively few people are absolutely unmusical. One easily makes a mistake in calling people unmusical, because of their not playing an instrument nor singing at all, nor enjoying good serious, classical or romantic music. Wrong; absolute wrong! Study that question and you will find that the taste of those people is either not yet developed or that they can not express their feeling for some kind of music or that they had not much chance to hear real music. Hence we must not make the mistake of saying to our pupils, "You are not musical," or, "You will never learn to play this piece decently." On the contrary, *always do encourage them* and show them how to do it, how to make the piece sound lovely, how such a performance gives pleasure to everybody who listens to it, also what joy and satisfaction it gives to the persin himself who plays or sings it.

The Repertoire Class

ANOTHER ADVICE: If you have besides a class some single private pupils, have them come once a week or once a month to play to each other like in a class. This gives them encouragement and helps to overcome their shyness. A little lecture given by you, will be beneficial. At these informal meetings you can observe and study your pupils better than during the lessons. Get in touch with them and talk like a friend to them. This will help matters altogether. Play one nice piece to them. Have eventually their parents or relatives come to be present. They will talk about that "lecture" in town and that, too, will be good for you. You will keep in practice by preparing yourself for these meetings a piece of some importance. Why not have a bigger affair like that every three months when some prizes, pieces or books of music or musical pictures may be given to the best two or three players (or singers), an impartial jury having been invited will present the prizes? You could try to get a paragraph into your local papers.

Use of Memory

YOU WILL BE often asked to have a pupil to *play* (or *sing*) *from memory*. The fashion nowadays demands performing from memory. Many of the youngsters have a natural gift, helped by a musical ear, to imitate the melodic strain and the rhythm after hearing the piece once or twice. Others can do it by studying it a short time. You as the teacher, have to invent some methods for those pupils who apparently can not remember one measure even but have the ambition to learn the piece from memory. Considering that repetition is the best method to learn anything in any subject, try to take one measure and explain its melody and its rhythm. Repeat the melody several times; sing it; let the pupil sing it, and have that done during the lesson a few times. Ask the pupil to do that at home every day until the next lesson, especially before going to bed. The pupil then may repeat in his mind the notes, with closed eyes. Observe how that works. Once the pupil remembers one measure, it will be easier for him to learn the next from memory. Repetition of the two measures prepares the way for three and four of them. I recommend very much the way of learning anything "with closed eyes," even in studying difficult passages, runs, scales, jerks and jumps. This is one of my methods I employ in studying or repeating pieces. It also is a good remedy against nervous feeling and prepares one for playing or singing and "fighting the fear," be it to play before the teacher or before some friends or in public. Some people, by this silly stage fright, get cold fingers and are unable to play; singers get that feeling in their throats. It is said that even an artist of renown like Paderewski suffers from cold fingers, and the greatest singers seem to be hoarse in the first few

minutes they are on the opera or concert stage. What is to be done? The only remedy that exists seems to me the following:

Prepare your program months and months before the ordeal. Repeat it and repeat it hundreds of times. Take a perfect rest between these repetitions. Play (or sing) it often to people, and, last but not least, use concentration and auto-suggestion to get a quiet mind about it.

The Quiet Life

LIVE ALSO a quiet life during that time and go early to bed. Avoid irritating and exciting company and read a good book here and there. *You don't know how very much these last lines will benefit you.* It is very well to say, "Oh, I have done that anyhow, all my life." I presume and venture to say, "No, you haven't." You think you have. If you had, your nerves would not feel so scattered. Think if even a Napoleon would have doubted every time he had a big battle to fight; what of victory? He actually saw his victory in his mind, before his closed eyes! I am absolutely sure of this. This is the secret of all the successes of all people in this world, great or little as they were.

Do not forget that! Every business man derives his success from this secret. *You have it in your own hands to be or to become a successful teacher or performer.* Read these lines over and over again and follow their advice. Even if you do not agree with every point, think it over before it is rejected. Remember that this writing is based on my own experience with thousands of pupils of nearly every nationality; and that it is the result of observing and studying their personality, their gifts, or the lack of their musical (inborn) talent, their ambition, their energy, or their laziness, their unwillingness towards music lessons, that stubborn behavior against their teachers who wanted to help them. Your duty is to overcome all obstacles and hindrances and to keep up your courage. *Remember, you have a mission to fulfill, namely to spread the divine art of music with the best of your abilities, into the hearts and souls of our wonderful young race and nation, and to make America more and more musical.*

Self Test Questions on Mr. Liebling's Article

1. What are some necessary qualifications of a successful teacher?

2. How shall we help the pupil with a small hand?

3. How shall the beginning teacher avoid a nervous feeling?

4. What are some ways of making the lesson interesting?

5. How does the "Quiet Life" help?

What Had She Lost?

By Hope Stoddard

"I WONDER when I stopped caring for music!" This in a slightly petulant voice from Marjorie after returning from the concert. Four years at college had given her a way of speaking that her mother had learned to sigh over silently. "I was simply bored! Not that the music annoyed me: I minded it no more than hearing the man shovelling coal in the cellar. But to think of sitting for two solid hours with nothing to do!"

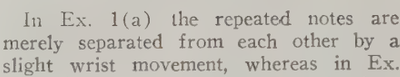
"Perhaps, Dear, you haven't been going to concerts lately."

Marjorie reflected that she had not been inside a concert hall before that day for four years. "So busy, you know!" She tried to pass it off. But somewhere beneath even her indifference there nestled a vague fear that she had lost something, a delight, a jewel, that, for all polishing, could never be reset in its original lustre.

Getting the "Hang" of the Rhythm

By Lucille Pratt Gunter

RHYTHM is the balancing of musical notes according to regular beats. The emphasis usually comes at the beginning of every measure though it may not be noticeably in evidence here. However, if there is not accent, balance is lost and the succession of tones ceases to be musical. Rhythm keeps the playing orderly and gives a feeling of surety, ease and command.



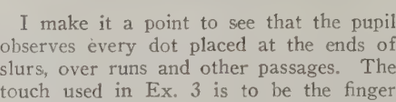
To attain rhythm the student must practice slowly—very slowly, getting every note exactly in its place by counting aloud in small fractions, and practicing separately the irregular passages. He must have perfect inner rhythm first. When this is mastered he can count in larger fractions, but slowly, until perfect control of beat is gained. If he persists until this freedom is felt, he will be surprised to know that he can practically double up on his tempo with no great effort, depending, of course, upon the advancement of his technic. This slow work, and the use of the metronome in obstinate cases, helps toward acquiring the outline or balance rhythm. The first beat of every measure is generally the important or accented beat. With this as a basis the student must group musical phrases, study and classify them, find the climax, develop a feeling of time that he can carry through the piece, study the variations of tempo indicated, and bind his thoughts rhythmically and logically together. If he does something definite at each step, he will get the same result at each rendition. This is real study that, in its development of definite balancing rhythm, makes playing dependable and gives it poise.

Various Ways of Writing Dots and Their Corresponding Touches

By Olga C. Moore

PUPILS, as a rule, do not articulate clearly enough the interpretation of dots used in music.

Ex. 1



In Ex. 1(a) the repeated notes are merely separated from each other by a slight wrist movement, whereas in Ex. 1(b) the same notes with dots over them are staccato and are played with a crisp, short, wrist touch.

Ex. 2

In Ex. 2 the slur and dots indicate a portamento touch. (A sobbing touch, I call it.) The tone is carried almost to the next, releasing the first chord with a little reluctant "sob," before striking the second chord. A quick catch of the breath, representing a sob, at the same time that the chord is released, will give one the idea of the effect to be produced. Release the second chord in the same manner. But the last chord, at the end of the slur, is the most staccato of all coming off very short.

Ex. 3

I make it a point to see that the pupil observes every dot placed at the ends of slurs, over runs and other passages. The touch used in Ex. 3 is to be the finger elastic touch. It is made with a crisp snap of the tip of the finger, flexing the second joint. The hand springs off at the same time. By playing crescendo to the close of this short phrase, bringing the finger off with a decisive snap, the finger tip is decidedly strengthened. The second phrase is taken off with the same elastic finger touch, though not so loud a tone.

By observing the various kinds of staccato, well placed accents and shape in the construction of groups of notes (in threes or fours, whether they are triplets or parts of counts), and the shading, I cannot see why a pupil's practice should ever become monotonous. I point these out, when assigning the study or piece, and ask about them at the next lesson. The pupil soon learns to look for them also.

The Rightly Learned Piece

By N. L

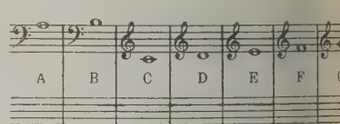
THE great thing is to begin young. Train a child from the start to play everything—scales, exercises, studies, pieces—without the music. It is because children have been allowed to use their music that they become nervous and fearful of forgetting when called upon to play without it. They may know the piece quite well but a bad habit has been formed; they are accustomed to glance at the music when they wish, and they have grown to believe it a necessity.

If a piece is learned properly no effort need be made to memorize it. If one sets out to master the difficulties the piece fixes itself automatically in the mind, photographs itself on the brain. The student will see the notes mentally before him and will turn each page as he comes to it. There are those who find it easier to memorize by the position of the notes on the keyboard. The great thing is to be sure. For those who do not remember easily the only way is to learn the piece bar by bar as a bit of poetry is learned line by line. To be able to "recite" a piece of music away from the piano, naming each note as it occurs, is an unfailing test of memory.

I do not believe in the drama of love, of romance, of passion, for the theatre. I regard such things, when handled on the legitimate stage, as time wasted and energy misapplied. For the drama of love, of romance, and of passion is the domain of music-drama, and a greater intensity of effect can be produced by even a second-rate musician (with all the tremendous resources of orchestra and voices at his disposal) than can be attempted by any dramatist whatsoever.—HUBERT GRIFFITH.

Learning the Keyboard

By Robert M. Crooks



SOME pupils find the learning of the k board a very difficult task while others it the easiest part of the rudiments. Te ers are often in despair when a pupil "A," "G;" and no matter how often pupil is admonished he will persist in ing the same error. Again, many begin get out of position by playing the t space C in place of middle C and *versa.*

An excellent plan to overcome this is to get some Bristol board and cu just a little narrower than a piano Have at least twenty-nine of these card range from second added line "C" clef below staff to second added line above staff, treble clef. Plainly mark letters upon the cards and above the le make a section of the staff with clef and note which is to fall upon that responding with the letter. When twenty-nine are done, add nine more— for the four notes above and inclu middle "C," bass clef; and four for four notes below middle "C" treble These latter cards naturally will c some of the original ones but they g show there are two readings for t notes.

After the cards are completed, tell pupil to place them at random upon allotted spaces in as accurate and rap way as possible.

The cards may serve for different p and if the teacher is not handy with pen, he has at hand much old disca music from which he can cut clef s notes and staves; and uniform letters a newspaper or magazine will serve letters. These clippings may be paste the cards. This procedure necessi some tedious work but it will be w the time and trouble on account of its bility and permanence.

Illustration of a section:

This method has been used successfully, even with pupils who not taught that each note upon the pri page had its allotted key on the keyb It was found that youngsters consider very fascinating game and older pupils sider it a sort of puzzle.

How Words Help

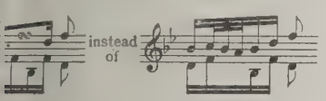
THE MODERN publisher has made it e for the teacher by providing nume little pieces with words, often of slight poetic merit, but the inge teacher can apply this idea to very man the little exercises and studies that child has to work through. If for stance, instead of identifying the little and three line exercises that are four every preparatory book as Nos. 22 an page 40, they are given titles, they wi studied with much more pleasure; incidentally, the child's imagination be stimulated.

"The Birdie's Song," "The Rus Stream," "Chick-a-dee," are obvious n that speak for themselves. In "The Kittens" the hands play alternate scale runs. "Picking Clover Leaves" l left hand triplet bass. "The Ro Dance" sounds rather an unlikely title little eight year old insisted that the n suggested robins hopping about! Fi "The Acrobat" is the entirely satisfa name given to a little study that has a grace notes, a couple of measures w the hands cross, and ends with an u pected leap of two octaves!

Beethoven's Piano Sonatas and How to Play Them

Part II

Expressly Written for THE ETUDE by the Eminent English Musical Educator



PROFESSOR FREDERICK CORDER

of the Royal Academy of Music, London

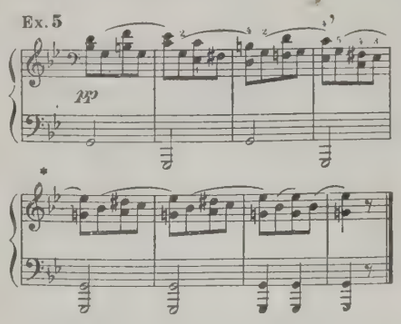
onata No. 19; Op. 49, No. 1

OSE WHO have been accustomed o believe that the mysterious abbre- viation "Op." means something will why the three Sonatas labeled "Op. ld be so difficult and advanced in d the two now before us so simple . The explanation is that these lat- really quite early works, dug out lished in 1805. "Op. 49" means no an "Lot 49" in an auction sale cata-

two works, being intended for rade players, demand an order of tary different from those we have cently considering. For instance, inner needs constant reminding of seless and misleading methods of grace-notes and ornaments. It is ult to bear in mind that an ornament n the beat, when it is printed be- 14 and 15). A turn, represented by ventional sign ∾, would be all very ere it always played uniformly; en we get it in combination with vention of the *dot*, how bewildering the eye to see it written

rse are those cases where *tr.* over has to be interpreted according to umstances in which it occurs. For e:

played



ginner always tries to make a trill ith the note he sees before him, but e how incorrect that is: he would ged to play 3 or 5 notes in the trill. rmer is too few and the latter too Observe also that the trills have no f small notes indicating turns. performer, if not a good timeist, is to get confused at 44 where after measures of 32nd notes (demi-semi- s) it suddenly reverts to 16th notes quavers). The remedy is to count n a measure and listen to the left At 50 I would advise taking the F♯'s with the left hand,

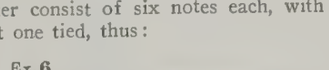
serve the legato, at least during the wo beats.

l the left hand has the chief melody, right hand must act as accompanist ep very quiet until 75, where it takes nd again. At 98 and 100, if the is too great for the hand, the note (G) can be omitted without ent to the music. In the last 8 res I should disregard the slurs, which ant only for *legato* marks. Granted that the whole wants to be smooth, the phrasing and fingering of the right-hand part should be like this:

Ex. 5

(*Should be bass, not treble cleff.)

These should be properly called "Sonatinas," as each consists of only two fairly short movements, the second in each case being in Rondo form.



The Rondo of this G-minor Sonata is in the Tonic major, a not unusual feature in compositions in minor keys. It is very straightforward and only demands care to play the opening section at such a pace that the portion in G-minor will not have to lag perceptibly in order to get its sixteenth notes into something that will pass for the same time.

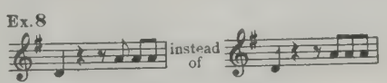
Sonata 20, in G-Major, Op. 49, No. 2

THIS is a gayer, more amiable piece than the preceding, also more within the grasp of small hands. We need give scant attention to the time indication, which is 𝔠 when it certainly ought to be C. Play it, counting four quarter-notes in a measure and at a speed indicated by the direction given, *Allegro ma non troppo*—gaily, but not too much so.

The diversity of note-lengths in the opening measures renders the steady counting of time a necessity. The trills in 4 and 8, being in the midst of descending phrases, had better consist of six notes each, with the first one tied, thus:

Ex. 6

and the turn in measure 12 should be

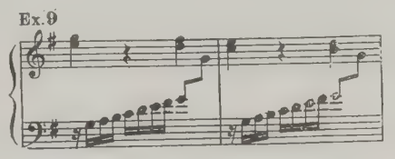


Ex. 7

These are quite normal, but pupils, unhelped by what they see before them, are constantly at a loss.

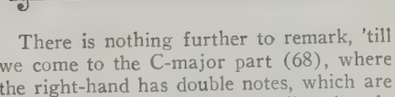
The next trouble is that the player, after five measures of easy cantering, triplets (15-19) is suddenly pulled up and has to resume normal eighth-notes (21). This can be correctly achieved by resuming the counting at 19. The three eight-notes in 20 should have been printed

Ex. 8



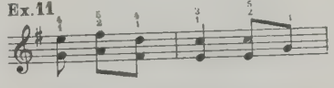
which renders them liable to be mistaken for a triplet.

These three eighth-notes, wherever they occur, should always be played with changing fingers, generally "3, 2, 1." The long slurs marked over 36-44 are superfluous, as indeed are most of the slurs in the piece. *Count your time at 53.* That means begin counting at 51. The golden rule for time-counting is this: (being specially needed at a change of note-value) start counting about a measure before the change takes place. At such places as 49-51 your fingers can hardly fail to keep time, and you can scarcely fail to be conscious of the "one, two, three, four" quarter-notes. Thus there can be little trouble with 52. But 53 has a tied half-note, which may throw you out unless you have the swing of measures 51-52 clearly in your mind. Mark the four quarter-notes of 53 steadily and the change to ordinary eighth-notes in the next measure will not upset you. Throughout the remainder of the movement the same changes and difficulties recur, so that I need offer you no further advice, unless it be to mark in a *p*, which is clearly wanting to 112 and 115, also an *f* at 113.



The second movement, a tuneful Minuet, which Beethoven thought well enough of to use the main theme again in his Septet (a work you are hardly likely to have heard) is in Rondo form; that is, there are three occurrences of the main theme with two episodes between. Here again you need to watch carefully those places where the note-values change, such as 8, and 19-20. It is curious that beginners are very apt to get upset over changing from quicker to slower notes, as in the last beats of 21 and 22. These two measures are, for this reason, and others, best played

Ex. 9

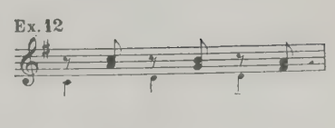


The five short groups of right-hand notes at 28 and 29 should all be fingered 4, 3, 2; 4, 3, 2; as they are similar this will keep the phrasing right. So at 37 the three pairs of eighth-notes must be fingered as such, and the repeated notes on no account played with the same finger. The triplets at 40 will need a slight modification of this.

Ex. 10

There is nothing further to remark, 'till we come to the C-major part (68), where the right-hand has double notes, which are trying for small hands, especially when in sixths. Nevertheless, these should be fingered

Ex. 11



if possible, for the sake of smoothness, pushing the thumb from F to E without raising it. It will sound very "choppy" if the hand be raised anywhere here, it being a melodic phrase.

I think that the detached chords in 80-83 sound better if all three notes be played by the left hand, giving the right hand an eighth rest on the second beat of each measure.

The only other thing to point out is the "catchy" rhythm of 114, which is best learned by playing the measure once or twice with the two sixteenth-notes simultaneously, that is,

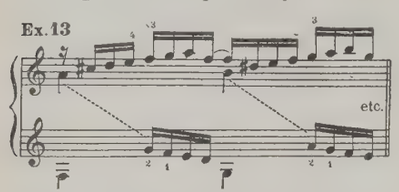
Ex. 12

This movement, by itself, makes a very nice, quite easy piece for beginners.

Sonata No. 21, Op. 53, in C-Major, Dedicated to Count Waldstein

WE NOW return to the series of "great" sonatas, the present being one of those pieces that every one calling him (or her) self a pianist cannot afford to pass by. It cannot fail to be observed that the element of instrumental effect—apart from mere difficulty—had been at first regarded by Beethoven as a matter of secondary importance; and although the last movement of the "Moonlight Sonata," and the greater portion of the "Op. 31," and others, leave nothing to be desired in the matter of technical brilliancy, this is far from being generally the leading feature. What makes the "Op. 53" such a general favorite with performers is its extremely pianistic character, combined with its general musical charm. The person attempting this difficult work might be supposed capable of finding out all the troublesome points for himself; but there are some that I have found to be unnoticed by so many advanced players that I think it as well to point them out.

For instance, there is no *rall* in the twelfth measure. The pause on the G is no particular climax; and, anyway, Beethoven did not desire a *rall*, or he would have marked one. The next thing is to remember to top the *cresc.* in 21 and 22 with a sudden *p*. This is an important point which I find often gets overlooked. Of course, you will perceive that the whole of the second subject and the approach to it, appearing to bristle with accidentals, is simply in the key of four sharps, and a change of key-signature was urgently demanded, but to give it would have been against a tradition, which Beethoven lacked the courage to violate until later. When playing the second subject observe one point: The melody (35-41) is played through first with the two hands alike in octaves. See that they sound evenly, because the right hand fingers its part with several fingers, getting (it is to be hoped) a good *legato*, but the left has to play most of its notes by sliding the thumb. The second time (43-48) the left hand has the same part as before (the second half an octave lower), but the right hand has a varied version in triplet eighths. Its thumb notes are only part of the accompanying harmony *and must be carefully subdued.* I hope you will see that in the 47th measure, the principal melody is the third note of each triplet. There are several sudden *pianos* to look out for; one at 63, where the left hand must not get *crescendo*, and two others in 83 and 85. People are very apt to play, in 82 and 84, a *forte*, instead of a *crescendo*. The repeat of this first part used—until about 25 years ago—always to be made, but you rarely hear it now.



In the second part endeavor to keep the various *crescendos* where they are marked and not start them too soon. From 114 to 141 is a steady and persistent *forte*, only broken by two odd *pianos*, in 138 and 140. Do not be perplexed at the queer notation of the bass broken chords. Beethoven

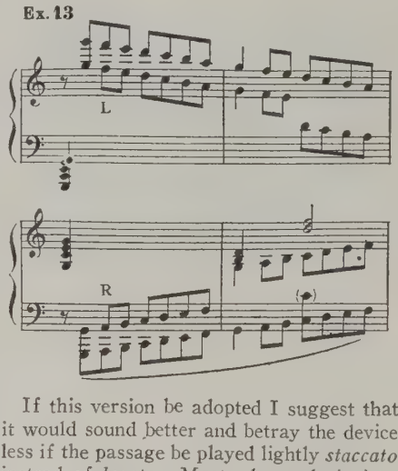
was still afraid to trust to the sustaining power of the pedal, so thought it necessary to indicate his intentions in this unnecessarily cumberous fashion. Hoard up your powers of *crescendo* during the long, dominant passage, 144-157, for what the left hand is capable of amounts to very little.

When you reach 169, I hope you will perceive the sense of my warning about the 12th measure. It would sound very dull to hear so much made of the two-fold pause. The second subject having been given in the unusual key of the mediant (E major) now reappears in the submediant (A major), but only for a few measures; then we hasten back to the tonic, where all goes as before until at 261 begins a *Coda,* gradually working up from *pp* to *ff*.

The left-hand passage, 274-276, is very troublesome with the fingering usually adopted for the four sixteenth-notes—"2, 3, 1, 2"—in consequence of there being so little time to turn the thumb under. I find "1, 2, 3, 4," a good deal better. There is plenty of time to slide the thumb from the preceding quarter-note; but if you find the stretch from 4 to 5 beyond you, the following is another possibility:

Ex. 13

The light scale-passages at 284-285 are best played, the first one very swiftly and legato, the second rather slower and staccato. To play either *glissando,* sounds vulgar. I suppose I need not warn you about the "catch" in the time at 293.



The second movement of this sonata, which only professes to be an introduction to the Rondo finale, is nevertheless a very grateful task for the performer. It can hardly be played too slowly, a very grave pace enhancing the air of dignity and mystery that enfolds it. Perhaps you are not aware that Beethoven originally composed a full-sized slow movement for this work, but finding it made the whole imprudently long, substituted this admirable Introduction and afterwards published the other as a piece by itself under the title, "Andante in F." The only thing in this *Adagio* to which I need direct your attention is the 2nd and 8th measures, where the octave E, in the bass, would have been an octave lower had the compass of the instrument permitted it. To bring the bass up a seventh, instead of letting it descend a semitone, as the bass of an augmented sixth should do, is not only poor harmony in itself, but it weakens the harmony of the following measure, where the skip of an octave would have been welcome.

The *crescendo* at 21 does not want to be overdone, nor do the various *sforzandos* in this movement. I have heard it played with the soft pedal throughout; this aids the mysterious effect, but was not indicated by the composer.

You should need no warning to keep the opening of the Rondo to a placid, moderate pace and a steady *pianissimo.* It is a voice heard in the distance, and though at 55, 168 and 337 we have it repeated loudly, as if taken up by a chorus, after each episode it recurs as softly as ever. The dynamics (light and shade) of this movement are indeed as eccentric as Beethoven ever was. At 163, and similar places, do not allow the right hand to hustle the left hand into playing too fast; and at 251 I should not allow old-fashioned rules of fingering to hamper me, but finger the right-hand arpeggios all alike, starting with the thumb on the lowest note, whether it be white or black. At 287-95, the light quarter-notes in the left hand are to be played as if they were the missing sixteenths of the right hand. Afterwards they gradually assume an independent interest, becoming by degrees the subject itself.

The Coda, marked *Prestissimo,* is just about twice as fast as the Rondo. When you get to 415, you find that the passage is inverted; that is, the hands have changed over their parts. The left hand should therefore be made much louder than the right, to render this apparent. From 427 onwards, are some eccentric changes of *p* and *f*, and then we reach the famous octave passage, which is the bugbear of all pianists. It was originally marked *glissando,* but this is hardly possible on the modern piano. In Klindworth's edition, the octaves are played by the two hands, except at 468 and 472, where this relief is not possible.

Ex. 13

If this version be adopted I suggest that it would sound better and betray the device less if the passage be played lightly *staccato* instead of *legato.* Most advanced pianists, however, who have learned the art of playing octaves with a loose wrist and close to the keys, play the passage as written, even if they have to go a shade slower; but then again they cannot make it sound *legato.* For my own part, taking into consideration the small interest of the passage, and also the fact that Beethoven himself abandons the octaves at 475, just when the passage is assuming importance, I think it far better, if you cannot do the *glissando,* to play single notes only—the t in the treble and the lower notes If it be executed really *pia* marked, the difference can ha tected, and a good crescendo at it seem quite natural. The trill lows commences on G, unlike t succeed; these all accent the acc as was usual. The culminating is best played:

Ex. 14

the trills having become, during 507-510, of the pace of ordina notes. The pace is fully mainta end.

Any Sonata that came immedi this great work would be felt t nature of an anti-climax, wh merits; and so Beethoven seem felt with regard to his next effor in F, in two movements. It seems least inspired of his writings, subject-matter, and difficult in th with little to reward the player fo tions. It is one of a very f pianists have concurred in pas and there is so little in it that assistance at our present stage th we may well turn to another.

Self-Test Questions on Mr. Cord

(1.) *What is the meaning o and how is it applied to a comp*

(2.) *What is a Sonatina?*

(3.) *What is the form of t in Beethoven's Opus 49, No. 2?*

(4.) *To whom is his Sonata, in C major dedicated?*

The Third in this Helpful Series of Articles Will Appear in the July Issue

A Musical Biographical Catechism

Tiny Life Stories of Great Masters

By Mary M. Schmitz

Johannes Brahms
(1833-1897)

[EDITOR'S NOTE.—*We are presenting herewith a monthly series of biographies designed to be used by themselves, or as a supplement to work in classes and clubs, with such texts as "The Child's Own Book of Great Musicians" series and "The Standard History of Music." For venience of "Etude" readers this series is now being issued in boo Several additional articles will appear later.*]

1. Q. Where and when was Johannes Brahms born?

A. In Hamburg, Germany, on May 7, 1833.

2. Q. Did he come of a musical family?

A. Yes; his father was an able musician who played the viola, violin, 'cello, flute, horn and contra-bass. He played the double-bass in the theater and in the Philharmonic concerts, and also played in the town military band.

3. Q. Who were Brahms' first teachers?

A. When Brahms was seven years old he began studying with the pianist Cossel. When he was ten years old Cossel, realizing the boy's great talent, took him to play for Marxsen, at Altona, who accepted him as his pupil in music without compensation, and also looked after his regular school work.

4. Q. With what great Hungarian violinist did Brahms go upon a concert tour in 1853?

A. Eduard Remenyi.

5. Q. Where did Brahms obtain the melodies of his Hungarian Dances?

A. From a poor Hungarian musician who played some of his national Hungarian music, which Brahms and Remenyi took down in notes, and the melodies of which Brahms afterward used in his Hungarian Dances.

6. Q. What three great musicians did Brahms meet at this time?

A. The violinist Joachim, Liszt and Schumann. Schumann was so impressed by Brahms' great talent in composition that he wrote a now famous article entitled "New Paths," in which he praised highly Brahms' work.

7. Q. Was Brahms as great a pianist as Liszt, Rubinstein or Paderewski?

A. No; his playing is described as hard and dry and he did not fill his audiences with enthusiasm as did the three others named. But Joachim said of his playing, "His piano playing was so tender, so full of fancy, so free, so fiery, that it held me enthralled."

8. Q. How was Brahms considered as a teacher of the piano?

A. Florence May, in her book, "Life of Johannes Brahms," says, "Brahms was an ideal teacher of the pianoforte; strict and absolute, gentle, patient and encouraging, and unwearied in his efforts to make his pupil grasp the full meaning of whatever work might be in hand."

9. Q. Who was Brahms' great contemporary, and how do their compositions differ?

A. Richard Wagner, whose compositions represent the ultra-romanticists in orchestral music, while Brahms is the champion of the classic idea in absolute music.

10. Q. Describe Brahms' style in composition.

A. Brahms' style is not bright and tuneful as in the South German masters. It is broad and gloomy, generally intricate in harmony, sometimes dull and unattractive. He was an undoubted master of form and was great in original inventive power.

11. Q. Describe Brahms' style in writing for the piano.

A. "Brahms' style," says a writer, "is usually the free polyphonic, more open than Schumann's. The rhythm is complex and difficult to solve. He has a great fondness for syncopations, cross rhythms, and sudden metrical changes. His music is very difficult to play."

12. Q. Was Brahms a fine song writer?

A. Yes; Brahms wrote about two hundred songs with piano accompaniment. Sixty are in folk-so Brahms' songs, like Schumann's, give about portance to the voice and piano part. The a ments are very rich; and many of his songs h dies of haunting sweetness. His style is always and noble. Brahms' songs for four or six vo companied are among the finest ever written.

13. Q. What is Brahms' most famous work?

A. The "German Requiem" for chorus and It is not a requiem mass, but a cantata with wo the Bible, setting forth the brevity of life and of immortality.

14. Q. Did Brahms write much chamber mu

A. Yes; he wrote string quartets, piano tr tets and quintets, and a clarinet quintet, all revive the classical style in a manner worthy Mozart and Beethoven.

15. Q. How many symphonies did Brahms

A. Brahms wrote four symphonies. They are the style of Beethoven's fifth and seventh sym

16. Q. Describe Brahms' personal appearanc

A. Brahms had a body small and stocky, su by a head abnormally large. His complexion w his eyes blue and penetrating and his hair slig in his advanced years. He was rather carele dress, often appearing on the street without a t kind and carrying his broad-brimmed hat in his stead of wearing it on his head.

17. Q. When did Brahms die?

A. In Vienna, April 3, 1897.

The Adult Beginner and His Problems

By JOHN M. WILLIAMS

RLY every teacher of pianoforte, l there are some two hundred usand or more in these United ours, has at one time or another the problem of the adult begin- to handle it to the greatest ad- one of the points to which every her should give time and thought, res thorough preparation and an of method strangely absent in c teaching.

erm "adult beginner," the writer denote all beginners in piano- ng who are past the age of four- s will include boys and girls of ol age, school teachers, steno- lerks, married women, college men, the budding vocalist who play her accompaniments, and, tic of all, the woman past middle as always craved music lessons, when a child, was unable to have ther through lack of money, a music teacher.

Beginners Difficult to Teach

it is generally admitted that in y of cases these older beginners, reasons, are a "thorn in the flesh" assed teacher. First, the hand is rmed and is generally stiff and he boys and men frequently have look as though every finger had ne or another been knocked out a base ball or some other instru- manly sport. The older women have hands that show honorable, mewhat disheartening signs of ers have rheumatic joints that queak when they try for finger

ter's experience with such pupils ver a period of a quarter of a vith varying results. For the n years, the outcome was nearly same. After a short period of ying in length from one month to pupil would invariably either write or announce, "My work" ice, home, social affairs, or what- ase might be) "is getting so heavy afraid I shall have to drop my sons." A polite way of saying acher had failed to meet the prob-

hin the past ten years this state has changed completely: the of many of these older beginners met and solved. The writer is to hold these pupils, often for rs, to the mutual pleasure and both teacher and pupil.

is the financial return from this ority to be despised, as adult be- equently are able to take as their riod, hours that the average nds difficult even to give away, he forenoon, late in the evening arly in the morning.

Beginners a Different Problem

ematics, if we have a problem to must get busy and "work it out." l never think of simply shrugging lers and waiting for it to solve our common sense would tell us uld remain unsolved. Yet many f pianoforte seem to adopt the itude where the adult beginner playing is concerned. The adult s a problem separate and distinct of the child beginner, and one be worked out along quite differ- To use the same beginner's book sed for a child of six, to ap- e subject from the same angle as idered for other pupils, is to be ful.

Adult Beginner has a Definite Objective

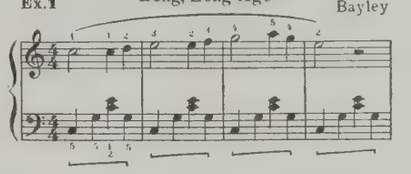
I believe most teachers will admit that the average older beginner starts on his musical career with a quite definite idea of what he wants to learn to play, not with some vague notion as to its "cultural value."

What are these desires?

First, he desires to play tunes that he knows, that he has heard and is perhaps able to whistle or sing. What these tunes are the movies, the home, the radio, the phonograph and the church will have to answer.

Racial Music

As the Italian loves his operatic arias, so the Anglo-Saxon loves his folk tunes. Practically all Americans have an inheritance not only of our own folk tunes like *Way Down Upon the Swanee River,* but also English, Scotch, Irish and Welsh, to say nothing of quite a few German airs.



Let us us now look at the problem in hand, take stock of assets, liabilities and possibilities.

First, considering assets, the desire to play is undoubtedly the biggest. As before said, older beginners generally begin taking lessons because they want to play, not, as is frequently the case with children, because their parents make them take music lessons. Frequently they earn the money for their lessons, and people who earn their lesson money are very apt to try and get their money's worth. The mind of the adult beginner is another asset, as it can grasp the intellectual part of the music lesson much quicker than the untrained intelligence of a young child. Names of keys, names of notes and their values, time signature, and so forth, are easily learned and comprehended by them. They can think music; their problem is to be able to play what they think.

The physique of older beginners has its advantages as well as disadvantages. Greatly to their advantage is the fact that they can reach the pedals, and the hand, being stronger and larger, is generally capable of spanning an octave.

Now, as to liabilities, the hands of many older beginners (especially the football and baseball players, older married women, and so forth), are frequently stiff and unwieldy. As the fingers seem to hinge at the elbow instead of the knuckles, speed is taboo. Fast pieces, requiring pure finger action, are generally absolutely out of the question. The music teacher should realize this and give pieces in slow tempo, generally a tune or melody in one hand with accompaniment in the other, like the following:

Ex.1 Long, Long Ago Bayley

Another drawback is the fact that boys and girls who work generally practice at night, frequently when they are very tired from the day's labor. Hence the quality of the practice suffers. Of course, any sort of social diversion, from company dropping in to going to a "movie," upsets the practice schedule, and leaves less time to prepare for the next lesson. Again, the older beginner is frequently a young man or woman who is away from home, and systematic practice on a boarding house piano is not always feasible.

Next, as to possibilities (knowing the Biblical injunction, perhaps probabilities would be a better word), first, let us see what the older beginners desire, and what the chances are for achieving it.

JOHN M. WILLIAMS

Of course, there are the pupils who do exceptional work. The writer once had a young pupil who began taking lessons when he was sixteen years of age, having never had a lesson in his life previously. Two years and seven months later he passed the advanced examination of the "Associated Board of the Royal College and Royal Academy of Music." But, since such cases are so rare, we will confine our remarks to the average older beginner.

Boys and girls of from fourteen to twenty-five generally take piano lessons for one of several reasons: To play "jazz" at parties, to provide their share in the evening's entertainment, or having begun to take singing lessons, to play their own accompaniments. To play in an orchestra, school or "movie," is also sometimes given as a reason.

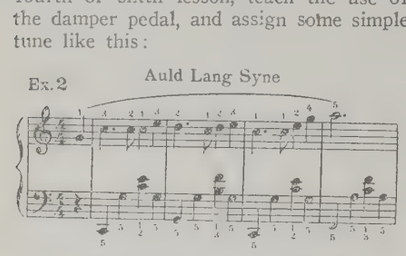
Older Beginners

Beginners from twenty-five to sixty (the writer has had many beginners between the ages of fifty and sixty, one of whom showed unusual ability) generally want to play rather slow, sentimental types of pieces—frequently hymns and nearly always the old folk songs like *Long, Long Ago, Annie Laurie, Old Black Joe, Way Down Upon the Swanee River,* and so forth. The older beginner who is to be married and desires music for the future home, the young lady whose fiancé sings and who is ambitious to play his accompaniments, and the expectant mother who is studying with the purely altruistic idea of "pre-natal influence," these are other isolated instances.

What are their chances of having these ambitions realized, and how may the music teacher assist to best advantage? I believe most of the above ambitions, except perhaps the one to play "jazz," which is frequently very difficult, may be easily and happily realized, providing the pupil gets the right teacher and that teacher uses the right kind of material.

The average music teacher is too much inclined to teach all pupils alike. The problems of the adult beginner and the child beginner are exactly opposite, and the sooner the teacher recognizes this fact the better. A child's fingers will generally do whatever he can think. Not so with the older beginner. The successful teacher of adults will frequently have to throw overboard a great many "traditions," the "dead wood" in the mental attic. For instance, the relative importance of scale, arpeggio and chord practice must be reconsidered. If the teacher uses discrimination, he will not assign pieces which depend upon scales for their charm. In fact, he will fight shy of any sort of pure finger work in the very beginning. Chords and arpeggios are much more necessary and quite feasible, and the correct use of the damper pedal from practically the very beginning (about the sixth lesson) is of paramount importance.

The Chinese Pupil



Let us first see how the school teacher handles the problem of the adult beginner. A Chinese boy of about sixteen years of age, who had been in this country but two years, was placed in the fifth grade at public school. On account of his speaking very indistinct English, a question was raised regarding the advantages of this step. The answer was: "In public school we recognize the fact that the mind of the older beginner must be kept interested, hence, just as soon as we have taught the

*The musical illustrations in this article are from John M. Williams' *Older Beginners' Book,* recently published by Theo. Presser.

sounds of letters, and a few simple words and sentences, we try to place them in a grade far enough along to stimulate them mentally. In a very short time they make up the parts they have skipped. We recognize the fact that the mind must be kept at work."

The same idea should be applied to the older beginner in music. Just as soon as possible, frequently by the end of the fourth or sixth lesson, teach the use of the damper pedal, and assign some simple tune like this:

Ex.2 Auld Lang Syne

Popular Music Not Always Trash

Two difficulties are presented in the case of the boy or girl from fourteen to sixteen, who wants to learn to play "popular music," generally meaning "jazz." First, "popular music" is rather an elastic term that may be made to include such classics as Dvorak's *Humoresque,* Offenbach's *Barcarolle,* from "Love Tales of Hoffman," Rubinstein's *Melody in F,* Schumann's *Traumerei,* and many others. Secondly, much of the popular "jazz" is quite difficult. As generally used this type of music denotes popular songs, musical comedy hits, the latest ballads and dance music in general. Even in "jazz" there is good and bad. Some of the popular numbers are well written and original, but these are frequently beyond the average pupil's ability.

Just how far a teacher should go to meet the desires of the pupil in this matter is a subject every teacher will have to decide for himself. The writer has never felt that his reputation was sufficiently good to risk actually teaching "jazz" and ragtime. The teacher may explain to the pupil that he doesn't teach so-called "popular music," but that if he desires it, the quickest and best way to get it is to go ahead and learn the notes, fingering, and so forth, in the regulation way, as they are the same in all music.

Musical appreciation is not a fixed quality; on the contrary it is extremely variable and is capable of growth the same as any other form of appreciation. Hence, the pupil who begins with the idea of playing "jazz," frequently ends with the desire for better music.

First Book Important

Care should be taken in selecting the first instruction book. The average beginner's book is necessarily, and quite correctly of course, written with the child of six, seven, or eight years of age in mind. Physically, mentally, and frequently musically, their problems are diametrically opposed to those of the older beginner. *Dolly's Waltz, Teddy Bear Dance,* and so forth, do little to stimulate the interest of the older beginner, and even the older beginner must have his interest kept up. The following outline of the first six lessons for one of these older beginners has proven helpful.

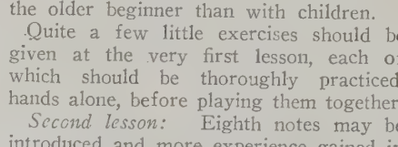
The First Lesson

First lesson: Explain the keyboard, the notes representing these keys, their values, time signature, bars, measures, fingering, and give a thorough explanation of the reason for relaxation, such as: "The eye reads the note and repeats it to the brain which telegraphs it down the nerves to the finger tips where the note is played. Think of the arm as being a piece of hose hanging loosely from the shoulder. Any stiffness in the wrist, elbow or shoulder compares to a 'kink' in the hose and makes it difficult for the 'message' to get through to the fingers; cuts off the current, as it were." Older beginners need constant watching for tension, especially in the shoulders and elbows.

Teach Arm Touch First

Many teachers insist upon the pupil mastering the pure finger touch before using the arm weight. Yet why begin piano playing with the most difficult touch? Why not begin with the larger (arm) movement and gradually work down to the more difficult finger touch? Many excellent and progressive teachers advocate starting even small children with the arm touch (weight) and when freedom has been acquired gradually introducing pure finger action. With the older beginner, the latter method is imperative. Beauty of touch and any degree of facility attainable is dependent upon freedom of the piano playing apparatus, the shoulders, upper arms, forearm, wrist and so forth. Even more attention will have to be paid to this important phase of relaxation with the older beginner than with children.

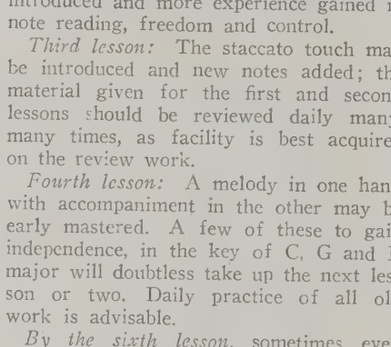
Quite a few little exercises should be given at the very first lesson, each of which should be thoroughly practiced, hands alone, before playing them together.



Second lesson: Eighth notes may be introduced and more experience gained in note reading, freedom and control.

Third lesson: The staccato touch may be introduced and new notes added; the material given for the first and second lessons should be reviewed daily many, many times, as facility is best acquired on the review work.

Fourth lesson: A melody in one hand with accompaniment in the other may be early mastered. A few of these to gain independence, in the key of C, G and F major will doubtless take up the next lesson or two. Daily practice of all old work is advisable.

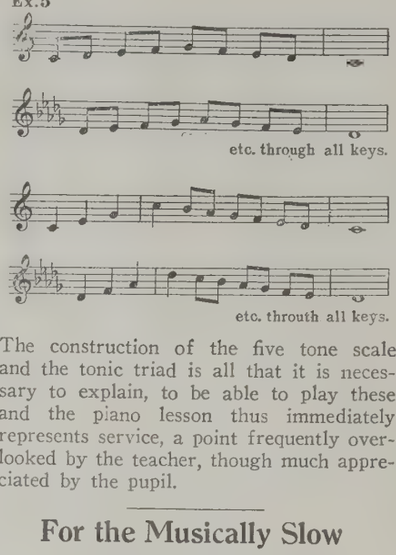


By the sixth lesson, sometimes even sooner, the pupil may be shown the use of the damper pedal and taught the C basses, using the foot (pedal) to connect, thus:

Ex.3

Then a few minutes spent on the right hand alone will teach the following melody, (*Long, Long Ago*):

Ex.4



Next play the hands together or at first the teacher may play the melody and the pupil the accompaniment, and then *vice versa.* All this work is arm work and requires little or no finger agility. From now on try and use as many folk tunes as possible. Gradually introduce finger action scales and so forth. A thorough knowledge of tonic, dominant and subdominant chords in three positions, and the common chord arpeggios, is of more practical use than the scales, although of course it is taken for granted, each teacher will give these.

The Vocal Student

Of course, every teacher met with the vocal student who, discovering after the age of twenty that he has a voice, wants to learn to play as well as possible. Such a student, who is unable to play piano at all, may very well be given the following little exercises at the very first lesson:

Ex.5

The construction of the five tone scale and the tonic triad is all that it is necessary to explain, to be able to play these and the piano lesson thus immediately represents service, a point frequently overlooked by the teacher, though much appreciated by the pupil.

For the Musically Slow

Eutoka Hellier Nickelsen

These hints are intended for those who have no natural musical ability but who love the art and are eager to play the piano.

1. Select a patient, though thorough, instructor.
2. When natural talent is absent, try imitation.
3. Know how to apply
   a. Touch by weight.
   b. Touch by stroke.
   c. Touch by pressure.
4. Scales played very lightly and rapidly will help to soften a harsh touch.
5. Arpeggios played with a decided accent, up and down the keyboard, will help to brighten the tone color.
6. Five-finger exercises, practiced staccato, will give that desired crispness to the touch.
7. A few lessons in syncopation will improve the rhythmical flow.
8. Know your glossary.
9. Know your rhetoric (musically speaking).
10. If desiring to teach, specialize in theory.

Selecting Compositions for Your Pupils

By Patricia Rayburn

In selecting a composition for a pupil, four things must be taken into consideration: the age of the pupil, his state of advancement, his intelligence, and character.

Each pupil is a problem to be solved on the basis of these four points.

The best test to apply to a musical composition—taking it for granted that only a work of merit is to be considered—is to be able to answer these questions affimatively:

1. Is the student really interested in this type of composition?
2. Is it within range of the pupil's ability, from the standpoint of technic?
3. Is it within range of his ability from the standpoint of interpretation? Is his mind sufficiently developed to get the utmost from the selection?
4. Is this composition sufficiently difficult for the student? Will it keep him stretching forward and upward to greater achievement?

When these questions has been answered satisfactorily, after sufficient thought on each, then it is time to introduce the pupil and the new selection to each other for serious work.

Cyril Scott and H

In "My Years of Indisc Scott discusses the inflation admiration in childhood resul fact that he began to play ear at one and a half years led a neighbor to prophesy: my words, that child will be cian."

"Though I have turned ou I hardly feel justified in call *great* one," remarks the Engl naively. "It is not exactly which I suffer, but a sense neither take myself nor my great seriousness; and, I that reason have caused a goo appointment, especially to American women . . . .

"This capacity to treat m grain of humor, however, me after my twenty-fourth young boy, a youth, and a took myself and my works ulous seriousness. The Practical Etudes

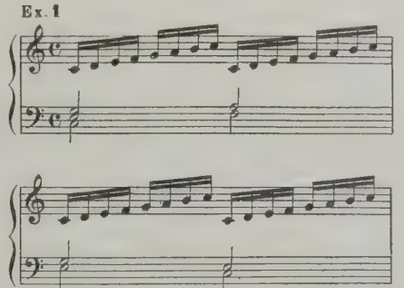
er, it is not to these transcen-r grand Études in Paganini style that we wish to turn our atten-to the more usual and common-s; to that class which deals en-h the development of the physico-element in piano playing; to that table to the third or fourth-year here the names of such teachers posers as, Berens, Bertini, Cle-erny, Cramer, Duvernoy, Doering, Köhler and Loeschhorn appear as l words. Nevertheless, the num-ese studies is so prodigious that rly impossible for any student to e entirety during his studentship. his aim, rather, to study a part of roughly.



should be studied until they go long. Nor should they be dis-soon as the reading is easy, for his degree of proficiency that they reatest amount of good. More-hey are continued, they will prove s of constantly increasing value. impracticable for all to be com-astered by any one (unless he de-self exclusively to the task), the urpose of each should be sought d culling-out and careful selection the most valuable ones, utilizing e which are absolutely needed.

The curriculum of the years preceding the advent of the aforementioned Études may well comprise the instruction book, or two or three volumes of some graded courses interspersed with a few of the simple Études by Doering, Gurlitt, Köhler, and easy sonatinas, such as Clementi, Opus, 36—1, 2, 3. These may be worked in easily if the practice or lesson period is divided as follows: (1) Technicalities; simple scales, chords and arpeggii. (2) Selections from the graded course, easy Études exhibiting the material of the technical exercises, sonatinas, or any instructive pieces partaking of a classic character. (Louis Köhler states that this classical work should be begun as soon as one is capable of playing five successive tones or the scale of C in one octave firmly and distinctly, at a speed of two tones to a second of time. But it may be undertaken earlier, when one is able to perform sixty or less notes to the minute, say M. M. fifty up to sixty.) (3) Simple pieces by modern composers. Such an arrangement of the practice period is sufficiently varied and brief to prevent either physical or mental fatigue. It is at this point in one's musical education, beginning the third year, that the subject of Études seems to intrude insidiously, yet forcefully for at this stage the student begins to "feel his wings" and wish to test his strength.

The Final Drilling Ground

It is evident that to get the best results from an Étude it must be viewed as a means for the application of technic, or at least the final drilling ground for such physiological actions, and not as many seem to think, a mere course in discipline whose aim is to gain the highest degree of speed or power. The usefulness of the Étude is manifold and its highest purpose to be an advocator or trainer in the acquisition of physical adroitness, or proficiency in piano playing. All performances demand such acquisitions as strength, surety, speed, lightness, looseness and touch. So it is with these ideals of technic in mind that we set ourselves to the task of Étude practice. The following simple excerpt from Köhler, Opus 50, an opus dealing entirely with scales and arpeggii equally distributed between both hands, should be thoroughly practiced until mastered.

Ex. 1

First: practice for strength. This is to be secured through strong, even practice, each note delivered with the same degree of power, yet so slowly performed that one may view each sixteenth-note of the scale run as if it were a quarter-note, that is, four beats to the time allotted to each quarter-note. In this method of practice never allow the metronome to exceed eighty, one tick for each sixteenth-note.

Observe carefully the curve of the fingers, avoiding all wrong or backward manipulations of the joints, and keep the arm and hands in correct position which they assume naturally if allowed to swing freely and loosely. Irrespective of strength and finger action, the player gains by this slow method calmness and control of his nerves. Having ample time to make a careful survey of all details, even those natural ones, such as beat divisions and places of accentuation, he attains a mental poise devoid of anxiety for correct finger or note. Besides he has time to observe all marks of expression and change in melody outline. In fact, this slow work becomes a sort of concentrated visual training of music conceptions and calls into activity successive factors: the eye, observing notes, signs, and so forth; and the brain, absorbing the impressions and adapting them in turn to the manipulation of the fingers, wrist and arm. It was William James, I think, who said, "The discipline of mastering *one* fact at a time, the drilling in mental concentration and retention, is worth far more than the facts themselves. Facts are forgotten, but the mental ability remains."

Second: speed and lightness may be used advantageously in combination if the Étude is played as softly and evenly as possible with each note distinctly heard at *tempo commodo*, that is, at a speed wherein no mistakes will occur. It is better to employ no metronome in endeavoring to obtain smoothness and speed with this light touch.

Third: surety and looseness may be gained simultaneously through a staccato touch (with thorough looseness or relaxation of wrist and arm) given to the sixteenth-notes only, each note to coincide with a tick of the metronome. A medium degree of intensity should be used on each note, and the fingers kept correctly curved at all times. The value of the staccato touch as a test for the accuracy of notes or correct fingering cannot be over-estimated. Many performers can play a passage legato, without any trouble, but if the same passage (even if only a simple scale run) is undertaken staccato, they will discover to their astonishment that false notes are frequently struck and that wrong fingering is nothing unusual.

Touch and Etude-Practice

Fourth: touch embraces the acme of Étude-practice, as it means the application of all of the above principles of technic with the addition of expression. Every note, every motive, every section, every phrase, every accent, must be studied and delivered with perfect control and musical feeling. In order to do this, the student must listen to his own playing, must become his own critic. All the time he is solving the mechanical problems on the keyboard, mentally he must be improving his musical ear by cultivating those faculties which discriminate between what is beautiful, artistic, and effective, and that which is ugly, trivial, and weak. Often even a simple melody requires many repetitions and hard work to render it effectively and to its best advantage. "Repetition is the mother of study," we are told, and resultful practice is intelligent repetition, which means repetition with mental guidance and control back of it.

If a critic would listen to another play, he would be "all attention" to detect wrong notes, incorrect phrasing, poor pedaling, irregular rhythm, inartistic expression, and especially indefiniteness of form. With just such keenness should he listen to himself, and not waste, as he so often does, many hours, yea, even years, in desultory, unintelligent practice. Every student should so focus his efforts and direct his mentality during practice that he will gain some definite result. He should make difficult passages flow as fluently as the simple ones and see that the rendition of the whole is smooth, connected and acceptable.

There are certain laws concerning the metric accent, the rhythmic accents of the beats and their sub-divisions, and the phrasal accents, which should be understood and developed by the student. Each one of these various accents demands special consideration. Practically nothing is superior, for sustaining the rhythmic flow of all these accents, to an Étude with regular divisions of equal notes to which different shadings may be given, and which is capable of varied phrasings. We have studies composed with specific objectives, such as, cultivating a feeling for rhythm and melody, staccato and legato touch, bravura and octave playing; Études for figures and embellishments frequently occurring in music, as scales, broken chords, arpeggii, double notes, trills, turns; studies designed especially for the development of the fingers, the wrist, the left hand alone, and so on. Selections from these Études may be used when one is deficient in any particular phase of development. Among the numerous Études existing, the following are considered as essentials for all students:

Essential Etudes

Czerny, Op. 299, School of Velocity.

Heller, Op. 45, 46, 47, Development of rhythm and tone quality.

Cramer, Op. 84. The well-known technical studies, which no piano player should omit.

Cramer, 50 Selected Studies. Edited and progressively arranged with criticisms by H. von Bülow.

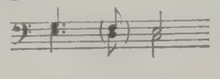
Clementi, Gradus ad Parnassum.

To these may be added advantageously:

Thalberg, Op. 26, 12 Grandes-Études.

Heller, Op. 154, 21 Technical Studies, to precede the works of Chopin.

There is a distinction to be made, resuming our general talk on Études, between the melody and accompaniment. Reverting to the short illustration quoted above from Köhler, Opus, 50, the melody (in this case in two-voice, or duet, form) is found to be in the bass, which calls for a legato touch and at the same time gives a prominence to this part over that of the scale run for the right hand. Furthermore, the second measure of this melodic bass progression



Ex 2

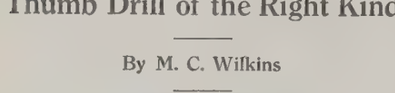
demands a certain adaptation of the fingers to produce an effective legato connection, thus: Ex. 3

That is, the thumb sustains the G of the first chord while the third finger is raised in order to resound the E with the second chord. This method of connecting chords produces a perfect legato between the upper notes, while the lower notes are necessarily somewhat disconnected; yet, notwithstanding this slight disconnection, a general rule stands that, "if one part is connected and an accompanying part is separated, even by a rest, the result remains as if the whole were connected." The final effect on the ear stands as follows: Ex. 4

because in any leap all intervening tones of the familiarized scale are supplied imaginatively by the musical ear. This may be tested by skipping slowly on the keyboard from G to C above, and noting if the intervening notes A and B of the scale are not mentally interposed.

Again, there is the expression of climaxes inherent in each phrase, to which an interpretative touch must be adapted (as the bass part in the first excerpt given) and a similar, yet subdued, expression of the accompanying figure. This figure frequently bears an inherent expression of its own resulting in "expression within expression." Thus, crescendo, diminuendo or swell may be made upon the scale runs in the treble of the first example, nevertheless sustaining the *smorzando* effect of the entire accompaniment.

Many students deem the study of Études uninteresting, yet they should always keep in view the ultimate aim of thus surmounting technical difficulties, and endeavoring to vitalize them with the breath of musical interest.



Thumb Drill of the Right Kind

By M. C. Wilkins

HERE is a thumb drill that can be used to preface scale-playing to good advantage. As the thumb is rarely used on a black key in scale-playing, the practice may be confined to the broken thirds in C major as indicated.

Ex. 1

For passing thumb under.

Follow this counting for precision:

Count I. Strike the second finger and at the same moment let the thumb fly under to its proper position over the E, the next key to be struck. These motions are to occur simultaneously and are *not* to be accompanied by any jerky motion of the hand.

Count II. Strike the E confidently with the thumb, at the same moment liberating the second finger and placing it in striking position immediately over D, the next note.

Proceed in the same manner with the other fingers, and the other notes in all the exercises.

Please Do!

By N. B. Smart

ACQUIRE a true *legato* by finger exercising.

Practice the difficult parts first in studies and exercises.

Get the fingering right in your scales.

Play scales slowly until you know them.

Give attention to phrasing.

Play more slowly if you blunder or stammer.

Avoid stopping in sight-reading.

Keep your eye at least a bar in front of the notes your fingers are playing.

Leave the new piece till after you have practiced scales exercises and pieces.

Remember that one piece well played is of more value than many pieces indifferently played.

Understand fully the key, or keys of a piece.

Conquer the difficult piece and make it speak your thoughts.

Finish your practice with one piece from your repertoire.

Play to friends when asked.

Slumps!

By Harold Mynning

A GREAT deal of the discouraging element in piano playing could be eliminated if the student would realize that he is just as much subject to a slump—a period when he seems to be able to make little or no progress—as is, for instance, a baseball player. No one can explain why the mind sometimes seems to go on a vacation and to stay indefinitely. The slump usually begins of a sudden and ends in the same way. Probably the cause is partly physical and partly mental.

As an illustration of the part the mind plays in a slump, this incident might be mentioned. Some time ago the celebrated pianist, Josef Hofmann, played in Atlanta, Georgia. He had not given a recital there in fifteen years. The small crowd assembled to hear him made him feel rather depressed; but he tells us that as soon as he touched the keys he discovered much to his joy that the piano was an instrument that had an exceptionally fine action. This changed his mental attitude entirely and the recital turned out to be a glorious success.

Piano playing is much like baseball, in that it is partly mental and partly physical. That is to say, while there is all the difference in the world between the two "games;" yet they have a great similarity in the two ways which have been mentioned. Very often the hands of the pianist seem to be sluggish, and no amount of practicing seems to be able to improve matters. The player is probably in the throes of a physical slump. As stated, baseball players frequently experience this. George Sisler, the famous batsman of the St. Louis Browns, in the season just closed appeared twenty-six times at bat without scoring a "hit."

For the genuine slump there is probably no cure as such. This leaves but one question left to be settled. Sometimes, in fact often, a streak of laziness is mistaken for a slump. The remedy for this of course is work, and plenty of it.

All that can be done in a case of slumps is that the victim shall do his best to break it. If the case is not too severe, probably any one or all of the following remedies might prove efficacious—at least partially so.

Practice slowly. There is probably nothing so absolutely ruinous to pianistic progress as the attempt to play a piece faster than preparation has made possible. The old saying that "The shortest way home is the longest way round," is perhaps true, as applied to slow development in piano playing.

A change in musical diet is often as exhilarating as a breath of fresh air coming into a hot, stuffy room.

Finally there is the recourse to quit music entirely for a period of time. This often works wonders in the nature of an improvement when the work is again taken up.

A Tribute of Tears

Harry Harkness Flagler, the generous patron of American music, told a story at a musicale in New York.

"A male quartet," he began, "was singing plantation melodies at a concert in Rochester. As the melodies went on a man in a front seat was seen to wipe his eyes furtively, and a few minutes later he burst into tears.

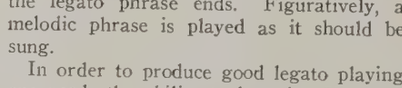
"The manager of the quartet slipped round and touched him on the shoulder.

"'My dear sir,' he said, 'our quartet deeply appreciates the compliment you have paid it by this display of emotion. You are a Southerner, no doubt?'

"'No,' sobbed the man, 'I am a musician.'"

Acquiring a True Legato Touch

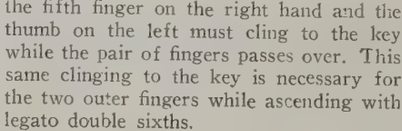
By Hazel Barron



THROUGHOUT early musical history the search for an instrument on which to exemplify the legato touch was constant. As the mechanism of the pianoforte was developed, each master in turn sought to play upon it in a truly masterly way. Each endeavored to acquire a way to produce beautiful singing tones, to express a true legato touch. Today we have the modern pianoforte, a highly developed instrument, and a host of master musicians to perform inspiringly upon it. But what about the playing of the average student and performer?

How frequently is heard: "Oh! she plays wonderfully, for she has a beautiful touch!" An abstract sort of compliment to offer a thoughtful musician, for, she reasons, "What *is* a beautiful touch?" Were it possible to inquire of the speaker, it would likely be found that he was expressing his appreciation for the tune which the player brought out. Melody played in singing style in a sympathetic manner is ever instrumental in enlisting the appreciation of an audience. Is the musician always as alert in the recognition of beautiful tones as his hearers? The difference between true legato playing and detached or staccato playing is as great as the difference between black and white. Therefore, a practical understanding of the various touches and the correct place of each in performance is the duty of every sincere student of music.

The clapping of the hands at regular intervals illustrates in a simple way the effect of the staccato touch. Though the claps be slow or rapid, each is separate and distinct. One neither meets nor overlaps the succeeding clap. So it may be said that any tone which does not meet the succeeding one could not be a link of a legato phrase, but must be a staccato tone. One naturally sings or hums a melody in legato style. The moment the breath is taken, the smooth succession of tones is broken and the legato phrase ends. Figuratively, a melodic phrase is played as it should be sung.



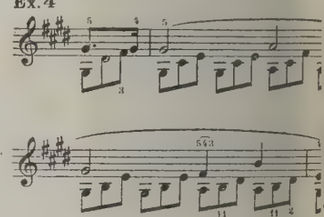
In order to produce good legato playing one needs the ability to hear it. He must then utilize his efforts to gain it by simple methods of practice. With a very relaxed hand and arm, the following exercise should be practiced to give an appreciation of singing tones and the effect of constant overlapping.

Ex. 1

Double thirds and double sixths are found very profitable practice. It should be noticed that in ascending a scale of thirds, the fifth finger on the right hand and the thumb on the left must cling to the key while the pair of fingers passes over. This same clinging to the key is necessary for the two outer fingers while ascending with legato double sixths.

Ex. 2

One immediately finds that in attempting to play a phrase in a beautiful legato style, he must first acquire a correct, practical fingering. It is only after a usual fingering has been learned that the student can work to perfect the technic required for the passage. The opening phrase of the popular *Impromptu*, Op. 142, No. 2, (Ex. 3), by Schubert, gives some splendid illustrations of the necessity for correct fingering. It will be found that in order out this beautiful melody as indic the slurs, the finger marking must lowed. It is excellent practice to melody from its harmonic context to bring out the simple, unaffect sage of this musical gem.



Ex. 3

Frequently several fingerings ar for the same passage, and the stude select one which meets all requir There are but two important rul legato passage, when a note is once, or several times, a change o should occur on each repetition. B ing the fingers a perfect smooth obtainable; for, as one finger all key to rise, another is in readiness it again, thus producing a continuou tion. When it is impossible to fingers because of other voices, t may act as a buffer by lifting with and with a suitable downward str place the finger on the repeated not earnest student readily learns tha laxed, flexible, alert wrist is very n for good legato playing. It fr happens that a wide span occurs notes of a given slur. In such a must plan to allow for the needed sion, by a change of fingers on a s note.

The necessity for rapid changes gering is shown in the illustratio the much-loved Beethoven work monly called "The Moonlight Sonat 4). It will be noted also that bec the triplet figure used to accompa melody, the wrist must do importa necting work.

Ex. 4

Although the false notion is ent by many that a true legato is ob only at the organ or by the huma the stringed instrumentalist will fi he also can approach a perfect le his playing. He must remember, h that though mechanical (technical) tion is very necessary, yet this is means to good performance.

The pianoforte student must b bring out a beautiful musical exp through the simple details of hi practice. Scales and arpeggios n given diligent and persevering Troublesome points must be carefu permanently eliminated. The four fifth fingers must work as free accurately as the second and third thumb must remain relaxed and pl a parallel stroke to that of the Three degrees of speed and three ness, at least, should be used for p for only through such application, student attain a proper sensitiven the requirements of sympathetic in tation of compositions.

How to Develop a School Band

By J. E. MADDY

J. E. MADDY

rom an address prepared for the Committee on Instrumental Affairs of the Music Supervisor's Na- Conference. Republished by arrangement with the National Bureau for the Advancement of Music. Maddy is the director of the Music Supervisor's Department of the Conservatory of the University of gan and is the author of important works for school use.

ERY school should have a band. t is both a school and a community sset. This fact is being recognized reater extent every year. "Music eryone and everyone for music" be the growing aim of every com- and the students' band represents the most practical and effective which the schools can help to real- ideal.

cal training through the band is in with the trend of the times, which ing greater emphasis than ever be- enjoyment of music and *self-ex- through ensemble playing.*

school band—the wind band—com- with the fine training it offers the players an important function in ting school spirit and unifying life, and beyond that, a great poten- reational and cultural service to the at large. It makes music a "live " to the entire school population. reflected among the parents in a understanding of the value of music educational scheme and a truer ap- ion of its rôle in the development individual and the improvement of life. With its cheering and inspir- usic, its picturesque uniforms and neral usefulness to the school and the band merits, and receives, the astic support of the student body public.

ddition to these advantages a band kly and easily developed and is a ttractive medium for musical ex- n. But its very usefulness and the f first development have somewhat l us to what it may, under wise ce, ultimately accomplish. For the s capable of a development similar symphony orchestra and in certain he music of the band is superior to ossible from an orchestra of any Sustained organ-like effects of ower and loveliness are possible as o other musical means, to state but the unique effects of which this f organization is capable.

Standard Bands

l instrumentation has never been dized, so there has never been an rganization toward which to strive. Any group of instruments is called a band and, until there is some settled standard to work for and grow up to, there will never be the development of the band there should be for this wonderfully attractive medium of musical expression. Military bands, jazz bands, combinations of bands and orchestras—there is no end to them. All these combinations are most attractive and useful, but they emphasize the fact that there is no standard. The Committee on Instrumental Affairs of the M. S. N. C. has tried to meet the need for a practical criterion by making known its judgment as to the best instrumentation for a minimum band of twenty-one players, and is working out instrumentation for others.

Band System

A system of bands is very necessary to accommodate everyone, if band music is to fulfill its true mission in the community. The wind side of the instrumental work must be greatly expanded if all the boys who should be tooting horns instead of idling or getting into mischief are to be kept busy, to state but one of the vital uses of the band.

A system of school bands, headed by a fine symphonic band, should be developed in every community. The wind instrument classes should be stressed in the lower grades and the band organized in the seventh grade.

It is better for each school building to have its own band rather than to have a central organization, as smaller organizations make for efficiency and the time it takes to go from one building to another is a deterrent factor. If held out of school time many pupils who should be in the band will be unable to attend rehearsals. A joint concert of several school bands often forms an attractive feature of a season's work.

Without balance the band is ineffective, and no one gets full value for the time spent on it. There are two ways to secure the necessary balance. The long distance plan is to raise the right number and kind of players. This takes a lot of time, but every band leader should begin this plan and keep it going all the time. Every community band should have a "kid band" to draw from, when there are no bands in the schools.

The short distance way means taking all the players available and getting as good a balance as possible at once. There are very few well balanced bands, because the leader is apt to work only on this later plan and neglect the former.

We will begin with the second and short way We must, of course, give every pupil a chance, but we must also see that every one takes advantage of the chance, so that all get the best out of the work.

Some standard must be in the mind of the leader as he gathers all the players into the band for the first time We will suppose this is a senior high school. We find further on in this article the list of instruments of the ideal symphonic band.

A band with this instrumentation can play any sort of music and should be the ideal in the mind of the leader. The membership in this band should ultimately be limited to the best players only, but at first there should be some concessions. The quickest way is to treat each part as a separate unit clear down the line. For example, suppose a number of saxophones present themselves. Needing one soprano saxophone, the best one should be selected and put in the band. The rest of the players of the soprano saxophones may take their choice, either change to some other instrument or go into the second band where all may play without regard to balance. Let it be known all through the high and grade schools that but one soprano saxophone can be used in the best band, toward which all are striving, and the beginners on saxophones will take warning and will begin to study something that will give them a chance to get into the best organization. This will give a fine start to both plans suggested above.

As another example, let us take the cornets. Many of these will apply, as next to the saxophone the cornet is the most popular instrument. The four best of these should be placed in the first band and the rest of them given their choice between going into the second band or changing to another instrument and going into the first. Let it also be known throughout all the system of bands that but four cornets can enter the first band and pupils contemplating cornet study will consider their chances and select the instrument to be played with more care than usual.

Supposing one of the disappointed cornet players decides to get a French horn. He should be put into the first band at once and the fact announced through the whole system that when a pupil takes up a new instrument he can rise clear to the top if there is no competition on his instrument. On the other hand, the more instruments of the same kind the keener the competition and the better player one must be to hold his place.

It may be thought that placing a green player in the best band will hurt the ensemble. It will for a time, but it is perfectly amazing how rapidly a youngster can learn anything when the proper incentive is given him. The new player will strive manfully to bring himself to the level of the rest of the band. At first he should not be allowed to play very much when the band appears in public, but he should always appear with them and play the few notes that he can play correctly.

All players on all instruments should understand that promotion depends upon ability, conduct and vacancies. Demotions depend on the same. With this double plan of organization, up and down, and "crossed," the competition will be keen and transfers from one instrument to another will seem logical and will be easily made. But let the leader always use tact.

To develop his band effectively the leader must have a definite sized and definitely balanced ensemble in mind to begin with and then stick to it until it becomes a definite reality. This takes time and he is often tempted to make concessions here and there, but this is generally fatal. Carrying out this plan may cause temporary hardship to a few, but the final result will fully compensate for any of these temporary difficulties, and there is always the second band with its unlimited membership.

This same plan should be worked in all junior high schools and eight grade buildings.

The membership in the upper band should be limited strictly as to number first and then quality.

It is a good plan to have an extra player on each part who rehearses with the first band, and stands ready to fill in when someone cannot be present. These extra players may or may not be members of the second band. They may play with the band in the "Tutti" passages and be ready to play the solo passages when necessary. It is well to look forward to graduation time and be training enough of these understudies to fill in the band when the time comes.

It should be remembered that the quality of the performance of this first band and all others also must be constantly perfected, for, if the ensemble does not grow musically the motive for joining it at all is lost, and the whole system is a failure.

Suitability of Instruments

Students often select an instrument which is unsuited to their physical make-up, and it is well for the leader to pass upon the selection and advise against choosing the wrong instrument.

Cornet players must have thin lips and even front teeth. Sharp or uneven teeth, or upper and lower not in alignment, would make playing painful in the extreme. Pupils with thick lips should be transferred to instruments with larger mouth pieces, such as altos, trombones, baritones or

HIGH SCHOOL BAND, ANN ARBOR, MICHIGAN

tubas, according to the thickness of the lips. All brass players need even front teeth. Reed instrument players must have even lower teeth. Oboe and bassoon players should have even upper and lower teeth. Good whistlers are the best material for flute and piccolo players.

Buying Instruments

How shall the instruments be acquired, who shall pay for them and what shall be purchased first?

The solo instruments will be purchased by the players without much urging, but the less well-known instruments must be furnished, such as the French horns, oboes, bassoons, tubas, and so forth.

The board of education should be asked to furnish these instruments as a part of the school equipment, the same as it does for other branches of study. This part of the music system may be considered vocational as well as cultural. Let us contrast the vocational equipment in the usual high school in the matter of machinery with that for music. Thousands for the one and usually nothing for the other. Now contrast the number who will use their vocational training in one and in the other. Music makes the superior showing. Many boards of education are furnishing funds to buy instruments.

Buying instruments is a fine outlet for the energies of parent-teacher associations. It is also a project which will make a strong appeal to chambers of commerce, Rotary, Kiwanis and Lions' clubs. In fact, local clubs of all kinds may be interested.

Philanthropically inclined people will here find a very concrete way to help. Many a talented pupil, if given an instrument and a few lessons, will later become self-supporting either wholly or in part.

Concerts of all kinds may be given and the proceeds used to buy instruments. This gives an added reason for studying the music, but it is a very slow way to raise money.

Vaudeville and minstrel shows, given by students, have value and are popular. Student organizations often help with this fund. Tag day also helps. Managers of picture theatres often allow organizations to take over a certain number of performances and share the profits accruing from the increased sale of tickets. Old paper sales are a goodly source of income.*

The value of these efforts is not only that they raise funds, which is, of course, the primary objective, but that they serve to keep students and public reminded of the importance of developing the band.

Care must be used in buying the instruments. They should all be "low-pitch." Nothing is so discouraging as trying to make music with instruments that cannot be tuned together.

Good instruments should also be purchased. They are far easier to play and the mortality by discouragement is far less.

Instrumentation

In planning the system of bands provision should be made for units of various sizes. This may not be possible at first but with some definite scheme in mind the results will finally be worth while.

Band for an Eight Grade Building (36 Pieces)

Twelve B flat clarinets. One E flat clarinet. One piccolo or flute. One alto saxophone. One tenor saxophone. One C melody saxophone (three may be used if separate music is provided for each one). One baritone saxophone. Six cornets. Three French horns, mellophones or E flat altos. Three trombones or two trombones and one tenor horn. One baritone. Two E flat tubas, small size upright. One bass drum. One snare drum (two may be used). One pair cymbals.

*One school raised $230 in three days by having the pupils cart old papers from their homes and dispose of them to a junk dealer.

Junior High School Band (54 Pieces)

Sixteen B flat clarinets. Two E flat clarinets. One piccolo. One Oboe, One bassoon. One alto saxophone. One tenor saxophone. One baritone saxophone. Three C melody saxophones, if separate music provided. (Do not allow them to play the oboe music.) Four cornets. Two trumpets. Four French horns, mellophones or E flat altos—or four French horns and four E flat altos or mellophones, one horn and one alto on each part (an excellent way to teach French horn). Three trombones. Two baritones. Four E flat tubas, small size, upright. One bass drum. Two snare-drums. One pair cymbals.

Symphonic Band (68 Pieces)

Two piccolos (interchangeable with flutes). Two E flat clarinets. Twenty-four B flat clarinets. Two alto clarinets. One bass clarinet. Two alto saxophones, or one soprano and one alto. One tenor saxophone. One baritone saxophone. One bass saxophone. Two oboes. One English horn. Two bassoons. Four cornets. Two trumpets. Two fluegel horns. Four French horns. Two baritones. Three trombones (two tenor and one bass). Six tubas (two E flat and four BB flat). Timpani. One snare drum. One bass drum. One pair cymbals.

Minimum Band of 21 Pieces

The National Instrumental Committee of the Music Supervisors' National Conference suggests the following instrumentation for a minimum band of twenty-one pieces:

Four clarinets. Two saxophones (baritone and tenor or alto). Four cornets. Three horns. One baritone. Three trombones. Two tubas. Two drums.

Thirty-Seven Piece Band

Twelve B flat clarinets (three first, three second, three third and three fourth). One E flat clarinet. One flute and piccolo. One oboe. One bassoon. Two saxophones (E flat alto and B flat tenor, or two C melodies. Or one alto clarinet and one B flat tenor or C saxophone).

One alto clarinet. One bass clarinet or bass saxophone. Four cornets. Two trumpets. One fluegel horn. Three French horns. Three trombones. One baritone. Three tubas (one E flat and two BB flat preferred). Two drums (bass and snare).

The Community Band

The community band would do well to take one of these suggested instrumentations and work toward it as their goal. When that is reached, it should work for the next one, until the community possesses a real symphonic band that can give the people concerts of all kinds. Many of the suggestions in this booklet apply to the community band, organized outside of the schools, and including Rotary Club, Boy Scout, American Legion bands, and so forth, as well as to the school ensembles.

The law in many states now allows a community to tax itself to support a band. Why not, therefore, buy any needed instruments which are lacking out of public funds, just as a fire engine is bought. A fine band may be made to put out many mental fires, resulting from restlessness and discontent, just as the fire engine puts out physical fires. It is also an invaluable constructive force, as a pleasure-and relaxation-bringing agency, in addition to being protective. Further information concerning state band laws may be secured from the National Bureau for the Advancement of Music, including a full résumé of these laws in the various states.

Seating of the Symphonic Band

The seating plan of the symphonic band shown on the next page may be used as a pattern for the seating of smaller bands. Just leave out the missing instruments and bring the remaining instruments closer together, keeping to the same general plan.

Credits

Credits should be given pupils who play in the band, if their work is worth it. If they merely play occasionally for the fun of it, they should receive no credit. Music should not be looked upon as a snap; the music credits that are given in the schools should be earned.

Attendance

The attendance should be taken by the librarian or other officer appointed. A seating plat with movable cards is the best way to do it. No time should ever be taken to call the roll, and certainly the leader should never do it. His time is fully occupied otherwise.

Rehearsal Time

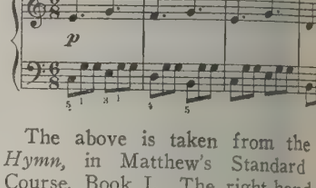
It is often a problem to induce school authorities to admit that music study is education and give school time for it. When this is admitted and there is a teacher available who can teach the band, the rest is but a matter of time, work and careful planning.

All bands should meet in school time where possible, have a specified number of periods weekly, and be an integral part of the school work†. When pupils are allowed to substitute music for other and less useful subjects the work will amount to something. More people earn their living by music than by any other profession, except school-teaching and one or two others, and when you include those who partly earn their living by music the number probably equals the number of school teachers. Most of these professional musicians earn money on the instrumental side, and the number is increasing every day. But this is only the vocational aspect of the question. When the educational, general cultural, ethical, and entertainment side of music are taken into account the thinking person will soon see that only a very useful subject indeed can hold its own with instrumental music in the schools.

One or two weekly rehearsals will suffice for the bands in the grades. The bands of the junior and senior high schools should meet every day for one period.

If the ensemble is efficiently organized an amazing amount of work can be accomplished in a one hour daily rehearsal. The best time for rehearsals is the middle of the day. A school can generally arrange a program that will permit daily rehearsals, if the principal is so inclined. Practically every high school has duplicate classes in some subjects. If every class that meets at the same time as the band has a duplicate at some other period the difficulty is solved. It is far better, as well as easier, to arrange to have a period every day than a double period two or three times a week, as the daily class always functions better than the intermittent class. After-school rehearsals are not usually so satisfactory, although they are often held in grade schools. It is obviously unfair to penalize music students with after-school classes when other vocational subjects are taught during school hours. The music profession is better paid than any of the other vocations taught in the schools. In the face of these facts a fair-minded board of education will not refuse school hours and equal credits for music work, if properly approached‡. If this full recognition cannot be secured immediately, a beginning should, of co made utilizing after school hours. f all the children profit by this train their interest can be aroused to t where the work becomes pleasure.

(This article will be continued ETUDE for July.)



†It should be noted however, that in Rochester, where a remarkable system of bands and orchestras has been built up, and in a great many other cities, the rehearsals are held after school, though school credit is given.

‡For "ammunition" to be used in persuading boards of education see "Music and Childhood," prepared by the National Child Welfare Association, "The Value of Musical Training to Children in Schools of America," by George H. Gartlan, and "The Giving of High School Credits for Private Music Study—A Survey," all obtainable from the National Bureau for the Advancement of Music, 45 West 45th Street, New York.

Bring Out the Melod

By Blanche D. Pickering

VERY often students, in playing which has a melody in either r left hand, do not bring out the mel play both hands in the same to example of this kind is seen in lowing measure:

The above is taken from the *Hymn*, in Matthew's Standard Course, Book I. The right-hand should be brought out in a singi and the left hand should be playe softly than the right. I tell my p imagine that the right hand is a sin the left hand its accompanist. An panist must not play as loud as the therefore the left-hand accomp must be subordinated.

Playing for Daddy

By Alice M. Steede

"PERSONALLY, I derive more pleasu hearing a little first-grade piece wel than from an advanced piece that slightly too difficult for the perf So said a well-known musician rec a public address, and this is an opini on reflection, we must all endorse.

From the first year or so of her education the pupil is not often of playing anything, that is, in it great musical merit; but everyone i ested in seeing a little eight-year-ol anything well, and she can give deal of pleasure in a small way; ar at an early stage, she can always h little piece that she can "play for To insure this, some little piece that to the child's own mind should be It may be only a little two or th exercise, but it must be something child likes well enough to work at p and thoroughly. It will take two o weeks, or even a month, before it played really well, that is, witho takes, with some variety of tone an memory.

Any music that has passed thes even though it is found in the instruction book, should be singled having a gold star placed against it acts as a useful stimulus to the chil severance and, when she is asked for "Daddy," or "for company," sh izes at an early age the advantages ing a repertoire upon which she ca

"Those Horrid Inventions! Those Awful Fugues!"

Hints on the Art of Playing the Music of Bach

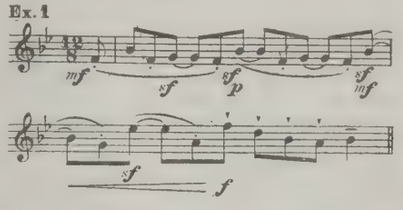
By PHILIP GORDON

The author of this article, who has been for a number of years ...or of music in South Side High School, Newark, N. J., and is con... of the Newark Philharmonic Society, makes a specialty of the music ...h. Under his direction were given the first performance in America of the master's humorous cantata, "Phoebus and Pan," and the first public performance of the "Peasant Cantata." In this article Mr. Gordon tells the student how to play the music of the great John Sebastian Bach. Bach may be made a real delight through careful practice.)

¬HOSE HORRID Inventions! Those awful Fugues!" How many students of music, and how isteners have said just that! Have er thought why people do not talk paragingly of other composers? lo students always complain about , Schumann and Bach; and why do ke so readily to Beethoven, Schu- nd Chopin? Because Beethoven, rt, and Chopin almost play them- even an uninspired player can hem sound interesting; the rhythm e melody carry their compositions But Brahms, Schumann, and Bach not only playing but also a great thought. And thought cannot be from a book of technical exercises, were a problem in finger agility. that we had a book of exercises agility!

Expression in Bach

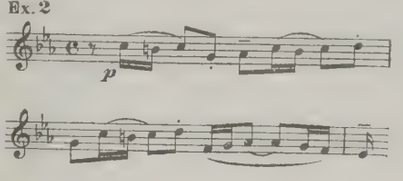
first essential in playing Bach is to r the queer but common notion that sic is devoid of shading, phrasing, nt. Bach wrote most of his music expression marks of any sort, it is n fact, he seldom gives any clue the speed or character of the piece. e reason is not that there was no r such directions, but simply that rote music to be performed under direction, and there was no need to write into the manuscript re- s of speed, volume of tone, or dis- n of accent. If we find in modern of Bach the same absence of ex- marks, it is because editors hesi- tamper with the music of such a not because the music is inexpres-



s are in the habit of thinking that ust use only the editor's brains, heir own. It is only after years ey learn the necessity of thinking dently. Hence they have a tend- play Bach in a mass, at a fixed f intensity, and with a scrupulous ce of everything that might make l like modern music, which is made ble by means of accents, gradations d and of volume, and phrasing or tion. Yet Bach is considered one most modern of composers, despite t that he died almost two hundred go. If his music is so vital that peak of "Bach and other moderns," sy to see at once that the perform- f this music must be thoroughly in character, and that the level, xercise style of playing is far from e.

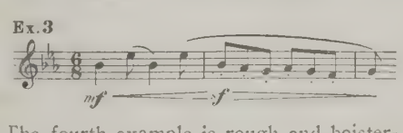
Making Bach Attractive

HIS article we shall consider a of the ways in which the student ke his playing of Bach more artis- more attractive. The most impor- int of all takes its departure from ilow's famous *mot*, "In the begin- ere was rhythm." Bach is remark- ar in rhythm. It was absolutely y to his method of musical com- to have such clear outlines, for he tly developed a whole piece from f theme. The more individual the the more intelligible will be its developments. Individuality was either by unusual skips in the melody (as in the *F-minor Fugue*, "Well Tempered Clavichord, volume 1") or by striking rhythms. Frequently these rhythms are so vivacious that one wonders how they could have been created by the composer of such serious works as the "B-Minor Mass" and the "St. Matthew Passion." But the sooner the pupil learns to appreciate the rhythmic gayety of Bach, the sooner his playing will hold the attention of his audience.



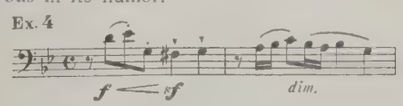
Study the following examples closely. All of them are so distinctive in rhythm that they must be interesting to student and listener alike. The first excerpt is syncopated to such an extent that it is really quite jazzy.

Ex. 1



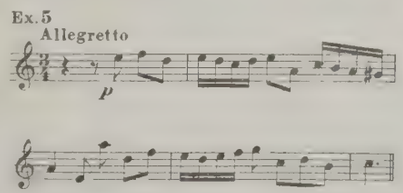
There is unmistakable laughter in the second and third, the latter of which in its opening measure seems to imitate whistling.

Ex. 2

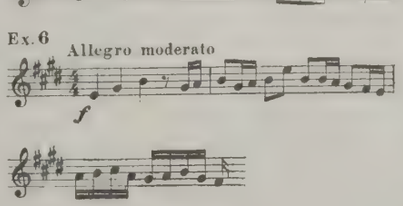


Ex. 3

The fourth example is rough and boisterous in its humor.



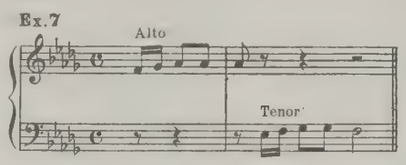
Ex. 4



As you see, it requires a good deal of *staccato, sforzando,* and accentuation to bring out the character of each theme; but is that not vastly different from the pallid style you hear so frequently?

Here are two of Bach's themes with which to experiment.

Ex. 5

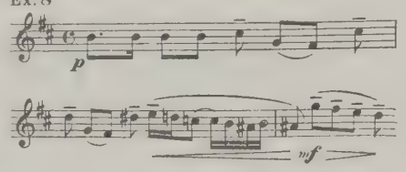


Ex. 6

Study them, decide what to do to bring out their rhythmic outlines. Observe how they acquire life and meaning.

It is equally important to follow the course of the themes through the composition, bringing them out above the web of counterpoint wherever they occur, even if in the bass or the middle voices. The right hand may be playing a subordinate part, and you distort the whole piece if you constantly emphasize the right hand to the exclusion of the true melody. Take the *B-flat Minor Prelude* in the first volume of the "Well Tempered Clavichord" and trace the development of the motive of three notes throughout the piece. The results will surprise you. Note especially, the very end, where the motive occurs in the tenor, just when you would think the composer had no further use for his theme.

Ex. 7



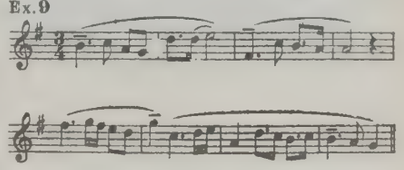
Go over the *Gavotte* of the "Fifth English Suite" in the same way, outlining the opening motive of three notes, clearly, but with grace and delicacy. In the second half of the piece you will find it in the left hand several times.

Importance of Phrasing

Phrasing is of the utmost importance in Bach, because the music is generally complex in structure. You will appreciate the problem if you will take the opening sentence of Milton's "Paradise Lost" and try to read it with such inflection, punctuation, and distribution of emphasis that the meaning will be clear despite the length and complexity of the sentence. The problem is the same with Bach, though here it is augmented by the fact that there may be two or three different melodies sounding at the same time, each requiring its own peculiar phrasing.

One of the first sources of difficulty in phrasing Bach is the double structure of many of the melodies. In example 2 we see such a melody. The essential notes A, G, F, E are imbedded in the general mass, which also contains the relatively important reiterated figure in sixteenths (C, B, C). Similar in plan is this theme from the "B-minor Mass:"

Ex. 8

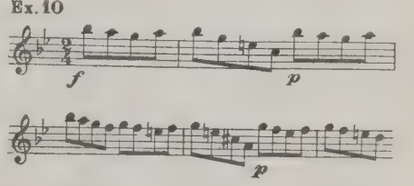


Here there is no difference of rhythm to distinguish the different parts of the theme, as there was in example 2; everything must be made clear by the phrasing alone. It is extremely difficult to play this theme intelligently, simple as it may seem at first sight.

Take the subjects of the fugues in F-sharp minor and in B-minor in the first volume of "The Well Tempered Clavichord," also the *Prelude in B-flat minor,* and analyze the melodies closely.

A great help in phrasing the long lyric melodies of Bach is to compare them with sentences of poetry or prose. On first reading, a long sentence may be far from clear; one must search for subject, predicate and modifiers. So in melodies like the *Air* in the "Fifth French Suite;" complex as the outline may seem at first, it becomes perfectly clear when you go over it many times, dividing it into sections and giving each section its due emphasis.

Ex. 9



Try to get a similar, clear picture of the *Sarbabande* in the "Second English Suite."

Under the head of expression it is easier to tell what ought to be done than to give specific directions for doing it. Expression is largely personal and it is the one element in musical performance that defies teaching. The most one can do is to suggest points that need to be considered in the art of expression.

Gradations of tonal volume must be used copiously. It is true that the harpsichord and the organ could not pass gradually from *piano* to *forte;* and could only change suddenly from loud to soft. But that is no excuse for our failure to play expressively.

There are times when the sudden change from *forte* to *piano* is intentional in Bach, as in example 10.

Ex. 10

Sometimes such cases are recognized by Bach's own designation—he used the full words, *forte* or *piano;* sometimes modern editors indicate *f* or *p,* and sometimes the player must recognize such passages for himself. But there are many melodies—by far the majority—that require a copious use of *crescendo* and *diminuendo.* Such effects were not possible on Bach's instrument, the harpsichord, but you will learn that Bach wrote not for one generation but for all time.

The sustaining pedal—the "loud" pedal—should be used, too, as occasion arises, even though Bach had no such pedal. The middle or *sostenuto* pedal is useful, also, in controlling some of the long notes that occur in "The Well Tempered Clavichord."

Rubato

TEMPO RUBATO, the gradual hastening and retarding of the procession of beats, should be employed wherever it can contribute anything to the hearer's understanding of the music. This applies as much to a fugue subject as to a flowing melody. In the *Air* from the "Fifth English Suite," quoted above, the *rubato* would be used thus, approximately: slower toward the end of the second measure; faster in the third, slowing up at the last note and for about two beats of the fourth measure; fifth measure, in tempo; slowing up on the last beat and into the first beat of the sixth measure; faster to the last beat of the seventh measure, and slower

to the end. Of course, all this must be accomplished gradually—so gradually as to be almost imperceptible to the hearer; otherwise the *rubato* becomes a series of temperamental jerks.

The student should guard against taking the fast *tempi* too fast and the slow *tempi* too slowly. Bach's rapid passages are not necessarily meant for bravura; frequently they constitute the true melody of the piece, as in the *Prelude* of the "G-minor English Suite." To rush over such passages is to make a melody sound like a finger exercise; as Bach is all too frequently made to sound. Nor should one make the mistake of drawing out a slow melody to the point where it becomes impossible to follow the sense. The listener has to keep a whole phrase in mind in order to comprehend the sequence of thought; if the *tempo* drags so that he cannot do this, the piece becomes meaningless. This accounts for the bored faces of listeners who think that the *Air* from the "D-major Suite" (usually played as a violin solo on the G string) is extremely stupid. Another point of importance in playing a slow melody is the necessity of sustaining the tones. This is more difficult on the piano than on the violin, but it is fully as important for the pianist as for any other player.

Probably no other composer has suffered at the hands of performers as much Bach. To play his music well analysis, study patience and thought a huge task, and not many care to plish it; but the student who is wi devote his time to the study of more than amply rewarded in the ment of his mind and in the ins which comes from an intimate ac ance with the music of the great Jo bastian.

Suggestions for Interesting Recital Programs

By Irene Gray Huston

RECITALS accustom the pupil to appearing before an audience, and keep both children and parents conversant with the work which the teacher is doing. Here are a few general and special suggestions which may prove useful:

General Suggestions

1. Plan to have at least three (or as many more as possible) "practice" or studio recitals and one "exhibition" recital in each term.

2. For each one, have a miscellaneous program, which is always necessary with a mixed class, and *a special* program along the lines suggested below, for the second part of the evening.

3. Have cards printed at the beginning of the term with these special subjects on and send them to those whom you wish to interest.

4. Keep an indexed number of large envelopes containing clippings from the ETUDE, one each for each well-known composer, one for articles on teaching, one for articles on opera, and so on. These are a great help when you are looking for material for your special subjects.

5. Do not work alone. Wonderful programs may be given by uniting with an elocution or a vocal teacher.

Special Programs

1. *Biographic* Recitals:—

A course that was successful for one whole year's work, was to take for our special programs the study of two composers an evening. We selected one classical and one modern, or, as the children put it, "a live one and a dead one," and had a short paper or talk about each one, followed by one or more of his compositions that any of the pupils had been studying. Then each child told in one sentence, something which they had found out about either man. (For this we had them use clippings from the ETUDE.) One of our best evenings was spent with Chopin and Percy Grainger. "Life Stories of the Great Composers" by Streatfeild, "Secrets of Success of Great Musicians" by E. Pirani and "Music Masters Old an New" will be found very helpful in preparing this recital.

2. *Feminist* Recitals:—

For this, have short papers on "Women Pianists," "Women Composers," "Famous Singers," "What Women Have Done to Aid the Cause of Music." Have a general discussion on the opportunities women have at present compared with past centuries. Program should be entirely of compositions by women.

3. *Parents'* Recital:—

This is one which arouses great interest. Among the parents of your pupils, it is always possible to find those who sing or play or recite and who can be persuaded to help for an evening. Ask a mother to sing to her daughter's accompaniment and a father to play a duet with his son, and others to play some instrument or give a paper.

4. *Century* Recital:—

For this program, take up the music of each century from the earliest chants to the Futurists' music. Have short talks on the similarity of styles of music, of architecture, of literature and of dress of each period. For example, is there no relation between Bach's writings with its embellishments and seventeenth century architecure with its pointed arches, graceful turrents and intricate ornaments, and the style of dress with its laces and frills and curly wigs? Was it not the spirit of the time that gave us the early monastic music, the heavy columns and stately lines of Roman architecture, and the severely simple draperies which were worn then? Is it, perhaps, the twentieth century spirit which is giving us our ragtime, our Futuristic music, and our skyscrapers? Good musical histories and talking machine records will be useful in this recital.

5. *Christmas or Easter* Recital:—

For Christmas, use old carols and rounds for all to sing, and have a program of Christmas music. The ETUDE gave a splendid list of selections for this a year ago.

A program of spring songs and suitable pieces can easily be selected for Easter.

6. *Quotation* Recital:—

As each number is played, have each pupil give a self-selected quotation or recitation to suit it, Whittier's "Barefoot Boy" with Schumann's "Joyous Farmer," for example.

7. *Nations*:—

Have this national recital in costume, if possible. For example, have Tschaikowsky's Italian Song played by a little girl in Italian costume; Moszkowski's Spanish dances by some one in Spanish costume; a Hungarian Rhapsody by a Gipsy; and so on through the long list of characteristic Polish, Norwegian, French or American pieces.

8. *Opera*:—

Have a paper on the "Story of the Growth of and have some one tell in a few words the story opera from which a selection is played. Have th gram selections from opera.

9. *Symphonic* Evening:—

For this, have each come prepared to describe instrument of the symphony orchestra and bring a picture of it to show. For a social evening t game of Family Coach changed to a symphony or and each child representing an instrument, mak interesting ending.

10. A *Musical Game* Evening:—

There are many musical games which may be u fill in the second hour of a studio evening. Man be found in the Junior Supplement of the ETUDE. are two of our favorites.

1. Tell a story, filling in words by writing m signs on a blackboard and have the children writ one down as they recognize it. For example sta this,—A farmer went to market with a of but, going round a ♯ he upset and fell ♭ on h

2. An Ear Puzzle. Tell a love story and play bars of familiar pieces and have the children fill names as in the last game. The heroine mig Clementine or Annie Laurie and might meet he Away Down Upon the Swanee River, and so on. possibilities are endless. Daniel Bloomfield's ex book *Musical Games and Puzzles* is a very great h

11. *Indian* Evening:—

The ETUDE devoted one whole issue to Indian and it might well be used as the special subject recital. A splendid variety of material may be in the October, 1920, number.

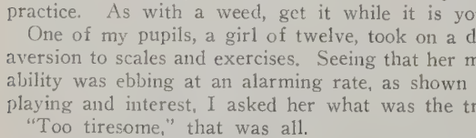
12. *Piano and Elocution*:—

This program would need careful collaboratio tween teachers. Here are a few suggestions,—

1. Recitation....."Witches' Scene" from Ma
   Piano Solo.....MacDowell's "Witches' D
2. Recitation....."Battle of Wate
   Piano Solo.."Marche Militaire"..Schubert-T
3. Recitation...."Ride from Ghent to Aix" or
   Ride of Paul Re
   Piano Solo, or Duet .."Cavalry Ride"..Spi
4. Selection from Mark Twain or Jerome K. Je
   Piano Solo....."Humore

Putting "Pep" Into Practice

By William Francis Potter



WITH the best of pupils, some time or other, the practice period drags like lead. Sometimes it comes in the first starting point of the child's education, at other times the pupil may be expert at the art and yet loathe practice. As with a weed, get it while it is young.

One of my pupils, a girl of twelve, took on a decided aversion to scales and exercises. Seeing that her musical ability was ebbing at an alarming rate, as shown in her playing and interest, I asked her what was the trouble.

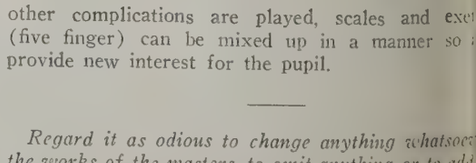
"Too tiresome," that was all.

The next lesson I had some new ideas to try. "Try playing the 'D' scale this way" I urged.

Ex. 1

After seeing me playing it, she said, "But that is only the 'D' scale, and I can play that."

Immediately I came back with, "But why don't you practice the scale? I know that you know the scale; but do you ever get rusty?"



She was forced to admit that she did so, so I took the advantage of a temporary weakness and asked her to play the "D" scale as I did, beginning at the lowest "D" and playing to the highest "F-sharp" and back. She did, stumbling several times.

When she finished she looked up and said, "it's hard isn't it?"

The battle was won; for she had something to conquer, and a different way to practice scales.

With easy five finger exercises, variety can be obtained in the following manner:

Ex. 2

other complications are played, scales and exe (five finger) can be mixed up in a manner so provide new interest for the pupil.

Regard it as odious to change anything whatsoe the works of the masters, to omit anything or to ada thing new; that is the greatest insult you can inflict art.—ROBERT SCHUMANN.

The Teachers' Round Table

Conducted by PROF. CLARENCE G. HAMILTON, M.A.

Professor of Pianoforte Playing at Wellesley College

This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory, History, etc., all of which properly belong to the Musical Questions Answered Department. Full name and address must accompany all inquiries

PROF. CLARENCE G. HAMILTON

Ragtime as Teaching Material

RESPONDENT takes exception to an answer re- ren in the Round Table, in which it was stated best teachers do not give ragtime pieces to ils. He goes on to say:

rtain people make the assertion that 'ragtime' should be abolished and, as this paper states, ught, or one would be ranked as a second-rate er. There is an erroneous impression amongst people as to what constitutes ragtime. . . people think that classical and ragtime music vo different forms. Ragtime is as old as speech, is coeval with music. It is not, as generally be- l, a class of music suitable only for the dance- and beer saloon, but is simply an exaggerated of contra-tempo, which is found in scores of ld and new composers, both in sacred and secu- mpositions. Therefore, to prohibit the playing gtime, so-called, would be to prohit the playing ny oratorios, operas and masterpieces. The s of classical composers teem with examples, as neio' and 'Judas Maccabeus.'"

e correspondent declares, it all depends upon finition you give to the word "ragtime." As o piano music, the generally accepted meaning ord, and the one evidently understood by the ho asked the original question, is that it is a type that is founded upon the reiteration of a syn- rhythmic figure which, with some changes rung is as follows: $\frac{2}{4}$ | ♪♪♪ ♪♪ | ♩♩ |

it is not the presence of this figure in itself nfits a piece for piano teaching. It is a form m which, although it subverts the normal accent easure, may yet be occasionally used by an art- oser to produce varied or piquant effects, as in of the operas, oratorios and other standard works d. But such a legitimate *use* by the masters earing whatever on the *abuse* of the rhythm by and popular composers, whose poverty of in- s shown in their harping upon a single rhythmic hich is, as a rule, joined to banal harmonies and and is couched in a style devoid of pianistic Some reputable modern composers, to be sure, empted to glorify ragtime, generally with only nt success, as in the case of Stravinsky and ndemith. Exceptions to the rule are Debussy's *Golliwog's Cake Walk* and John Alden Carpen- *lonaise Americaine,* both of which claim an place in the teacher's repertoire.

ame correspondent scores heavily those piano who are themselves quite unable to perform in nd who devote so much time to the finicky de- technic that their pupils are never prepared to ir pieces as a whole.

are two questions here which bear investgiation. v no one should pose as a piano teacher who acquired a respectable, at least, pianistic pro- and this proficiency should increase, rather than , with added teaching experience. It is a grave for a piano teacher to fill up his time so ily with lessons that his own practice is neg- Sooner or later he will reap the results of this seeing other, more progressive teachers out- n in the race. Keep a certain hour in each day o personal work; and do not allow it to be by outside demands.

d, while emphasizing nicety of details in pupils' e that these details are finally unified and that il thus builds up a repertory which he is com- interpret well whenever called upon to do so. ecently invited to hear two little pupils—brother r—play, who had been studying for a few weeks he summer with a friend of mine who is an piano teacher. Each one played some technical s with care and discrimination as to varieties of Each then performed from memory a short study, both slowly and faster, at the behest of her. Finally, each one interpreted—I use the lvisedly—one of Schumann's *Children's Pieces,* in such a way that each phrase was invested al poetic meaning and with melody nicely adjusted to accompaniment. Afterwards the boy played one of his own compositions, a clever little waltz which he had been encouraged to work out for his own delight.

These children had, of course, some previous instruction; but their summer's work accomplished gratifying results in increased powers of both technic and interpretation.

We cannot expect to make proficient performers out of all or even the majority of our pupils. Many children will, for some reason or another, abandon their piano study in later life. But their time has not been spent in vain if their musical insight has been aroused and if they have begun, even haltingly, to speak in the language of music. We have plenty of expert pianists, and reproducing pianos are multiplying their results. What we sorely need, however, is a more widespread musical intelligence and power of discriminating appreciation.

To accomplish this end, a prime requisite is to cultivate a taste for the best music. There is no more sense in a piano teacher's use of musical doggerel, indeed, than there would be for a teacher of literature to present to his class rhyming advertisements of patent medicine or shaving soaps as an education in English poetry. It is the duty of a piano teacher to encourage the study not of musical paste and tinsel but of those gems of musical thought that are readily accessible to whosoever will make use of them. So I reiterate that no self-respecting teacher will feed his flock on popular ragtime jazz, or any other unworthy materials.

A Pianist's Daily Routine

Of what should the practice consist for a pianist who devotes five hours per day to the subject, and who wishes to increase his repertoire? Please mention what finger exercises, scales, arpeggios, chord studies, review, and so forth, he should use.

My present repertoire consists of about fifty works, ranging from Bach to Debussy.

J. R. M.

Your practice time may be divided somewhat as follows:

1. Technic	½ hour
2. Studies	¾ hour
3. New piece	¾ hour
4. Interpretation	1 hour
5. Memorizing	1 hour
6. Review pieces	1 hour
Total	5 hours

Materials for No. 1 may be found in Philipp's *Complete School of Technic,* and J. F. Cooke's *Mastering the Scales and Arpeggios.*

For advanced studies (2), I suggest Moscheles' Op. 70, Books 1 and 2; after these the studies of Chopin, Liszt, Rubinstein, and Scriabin.

For the new pieces (3), alternate a classic with a modern, a Beethoven Sonata with a Rachmaninoff Prelude, and so forth. No. 4 will consist in interpretation work on the new piece of the preceding week, which, in No. 5, is finally memorized and placed on your permanent repertoire.

For No. 6, divide the pieces which you have previously mastered into groups of three, and practice one group each day for "finishing points." Take the groups in order, so that all are reviewed.

Attention is called to an advertisement in another part of this issue, describing the New Etude Educational Service Department.

Practice, Metronome and Methods

MISS L. VAN A. propounds the following comprehensive queries:

1. What is the right way to practice a lesson in order to get the most out of it?
2. How do you set the metronome to determine the rapidity of such tempos as *Allegro, Andante, Allegretto,* and so forth?
3. Name different methods of piano playing, and show the points of difference between them.

1. To be uniformly effective, piano practice should be conducted with both *system* and *concentration.* By the former, certain daily periods are set apart, and these periods are divided among the different items of the lesson so that each item is given its due share of attention. But, to produce the best results from this system, the player should keep his mind constantly intent upon the work in hand, so that his fingers may be properly controlled, and all the details of touch and expression duly observed. Much practice is ineffective or even harmful just from lack of such attention on the student's part.

Finally, practice slowly until all difficulties are eliminated. "Be sure you are right, and then go ahead."

2. Such tempo marks as you mention are relative and not absolute in their meanings. A composer, for instance, may write the word *Allegro,* which literally means *cheerful* or *merry,* over two pieces of marked difference in rapidity. Moreover, different pianists take the same piece at quite different degrees of speed.

When the composer inserts a definite metronome mark, the problem is somewhat simplified, although even the composer himself is not always reliable. Schumann, for instance, is thought to have possessed a defective metronome, and accordingly to have indicated an unduly fast tempo for his works. When, however, metronome marks are added by editors, as in the case of Bach's compositions, such marks may be accepted merely as a statement of personal opinion, more or less authoritative according to the standing of the editor.

But when there are no marks given, one should try to carry out the spirit of the piece, and to set the metronome accordingly. Only, in case of doubt, let the tempo err on the slow, rather than the fast side!

3. Human nature is fond of labels: and many so-called piano "methods" are really labels tacked upon the teachings of eminent piano pedagogs who have given little, if any, authority for such names.

Piano technic has grown through a number of phases, each of which had its peculiar features. Before the time of Bach, for instance, the thumb was used little, if at all, and the other fingers were held quite flat on the keys. Then the thumb was brought up and the fingers curved. In this phase, stress was placed upon a quiet hand, so that the desire to strengthen the tone resulted in raising the fingers high, and hitting the keys hard, as was done in the first half of the nineteenth century. Later, modern ideas were instituted by such masters as Liszt and Chopin, by which much more freedom in hand-position was permitted, while stress was placed on relaxation, arm-weight, and so forth.

To enumerate and explain all the varied fads and fancies which resulted from these gradual changes would require a good sized book, and would lead us into a sea of complexities. Fortunately, pianists are coming to recognize only one final method—the method of "common sense," and to abandon a mere slavish adherence to the dicta of prominent teachers, however valuable such dicta may be if applied with proper discretion.

The Musical Scrap Book

Anything and Everything, as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

BEETHOVEN'S WAR-TIME MUSIC

THE recent Great War had such a crushing effect upon creative effort in music that it is hard to realize how much really great music was produced during the Napoleonic wars a century ago. Conditions were much the same. Central Europe was constantly being invaded. Money greatly depreciated in value. Thrones tottered and fell, yet through it all Beethoven and many others did some of their best work.

Beethoven was assisted by the fact that Archduke Rudolph, Lobkowitz and others "together guaranteed him an income of 4,000 paper florins, nominally $2,000, but only $1,450 in real money," says W. H. Humiston, in a brief monograph on Beethoven.

"On May 12, 1809, the French entered Vienna and warlike conditions were not very comforting to the Viennese or to Beethoven, who was much annoyed by the firing. In spite of this he went on composing, and the last and best piano concerto in E flat known as the *Emperor*, was written during this year, as well as the spring quartet in the same key, opus 74, known as the *Harp Quartet*, on account of the numerous passages played pizzicato and suggesting a harp. The piano sonata in F sharp, opus 78, a favorite of the composer's, was also written during this year.

"Another 'programme' work was begun, the *Sonata in E flat*, opus 81a, known as *Les Adieux, l'Absence, et le Retour*. This was to commemorate a trip by the Archduke; it was finished on his return and dedicated to him. During the first part of 1810 was written the music to Goethe's *Egmont:* an overture, two songs, several *entr'actes* and 'melodrama' music."

There is an idea very prevalent that good music is hard to understand—something difficult, recondite, abstruse. That is quite a mistake.—SIR HENRY HADOW.

SAID BY BRAHMS

IN HIS *Recollections of Brahms*, George Henschel includes some letters received from the great composer. Chiefly they relate to transitory things, but a few passages here and there are worth quoting:

Brahms notoriously disliked taking part in concerts, and the fact evidently caused him some embarrassment. "At least *you* should give up believing in the rumor that I had a special dislike for English concert-rooms. No more so than for others. Into none of them do I ever go with pleasure, and people ought to see how it is easier for me being caught once in a while in the snare of a German invitation, than undertaking the long journey to England followed by a restless stay there. You really could explain matters from time to time as they really are. I have just enough to do with concerts anyhow and fight against it on the continent as well as over there. . . . Well—don't forget Richter and explain to the old and new Philharmonists what a grateful heart I have—but what a shy one!"

About metronome markings Brahms says: "I think here as with all other music the metronome is of no value. As far at least as my experience goes, everybody has, sooner or later, withdrawn his metronome marks. Those which can be found in my works—good friends have talked me into putting them there, for I myself have never believed that my blood and a mechanical instrument go well together. The so-called 'elastic' tempo is moreover not a new invention. 'Con discrezione' should be added to that as to many other things. Is this an answer? I know no better one; but what I do know is that I indicate (without figures) my tempi, modestly, to be sure, but with the greatest care and clearness."

Most composers write uproariously because they are unable to set down a good melody.—W. J. HENDERSON.

NAPOLEON AND MÉHUL

"KIDDING" Napoleon might seem to have been a dangerous game, but Méhul did so successfully enough to win the warm regard of that imperious personage, according to Mary Hargrave in *The Earlier French Musicians*.

"Napoleon had a great liking for Méhul, not entirely for his musical genius, which he did not altogether appreciate, but because he was personally sympathetic," says this author. "Méhul always dined once a week at Malmaison and the First Consul was fond of discussing music with him, as with other artists. He frankly thought the Conservatoire and Méhul's own compositions too 'tudesque' and 'scientifique.' His idea was that music should be pleasing to the ear, the present school was too noisy. He preferred the Italian School of light opera (Paisiello), and so forth.

"Méhul, by way of reply, showed surprising versatility by composing (*incognito*) the music of *l'Irato*, a light opera *bouffe* completely different from his usual style. Marsollier had written the amusing libretto, but Méhul did not acknowledge his share of the work at first. It was announced as an Italian opera with French words, music by 'Signor Fiorelli,' and was performed during the Carnival (17th February, 1801). The result was an extraordinary success and a great triumph for Méhul when he disclosed his identity with 'Signor Fiorelli.'

"Bonaparte was delighted with the hoax and begged Méhul to 'deceive him often in this way,' a doubtful compliment. Méhul dedicated *l'Irato* to him when it was published."

GLINKA'S CHILDHOOD

MICHAEL IVANOVITCH GLINKA, composer of *A Life for the Czar*, and thereby the founder of modern Russian music, was born in 1804. He was a sickly child made sicklier by a grandmother who inspired him with a morbid dread of disease that proved to be life-long, according to Montagu-Nathan, his biographer.

"He was 'piously inclined,'" says Montagu-Nathan, "drew pictures of churches in chalk on the floor, and appropriately followed this up, as soon as he could read—which was at a remarkably early age—by reciting passages from the Scriptures so impressively as to bring tears to the eyes of his doting grandmother and her elderly cronies.

"His musical predispositions were manifested by a craving for every kind of bell-sounds; he sought to imitate the clanging that penetrated the walls of the house by playing bell-ringer on two copper vessels. When he was unwell he was given some small hand-bells, that appear to have served to maintain a strength of spirit. Presently his fondness for the Bible gave place to a keen interest in books of travel.

"On his grandmother's death, his parents, alarmed at the disastrous effects of this *régime* of mollycoddle, made an attempt to restore their child to a normal condition of body and mind; they were too late. Glinka's life was spent in combating not only real but imaginary complaints."

Glinka's father frequently entertained lavishly. The playing of Russian folk-tunes by a wind-band during supper-time greatly delighted the budding composer, and doubtless laid the foundations for his life work of developing the national musical resources of his country.

ITALIAN OPERA—EIGHTEENTH CENTURY STYLE

EIGHTEENTH century Venice had eight opera houses, while Naples had four or five, including the San Carlo, one of the largest in Europe, Romaine Rolland reminds us in his *Musical Tour*. Compiling his information chiefly from Burney and De Brosses, he takes us to witness a typical opera night.

"The performance begins, as a rule, at eight o'clock, and ends about half-past twelve. The cost of the places in the parterre is a *paule* (twelve cents American) unless admission is free, as is often the case in Venice and Naples. The public is noisy and inattentive; it would seem that the peculiar pleasure of the theatre, dramatic emotion, counts for very little. The audience chats at its ease during part of the performance. Visits are paid from box to box. At Milan, 'each box opens out of a complete apartment, having a room with a fireplace and all possible conveniences, whether for the preparation of refreshments or for a game of cards. On the fourth floor a faro-table is kept open on either side of the building as long as the opera continues.' 'At Bologna, the ladies make themselves thoroughly at home; they talk, or rather scream, during the performance, from one box to that facing it, standing up, clapping and shouting *Bravo!* As for the men, they are more moderate; when an act has finished, and it has pleased them, they content themselves with shouting until it is performed again.' In Milan, 'it is by no means enough that everybody should enter into conversation, shouting at the top of his voice, or that one should applaud, by yelling, not the singing, but the singers, as soon as they appear and all the time they are singing.'

"Besides this, the gentlemen in the parterre have long sticks, with which they beat the benches as hard as they can. They have colleagues in the boxes of the fifth tier, who, at this signal, throw down thousands of leaflets containing a *sonetto* printed in praise of the *signora* or the *virtuoso* who has just been singing. All the occupants of the boxes lean half out of them to catch these leaflets; the *parterra* capers about and the scene closes with a general 'Ah!' as though they were admiring a Midsummer night bonfire."

MUSIC AFTER THE REIG TERROR

ALTHOUGH Grétry declared that musical works were inspired du Revolution, declares Mary Harg *The Earlier French Musicians*, it the fault of those in authority, much to encourage the Arts, e music. Chénier, doubtless, voic ideas when he proposed the insti a Conservatoire de Musique.

"Even in the Reign of Terror vention respected music, recogni power of a song like the *Marse* inspire armies. One of the first ac Revolutionary authorities, as far 1789, had been to grant theatres to manage their own affairs, and a diate consequence of this was the sal of a troupe of Italian artists u management of Marie Antoinett dresser, whose place at the théâ deau was taken by French actor were soon in keen rivalry with th Comique.

"Singers and actors no doubt r the lost magnificence of court p ances, where scenery, costumes, c were on a lavish scale. Under régime, too, a generous if arbitr tem of pensions and royal gifts warded genius. Old artists especi the loss of this support, but the ones, like Méhul, greeted the new things with enthusiasm, until the horrified by its excesses. The lit of musicians seem to have drawn together during this period, especia ing the Reign of Terror, forming of friends united by common inter a common danger: Grétry, Ch Gossec, Berton, Méhul, Lesueur, dieu, the youngest of all. The obliged to take part in the numer triotic fêtes and to collaborate in productions for those occasions."

I cannot detect any suggestion o ness in much of the modern music. It will be a sorry day for music non-melodic school ever obtains th hand.—SIR FREDERIC COWEN.

WANTED—A MODERN BER

"MUCH of recent orchestral writi persistently lavish of its resources t individual characteristics of the vari struments are obliterated altogethe marks Sir Charles Villiers Stanfor *Musical Composition*.

"Composers have been naturally netized by the richness and sonority Wagner obtains with his orchestra *ments of climax*, and have smeare all over their scores irrespective of of color and design. Every phras highly colored as its neighbor, a power of strong contrast disappears.

"This is the precise reverse of chestral theories of the most imag and experimental orchestrator of times, Berlioz. He knew too w glories and beauties of individual ments to encourage his successors to them all into a cauldron and boil th together. If his invention and power had been equal to his poeti mand over the orchestra; if, in a w had been as great a draughtsman as a colorist, his influence would hav paramount at the present day. Th bined characteristics of Wagner an lioz, the collectiveness of the one a individualism of the other, if the va their music had been on an equality, have kept the orchestral road clear. luxurious outbursts are often used ceal poverty of invention. 'The grea number of staves in the score, the the number of ideas,' was an astut ment by a great conductor."

CHOOSE YOUR PIANO AS THE ARTISTS DO

GIESEKING PLAYS ONLY THE

Baldwin

"It is truly marvelous with what suppleness the Baldwin responds to *every* intention of the artist and permits him to realize *every* effect, dynamic or technical, *every* nuance of expression, even the most delicate. I am truly happy that I have chosen the Baldwin."

In this high esteem, the enduring purity and resonance of Baldwin tone is held alike by Gieseking, Bachaus, dePachmann, Carreras and dozens of other great pianists of past and present generations.

A SUGGESTION

Choose YOUR Piano as the artists do. The book, "How Artists Choose Their Pianos," will help you in selecting the instrument for your home. We will gladly send you a copy free.

You will share the enthusiasm of discriminating musicians the world over when you visit any Baldwin dealer and play the Baldwin yourself.

BALDWIN Uprights, $850 and up; Grands, $1400 and up; Reproducing Models, $1850 and up.

Convenient payments if desired.

ANNOUNCEMENT

The Juilliard Musical Foundation awards fellowships and scholarships to exceptionally talented students in composition, instrumental (piano, violin, 'cello) and singing, which provide instruction under eminent artist instructors, and in accredited institutions.

They will be granted only to students of American citizenship, who intend to follow music as a vocation, as public performers, teachers, composers or conductors.

Such awards will be classified as graduate or undergraduate.

Graduate students should be over fifteen years of age and under thirty, and have a general education equivalent to a regular four-year high school course.

They must be able to pass tests in ear training, sight reading, and general theoretical knowledge.

Piano students must be prepared to play a prelude and fugue from Bach, a sonata of Beethoven, a nocturne of Chopin, or a similar composition of a group of two numbers of their own choice.

Violin students must be able to play major and minor scales and arpeggios in three octaves. Etudes by Kreutzer, Fiorillo and Rode. A concerto of corresponding difficulty of the Bruch G minor or Wieniawski D minor, and a group of three numbers of their own choice.

'Cello Students: Scales and arpeggios in major and minor keys, with various bowing through three octaves. An etude or caprice by Franchomme, Piatti, Duport, Servais, Lee or Dotzauer. Part of a Bach Suite unaccompanied. A movement from a sonata or concerto and a group of two modern numbers.

Vocal students will be required to perform vocalises, an air from Glück, Handel or Mozart; a song from a foreign language, and a song by standard modern English or American composers.

Composition students must be able to demonstrate a knowledge of harmony, counterpoint and an elementary knowledge of form, and must submit original works in strict or free form and be able to develop a given theme in strict or free form.

Students receiving graduate appointments will receive their instruction at the Juilliard Graduate School, 49 East 52nd Street, New York.

Applicants for undergraduate scholarships must be over twelve and under twenty-four years of age, and be able to demonstrate unusual musical ability.

Undergraduate scholarships will not be granted to students who are financially able to pay for instruction.

The place of study for the undergraduate student will be determined by the examining board after each student's qualifications and needs have received individual consideration.

ZONE EXAMINATIONS

In order that students from all parts of the Nation may avail themselves of the opportunities offered by the Juilliard Musical Foundation, a number of Zone Centers will be designated in different parts of the U S. Examinations will be conducted in the following cities on dates specified below:

CINCINNATI	MAY 18, 19
KANSAS CITY	MAY 21, 22
MINNEAPOLIS	MAY 24, 25
CHICAGO	MAY 27, 28
NEW YORK	JUNE 1 TO 8
LOS ANGELES	JUNE 16, 17
SAN FRANCISCO	JUNE 21, 22
PORTLAND	JUNE 25, 26
SEATTLE	JUNE 29, 30

In addition to the Zone Centers mentioned, the Foundation is arranging to establish, before the spring of 1927, examinations in Boston, Washington, Atlanta, New Orleans, Detroit, Dallas, Denver, and other localities as needed.

In each Zone there will be a local examining board; all examinations will be supervised by an exaniner from New York.

Application forms will be furnished by the office of the Foundation upon request of the individual applicant, and when filled out should be filed in New York two weeks in advance of the date of the first examination.

PROFESSIONAL ENGAGEMENTS

All graduate students will be assisted in securing professional engagements.

The Juilliard Musical Foundation will arrange a New York debut for qualified students and assist in every way possible, securing professional performances in other parts of the Nation whenever the Foundation feels they are ready for a professional debut.

On the other hand, it will do everything in its power to discourage ill-advised debuts.

Announcements will be made concerning the first debuts arranged by the Juilliard Musical Foundation.

Students who are qualified for teachers will be aided in securing positions with reliable institutions.

Internationally Famous Pianist
Prefers the KIMBALL

IN his public recitals throughout this country, in his studio work, and when composing, **George Liebling** is enthusiastic over his Kimball Piano. Honored on two continents, Mr. Liebling has had occasion to know many makes of pianos, yet, in his own words, he has chosen the Kimball because "in all particulars it attains the highest achievement in the realm of piano making."

When you purchase a Kimball for your home, your judgment is confirmed by the approval of great pianists like Mr. Liebling and by other musicians equally renowned, by the verdict of expositions which have made history, and thousands of satisfied owners.

The success of the Kimball is founded on merit. Its reliability is due to the complete manufacture within the Kimball factories and the purchaser is amply protected. Whether you are considering a grand, a reproducing piano, an upright, a player piano, a pipe organ or a phonograph, you should see the Kimball before buying.

Kimball prices are impressively moderate.

The Etude Music Magazine

Educational Service Department

This new Department, organized by the Theodore Presser Company, in connection with THE ETUDE MUSIC MAGAZINE, is a logical development of the service that this Company has been conducting for years.

The staff of experts, now retained regularly at the home office of THE ETUDE MUSIC MAGAZINE, includes specialists of international reputation, graduates of leading American Universities, and musicians trained in foremost European conservatories.

No charge of any kind whatsoever is made for this service.

The Department is distinctly not a musical correspondence school. It is designed for *emergency* information upon questions pertaining to teaching problems, musical material, study problems in musical theory, musical history, technic, and items of general musical interest. It will concern itself almost exclusively with those problems which cannot be answered through the columns of THE ETUDE. It will have the coöperative assistance of renowned musicians in all branches of musical art.

It will NOT attempt to answer questions that obviously deal directly with examinations prepared for the benefit of the student, and which should be answered by the student.

It will NOT state the relative standing of artists, teachers or schools; but of the last two it will supply lists of individuals and institutions with which the inquirer may correspond and then form his own opinions.

It CANNOT undertake to choose musical instruments nor to state their comparative qualities. It will, however, furnish lists of reliable makers.

It CANNOT appraise the value of violins, by mail.

It CANNOT undertake to write essays or papers, nor can it prepare elaborate recital programs; but it will be glad to recommend books and former ETUDE articles from which authentic materials for such purposes may be obtained.

Make all questions short and to the point. In requesting information regarding pieces in particular grades, kindly use the "scale of ten" as employed in the "Guide to New Teachers," a copy of which will be sent gratis upon request.

If possible, confine the questions intended for this Department to one sheet, and be *sure* that your *name* and *address* appears on *this sheet*.

Questions relating to business matters, or to other interests of THE ETUDE, should be placed upon another sheet.

Notwithstanding the immense volume of our correspondence, it is our ambition to answer all letters with the greatest possible dispatch, courtesy, accuracy and completeness.

All letters should be addressed to THE ETUDE MUSIC MAGAZINE.

At the top of the sheet bearing questions, place in a bold hand:

Etude Educational Service Department

This will greatly help us in separating correspondence for this Department from that intended for our regular business, and thus will insure to you a more prompt reply.

The Singer's Etude

Edited by well-known Specialists

It is the Ambition of THE ETUDE to Make This Voice Department "A Vocalist's Magazine Complete in Itself"

Studying a Song

By Leon R. Maxwell

What Is a Song?

A song, most people would agree, must have words, a vocal melody, and an accompaniment; otherwise it is not quite satisfying.

A song without words may be good for the piano, but when sung it is little more than a glorified vocalize.

A solo song without an accompaniment sounds empty to most ears.

In theory, then, words and accompaniment are essential features of a song. In practice they are disregarded by most students of singing. Even in the rare cases when the words are clearly and correctly brought out, the singer is likely to be puzzled if asked the meaning of the whole song text; he will have to read it to answer, even though the language be English. The accompaniment exists, all singers know, but it is apparently important only as a more or less reliable prop for the voice.

Perhaps there is little incentive for the singing student to pay much attention to the message of the words and the accompaniment, for the average listener applauds loudly if he likes the melody and the quality of the voice. He comments surprisedly if he catches many of the words, but cares nothing for the quality of the poem. He forgets the accompaniment unless the pianist makes glaring mistakes.

But there is a joy in singing quite apart from the average listener's tastes or of the satisfaction of bringing out a melody in beautiful tones. There is the joy of the song itself—a work of inspired art if it is worth singing—and the joy of recreating this tiny but important product of two other imaginations, the poet's and the composer's. To the student who loves music as well as the sound of his own voice the joy of helping to create anew a beautiful song is the greatest joy of all. Why miss most of it, as we do if we study only the melody and the vowels and consonants that form the words?

If we follow in imagination the composer as he creates a song, perhaps we may discover what a song really is and what the singer must do to give it a new birth.

The Words

Surprisingly enough, many people still think that a composer first makes his tune and then looks for a poem to fit it. Of course this is never true of good songs. The poem comes first.

The composer is struck by a poem that seems beautiful to him. He sees in it musical possibilities. He reads it over and over until he knows it in every detail and as a whole; often he learns it by heart, he recites it aloud. The poems most suitable for songs are usually pure lyrics, telling no story, but emphasizing one mood. What is this mood and what bit of music will best express it? Having discovered the right musical idea, the composer is ready for the task of writing the song. When the poem tells a story, the basic musical idea may be more descriptive, more realistic, more obvious than when the single mood is everything, but it must be found before any part of the composition is set on paper.

What has this to do with the singer?

He starts a long step ahead of the composer, for he has the completed artwork before him and, unless he is superhuman, he will wish to hear the music first to see whether it appeals to him. No harm in that, surely. But he has not yet begun to study the song.

When he does begin his study, better results—often quicker—will come if he proceeds like the composer.

Read the Poem

The student should read the poem until he understands it, which means that he must feel its mood and become acquainted with such details as the metrical swing, the beauty of the phrases, the place of each verse in the total effect, the meaning of every word. We smile at the innocence of the natives of the Kentucky mountains who sing their traditional ballads without knowing or caring to know, the meaning of oft-repeated words like "steed" and "palfrey." Yet the average singer, who has not the mountaineer's excuse of tradition or of lack of opportunity to learn, is often content to sing whole poems, to say nothing of words not in the singer's common vocabulary, without knowing what they mean. This is most often true, of course, of songs with foreign text, but it is also true of songs in the native tongue. The perfectly honest singer will never sing about anything he does not himself understand. The dictionary and a little thought will solve all the difficulties of an English poem. When the text is foreign, the task is harder, but it must be met if the song is to be studied. Usually the accompanying translation will give a general idea of the poem's meaning, or, if no translation is printed in the copy, one may get a translation from the public library or from some person who knows the language. But a translation never follows exactly the foreign words and, since a true interpretation depends upon details as well as the whole, the student should feel it his duty to learn the meaning of each word.

The composer recites the poem aloud to get the effect of vocal inflections, the word and metre accents, the rhythm, the sonority of the vowels, the strength and expressiveness of the consonants. The singing student must certainly do likewise. This will prevent later mistakes of accentuation (for few singers seem to know which word in a sentence is most important!) and it will also help in determining the proper vowel coloring. The singer in this process should go even further than the composer, for the singer must watch carefully the quality of his pronunciation and the clarity of his enunciation.

When the singing student has thus become familiar with the poem, he, like the composer, is ready to attack the music.

The Music

It was pointed out above that the good composer sought a bit of music which should express as perfectly as possible the underlying mood of the poem. The chosen phrase or motive will be the germ of all the rest of the music. It will appear time and time again, varied of course according to the demands of the changes in sentiment in the poem. It may be in the voice part or it may be in the accompaniment. Sometimes it is a real melody; sometimes only a piano figure. Wherever it is or in whatever form it may appear it is almost certain to be important.

In studying the song the student should seek this basic musical idea. When it is in the vocal part he may rejoice and plan to bring its mood clearly and beautifully to the listener. When the piano has it, the singer must resolve to play fair with the accompanist and permit him to give the composer's idea its proper

The singer who has never trie surprised at the pleasure of fol little piece of music in all throughout the song. Often th few phrases that do not show tionship to the parent motive, thrill there is in discovering ho phrase expresses something the dimly, but could not say clearly

Already the music is illumina very simple and easy search fo growth and variation of the pr sical thought. There are other as interesting, that the singer tice in order to know the song pret it well.

Each time the motive or one dren appears it is likely to be a by other music with marvel When the principal musical tho vocal melody, the accompanyin of course the piano part. Whe ist plays the motive, he usua panies it himself, at the same ti singer is adding a lovely melo times this accompanying mus piano will be still other mel sound against the principal against the singer's part. Alm it will be harmony, chords sou plete or broken up into single finally blend. Whether new m chords, they offer many ch thrills in recreating the song. mood of the words is light and accompaniment will be delica harmony that sparkles. When is calm and quiet, the accompa mony will be serene and move from one beautiful coloring t When the mood is bitter, or tra spairing, the chords will be heavy, sometimes ugly. Wha mood, the accompaniment chang along with the vocal melody.

Watch the Accompanime

If the singer pays attentio changes in the accompaniment, ready to borrow strength, colo sion, which his voice alone co give. At the climax of his son songs have climaxes—he will p upreaching chords of the accor to burst with him into the ove tone, the startling *pianissimo*, t less agitation, that the mood dic will see the possibilities of ne sion that come with an awarer sudden silence, a startling modu a novel rhythmic figure in th paniment.

Rhythm! How few singers r vital part it plays in interpretin Rhythm does not consist of cou beats in a measure and being each note has its correct number Measure counting may be a go ning and perhaps fewer songs w to stagger as if drunk if more actually beat out the time. But the A B C of rhythm and one much further if one is to feel Few things are so monotonous a a singer accent the first beat of e ure of a song. Real rhythm refu tied down by bars. Usually a phrase stretches out over sever ures and ends in a masculine m some strong accent or, in femin ion, changes its mind and winds in graceful weakness. It is portant for the singer to watch the rhythmic phrases, which, like monies, change slightly in chara each change of detailed mood wh taining the essential swing. Th help a lot in determining the b and endings of rhythmic phrases, cannot always be trusted, for s there is a rhythmic impulse which to halt at each punctuation ma

Song Recitals for the Student

By Beatrice Wainwright

What is the best attitude for the vocal student, when listening to a song recital? This question does not apply to the pose of the body, but to the mental state.

It is well to be acquainted with the program in so far as possible, before attending a concert. This eliminates the distraction of trying to grasp what the artist is singing about. Go with the desire to learn.

A song recital given by a great artist is more valuable than a number of singing lessons. It is truly a master lesson in itself and should be so considered by the student. Intelligent criticism is also learned by attending concerts. This does not mean merely to pick flaws, but to be able to understand in a comprehensive manner the work of the artist.

The inspiration to be gained by listening to a great singer is invaluable to the student, aside from the lesson in interpretation, tone production and style. Nevertheless, they are not always to be imitated. Some of the most popular singers have grave faults, but their genius and excellence in much of what they do put them on the pinnacle of success.

Many people think when they have heard a singer that they need never hear that same singer again. This is a narrow view to take. When a singer is a fine artist and has something to offer, the student should hear her many times, if opportunity makes it possible so to do. A concert should be attended with a view to intelligent understanding of the music and not merely to get the emotional thrill nor to admire the physical beauty or charm of the artist. These are all part of an artist's qualities, but not the most important, particularly to the student, who should make the hours spent listening to the great singers count for much and store up the lessons learned for future use.

"The thing our young singers must do is to find ideas. It is the idea behind a song that gets it over. Song interpretation, and its spirit, constitute my hobby. Spirit, that is the word. Without feeling it the singer cannot transmit to others. I do not care how fine the tones are, without the proper spirit the song is absolutely worthless."

—Mme. Charles Cahier.

UDE

phrasing in song-singing is likely to depend upon a feel-hm than upon a knowledge of here a breath may be inoffen-

oser tries to make the music er. If he did not, he would nposer since composing means gether." The structure and any composition is commonly s its "form." Unfortunately iggests stiffness, but of course e apparent freedom in form as ness. Probably the greatest song composer exhibits is his ollow the moods and accents ds, changing as they change, same time creating music that ally and spontaneously and yet her so that the whole song is neatly balanced composition. oyment of a single basic musi-hich has already been spoken of the ways in which a com-; his music. There are others.

The Reception

singing students will notice sic at the close of a song is etition or at least reminiscent c at the beginning. Sometimes, does not offer a natural op-or such a repetition, the com-repeat some important verses occurred early in the poem. nay balance the beginning and writing music which the piano the vocal melody is finished. the close a reminder of the song composer is following tioned principle of balance that sed in nearly all compositions pleasant to the ears, for every-o hear again something that is newhat familiar. Of course be a middle part of the song sts strongly with the rest; he reminiscence would be less n modern songs it is likely to fficult to follow the principle t, contrast and repetition. The nposer expects more from his He will disguise his repetitions but even the most modern will where. All through any song be longer or shorter phrases peated to give the music unity. es in the repetitions and the parts that stand between the provide the necessary variety. er who takes the trouble to orm of a song will be able to into music that the musical es not suggest. The general terpretation is never to repeat nusical phrase. This does not the notes are changed—an un-sin in a worthy song—but ery appearance of the same quality and intensity of the the general expression are ver so slightly. Like all rules xceptions to this one, when an ition is more expressive than a in general an interpretation is y singing each recurring phrase way. Planning the interpreta-t the variety will not be too too much out of place in the d but so that it will give new shades to the music is a great elightful task for any singer.

The Song Texture

he many other beautiful de-song that ought to be noticed ger we must speak a passing it texture. Composers work songs until every note is in its If too many notes are played ier in the lower octaves of the accompaniment sounds dull and too high, the music seems ic-box-like, unstable; if there is a wide unfilled space between the upper and lower notes, the gap seems large enough to be jumped through. When a singer finds a composer of merit writing music with distorted textures of types like these, he may be certain that there is an expressional reason and, by discovering the reason, he will know what color his voice must take. In most songs the notes will be neatly spaced so that the richness, thinness, heaviness, lightness, demanded by the mood will be felt clearly. Every singer knows immediately whether a composer writes well for the voice. If he also recognizes the signs of good texture in the accompaniment, he may let his melody rest confidently on a solid musical foundation, or caress the piano tones among which it is moving, or provide an under-song for a sparklingly brilliant accompaniment.

Nothing has been said in this article about the many questions of vocal technic that enter into the proper singing of a song, but the omission does not mean that these are not important. They are very important, but every singer recognizes the importance of good singing in song interpretation, and it is unnecessary to stress it now. Most singers do not recognize the necessity of studying carefully the poem and the accompaniment. The suggestions given here are presented to show why the real student must know the song in all its parts if he is to interpret is as it should be interpreted and to enjoy it as it may be enjoyed.

A Clouded Voice

By Jean McMichael

NEVER take ice cream or an ice cream soda before singing or before a lesson. You will find this clouds the voice and does not allow the full voice to come forth.

Ice cream has on the voice the same effect that a London fog has upon a street lamp, its brilliancy is clouded, while only a flicker of its real power is discernible.

Frantz Proschowsky
SEVENTY-FOUR RIVERSIDE DRIVE
NEW YORK
Author of
The Way to Sing
(C. C. BIRCHARD & CO., BOSTON, PUBLISHERS)

DEAR MR. PROSCHOWSKY—
Let me express my appreciation of your thorough understanding of the *True Art* of singing and the intelligent simplicity of your elucidations, through which I have been able to discover and use new beauties in my own voice. I commend to you those artists and students who seek the truth in singing—the beautiful and lasting art of *"Bel Canto."*
Gratefully yours,
AMELITA GALLI-CURCI.

MY DEAR PROSCHOWSKY—
I am happy in expressing my admiration of your method of instruction. Having heard your pupils, I frankly state that besides the perfect placing of the voice their diction was clear. This secret is a sure success.

ALFRED WOOLER, MUS. DOC.
SUITE A. 171 CLEVELAND AVENUE, BUFFALO, N. Y.

It takes so little room

and it costs so little, too—this charming golden-toned studio piano

IT is amazing that such beauty of tone and such full-rounded volume can come from so small an instrument. Until you actually hear the Wurlitzer Studio Piano you wouldn't believe it possible.

Gives clear, full-toned reproductions of any standard music roll.

Wurlitzer has made this exquisite little instrument every inch a real *piano*—nothing extra, nothing omitted. In total width it's only a trifle over the standard 7⅓ octave scale, and in height only 3 feet, 8 inches. Yet, in that compact space the famous Wurlitzer golden tone has been retained, from the lowest note to the highest.

The development by Wurlitzer of this perfect, small piano has been a godsend to thousands of music lovers. In small apartments, in studios, in small homes, for practice and pleasure, this Studio Piano is filling a long felt want. And its price puts it in reach of everyone—$295.00 and upward. There are Studio Players, too, at $445.00 and upward. Prices F. O. B. Factory. Your Wurlitzer dealer will gladly arrange convenient terms.

SUMMER MASTER SCHOOL

June 28 to August 7, 1926 (40th Season)

MME. DELIA VALERI
World-famous instructor of the Voice, Repertory Teacher's and Auditor Classes. Available for instruction from June 1 to July 20.

HENIOT LEVY
SILVIO SCIONTI
Brilliant pianists and eminent instructors. Repertory and Teacher's Classes.

KARLETON HACKETT
Distinguished vocal instructor and critic. Repertory and Teacher's Classes.

JACQUES GORDON
Famous violin virtuoso and Concert Master Chicago Symphony Orchestra.

HERBERT BUTLER
Eminent teacher of the violin.

WILHELM MIDDELSCHULTE
One of the world's greatest organists.

JOHN KENDEL
Noted authority on Public School Music.

Faculty of over one hundred artist teachers

Special Summer Courses for Supervisors of Public School Music *O. E. Robinson, Director*

Special Summer Courses in Dramatic Art, Expression *Walton Pyre, Director*

School for Theatre Organ Playing
Frank VanDusen, Director

Special Summer Courses in Musical Theory
Arthur O. Anderson, John Palmer, Leo Sowerby

Lectures by eminent Educators, Recitals by distinguished artists

FREE SCHOLARSHIPS

Mme. Delia Valeri will award two free scholarships to the most talented and deserving students. Apply for application blank.

Superior dormitory accommodations.
Rates of tuition moderate.

CREDITS will be given for summer courses taken, toward Certificates, Diplomas, Degrees—granted by authority of the State of Illinois.

Summer Session prospectus, regular catalog and Public School Music circular mailed free on application. For detailed information address

Some Fundamental Principles of Breathing

By Mr. Walter L. Bogert
The American Society of Singing Teachers

OICE Production the breath is at notive power and support.
ungs are spongy, elastic bodies activity of their own.
breath is provided through the n are controlled by the muscles on.
are two sets of respiratory e for inspiration, and the other ion; twenty-two or more in all. principal muscles of inspiration iaphragm, and the intercostal at elevate the ribs and evert borders. (The diaphragm is le of expiration).
chief muscles of expiration are ets of abdominal muscles and stal muscles that depress the

ordinary act of expiration is sive, the resilience of the ribs sticity of the lungs being suf- roduce it.
ie vibration of the vocal cords, nate the tone, and the continua- s vibration, depend entirely on and as the breath depends on nd respiratory muscles, it fol- t is of the greatest importance ngs be in a healthy condition, piratory muscles be strong, and the control of the singer; for astery of the motive power, all vailing.
chieve this control as quickly physical exercises, apart from e necessary for the developing thening of the entire breathing Such exercises have also a e in building up the general possession of which is an es- the successful singer.
rder to give the lungs the great- freedom to expand, the chest held erect to a condition of without strain.
the bony structure of the chest suspended from above, being o other bones at the neck, and back, and as it is free and unattached below, the greatest motion, during respiration, should take place about its lower portion, where there is the greatest freedom.

12. Therefore during singing, if the chest is held erect and buoyant, the point of greatest motion, caused by breathing, should be in the region of the diaphragm.

13. The control of the breath would most logically and most naturally be accomplished by the control, independently, of the muscles of inspiration and the muscles of expiration, or by a balancing or opposition of one set against the other.

14. No attempt to control the breath should be made at the larynx.

15. In general, no action of the breath mechanism should be allowed which would tend to produce interference with the voice mechanism.

16. Perfect control of the breath means:

(a) Ability to fill the lungs to their capacity either quickly or slowly;
(b) Ability to breathe out as quickly or as slowly as occasion demands;
(c) Ability to suspend inspiration with the throat open, whether the lungs are full or not, and to resume the process at will, without having lost any of the already inspired breath;
(d) Ability to exhale under the same restrictions;
(e) Ability to sing and to sustain the voice on an ordinary breath;
(f) Ability to breathe quietly as often as text and phrase permit;
(g) Ability to breathe so that the fullest inspiration brings no fatigue;
(h) Ability so to economize the breath, that the reserve is never exhausted;
(i) Ability to breathe so naturally, so unobtrusively, that neither breath nor lack of breath is ever suggested to the listener.

Roosevelt Loved Bird Songs

By S. A. Griscom

Roosevelt visited England on his n his hunting-trip in Africa, he ıy with Lord Grey, (then Sir rey, British Foreign Minister) o gave themselves up to a long- ay in the woods to study Eng- ngs.
v a little essay by Viscount allodon, tells of the experience. ı our walk," says Lord Grey, a song was heard I told him of the bird. I noticed that as mentioned the name it was un- to tell him more. He knew ird was like. It was not neces- m to see it. He knew the kind was, its habits and appearance. nted to complete his knowledge the song.
, too, a very trained ear for s, which cannot be acquired ving spent much time in listen- n. How he had found time in life to acquire this knowledge hly it is almost impossible to ut there the knowledge and ıdoubtedly were. He had one ost perfectly trained ears for that I have ever known, so ee or four birds were singing e would pick out their songs, each, and ask to be told each separate name; and when farther on we heard any bird for a second time, he would remember the song from the first telling and be able to name the bird himself.

"He had not only a trained ear, but keen feeling and taste for bird songs. He was quick to express preferences, and at once picked out the song of the English blackbird as being the best of the bird songs we heard."

If Papa Rossini were alive he would have a great time with all the devices for the development of that dear human instrument—but he would be persuaded that, although "voice, voice, voice" is all right, it depends absolutely and entirely on other physical, mental and artistic qualities to put that voice to good use."

—Buzzi-Peccia.

JAZZ Axel Christensen's Instruction Books for Piano. Hands always dry and comfortable — ready to play their best

Use Odorono, a sure, safe corrective for annoying perspiration. Send for sample

Perspiration of the hands is annoying enough for anyone—but for a musician it is a really serious condition. For hands wet and cold with perspiration cannot be as supple and sure as they need to be, to play well.

Medical authorities say that this unfortunate condition is usually a result of nervousness and that it can and should be corrected by local application. It was for this very purpose that a physician formulated Odorono—now recognized and used by physicians and nurses everywhere as the one scientific corrective of all perspiration trouble.

Odorono is an antiseptic toilet water which, applied twice a week will keep the palms, feet and underarms dry under any conditions of heat or nervous strain.

Just a light, quick application of Odorono several hours before playing, and you will have no further trouble. Warm, dry and comfortable, you can be unconscious of your hands; safe from all worry and distress.

Millions now use it as their safeguard against underarm odor

Odorono is a corrective of the unpleasant odor of perspiration as well as excessive moisture. It is the one adequate means now used by millions who understand that underarm odor cannot be destroyed by the most painstaking soap and water cleanliness.

One application and the underarms are dry and odorless for at least three days! No ugly stains on clothing, no taint of repellent odor! Get the twice-a-week Odorono habit; it will bring you complete assurance of comfort and perfect grooming. At all toilet counters, 35c, 60c and $1.

Send for trial bottle —only five cents

THE ODORONO COMPANY

A Summer Session

Beginning June 21st

Length of course arranged to suit individual convenience

Study

~at an amazingly low cost, averaging $150 or less for a full course of study under master teachers

Master Classes

Master Classes in Piano, Voice and Violin, conducted by renowned artist teachers, at so low a cost as to be within reach of all.

Classes in Teaching Repertoire, Music Pedagogy (Normal), Public School Music, Harmony, Counterpoint, Composition, History and Appreciation of Music; Accompanying, Ensemble Playing, Sight Singing, Orchestra Conducting, Choral Conducting, Dramatic Art, Dancing and Languages; a special course in Community Music, and another in Motion Picture Organ.

Teachers' Certificates may be earned by completion of prescribed Courses.

Private instruction available from the entire Faculty of more than one hundred instructors, in any subject desired.

Dormitory accommodations provided at moderate rates.

Vacation

All the good times of a real vacation along with the advantages of summer study

Eight Vacation Excursions

All the good times of a real vacation can be enjoyed in a series of eight vacation excursions, conducted by the School. The schedule includes: 1. An automobile trip through the Chicago Parks, concluding with a visit to the studios of the famous sculptor, Lorado Taft. 2. A visit to the Art Institute. 3. Capitol Theater Party. 4. A visit to the Field Museum. 5. A boat ride on Lake Michigan. 6. A visit to Newberry Library and the Chicago Historical Society. 7. A visit to the Chicago Tribune, to see the printing plant, the great Radio Station WGN, and the Observatory Tower. 8. A journey in chartered car to Ravinia Park. Picnic supper in the Park. *Opera in the evening with Metropolitan and Chicago Opera Company artists.*

Free recitals will be given every week by artist teachers of the School.

Opportunity

~for professional advancement

Teaching Positions

The Sherwood Music School now has Thirty Neighborhood Branches in Chicago. These Branches give rise to positions for advanced students and teachers who wish to teach and at the same time continue their study under our artist teachers. There are also excellent positions available for our students, when qualified, in the thousand and more Branches of the School, located throughout the country. *Additional teachers for the 1926-27 teaching season in the Chicago Neighborhood Branches will be engaged from those in attendance at the Summer Session. The number of openings is so large that any talented, ambitious student or teacher, with reasonable preparation, may be sure of an opportunity in our organization.*

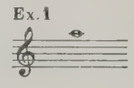
Question and Answer Department

Conducted by

ARTHUR DE GUICHARD

Intervals.

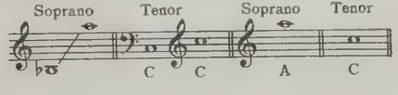


Q. i. What is an interval? ii. How are intervals counted? iii. Is not C♯ to B♭ a major 6th? To me it looks very like a major 6th in the key of F♯.—LE FOLEY, PARADE ST.

A. i. An interval is the difference in pitch between two notes. ii. Intervals are counted by the number of names of notes contained, upwards and inclusively, for example: D♯ to G♯ is a 4th, because from D♯ to G♯ there are four names of notes, namely, D, E, F, G. The sharps or flats change the interval only in kind; the letter-names give the degree of the interval. C♯ to B♭ is a diminished 7th. Count the names: C, D, E, F, G, A, B, seven notes. Therefore a seventh. Now for the kind of seventh: we know that C to B is a major 7th; flat the B and we have a minor 7th; now make the interval a semitone smaller by raising the C to C♯ and we have a diminished 7th, that is, one semitone less than minor. If you wish to make this interval a major sixth, you must call the B♭ an A♯, thus giving only six names of notes: C, D, E, F, A.

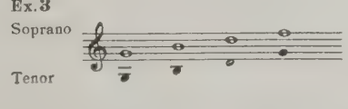
Women's Voices and Men's Voices.

Q. My voice is a soprano and my brother's is a tenor; I can sing only up to A



Ex.1

while my brother can sing a good high C. He makes fun of me constantly, taunting me for not being able to sing as high as he can. Now I have read somewhere that a man's voice is (sounds) an octave lower than a woman's. If this be so, then his range of voice is much lower than mine, and so it sounds. Will you kindly explain and say who is right?—JEANNE, BROOKLINE, MASS.



A. You are quite right. Here are your voices with their absolute pitch.

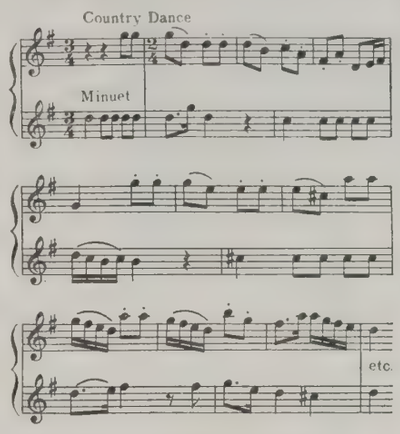
Ex.2

Many persons make the same mistake, which arises from the fact that, in the matter of songs, tenors and sopranos are accustomed to read their melodies in the G clef; so that many tenors think that their high C is the C above your A, whereas they are really singing the third space, treble clef, C. It is utterly impossible for a tenor voice to sing your A. Please remember that man's natural voice is pitched and sounds one octave lower than a woman's voice. When you sing together, the effect is

Ex.3

Thus he could not sing your high C (except, perhaps in falsetto), nor could you sing his low C.

A Doubly Dotted Note.



Q. What is the meaning of a note with "two dots" after it, namely:  ?

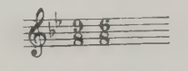
A. The dot after a note (or rest) increases its value by half; and the second dot increases the value of the first dot by half; therefore the value of the two dots is equal to three quarters of the principal note, or 

A Combination of Different Times: Duple and Triple.

Q. In my copy of the last act of "Don Giovanni," I see that Mozart gives a country-dance in 2/4 time, accompanied by the well-known minuet in 3/4 time. Which are the accented notes? and what kind of music would you call this? Do time combinations of this kind often occur?—E. BLANCHARD, BRIGHTON, MASS.

A. This species of music, in which binary and ternary divisions of time occur simultaneously, is termed polyphonic and polyrhythmic. Combinations of these divisions are met with frequently. A familiar example, with 3/2 against 6/8 is that in R. Wagner's *Twilight of the Gods*. The rhythmic accents occur on the first beat of each measure in both divisions. The following excerpt is from the *Ball Scene* in the finale of the second act of "Don Giovanni."

Music, or Musical Sound; Fundamental Elements.



Q. In the course of my teaching, I am frequently asked to state what are the essentials of music, as opposed to noise; that is, what are the basic requisites, the indispensable properties of a musical note: of music, in short? I have never yet been able to give a concise, complete description. Will you kindly assist me as briefly as may be?—O. P. Q., TEACHER.

A. *Sound* is the starting point. Sound is caused by vibrations imparted to the air by any sonorous body; these vibrations are known as air-waves. When they are uniform and regular the resultant sounds are *musical notes* (all others are noises).

The essential features of a musical sound are *Timbre* (quality), *Intonation, Intensity, Duration* and *Accentuation*. Timbre is the special and particular sound which a voice or instrument possesses to the exclusion of any other: a man's voice, a woman's, a child's, a flute's sound, an oboe's, a double-bass and so forth. Intonation is applied to difference of pitch, high or low. Intensity is the degree of the note's strength, or volume. Duration is the relative length or brevity of a sound. Accentuation is the stress or emphasis with which the notes are attacked and upon which rhythm depends. These are the primary essentials of music: develop them for the benefit of your pupils.

A Movement with Two Time-Signatures.

Q. What is the meaning of two time-signatures at the beginning of a composition, such as

in Foote's "Impromptu in G minor"?—A. J. H. CENTERVILLE, S. D.

A. It is so written to indicate a regular alternation of ternary and binary divisions of time (that is: 9/8, ternary or three ♩. beats to a measure, and 6/8, binary or two ♩. beats in a measure. In both time, ternary and binary, the beat is of the same duration, namely, a ♩. = 69. An examination of the piece shows that the first twenty-eight measures are in G minor, and that the time proceeds by alternations of three measures of three beats each and one measure of two beats. This alternation continues for the entire minor movement. Then there is a change into the tonic major of G. The whole of this major of twenty-five measures is in the 9/8 ternary time. Indeed, when the G minor signature is changed to G major, the 6/8 sign should be omitted. A return is then made to the tonic minor, G, with the original 9/8—6/8 time for twelve measures, on the last chord of which occurs a pause (𝄐) and a final seven measures, all in 9/8 time. Remember that, throughout the piece, each beat is made up of three eighth-notes. If the double time-signature were not given at the beginning of the movement, it would be necessary to place a 6/8 signature at every fourth measure of the minor.

The Organist's Etude

Edited by Well-Known Specialists

It is the Ambition of THE ETUDE to make this Organ Department "An Organist's Magazine Complete in Itself"

Recital Playing

By H. C. Hamilton

THE ORGAN has been designated the King of instruments, and certainly comprehensiveness and variety are to be met with here in a degree to which no other single instrument can even approach. From the border land of silence, gradually adding its multifarious tone-colors, in an ever-increasing intensity of volume till it rivals the crash of thunder, the organist, from the resources at his command, evokes most varied effects, from the bewitching to the awe-inspiring.

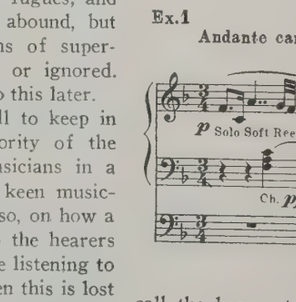
But it is only the artist of consummate skill, and still more consummate taste, that will not abuse this wonderful box of colors. His playing will be tinted with some glorious hues, but the etching and shading will be also present. It is in these latter respects that so much recital-playing falls short. As far as tone-color on the organ is concerned, any person can, by drawing a stop and depressing a key, obtain the same fine tone as the greatest player living. Probably it is for this reason—that so much variety can be obtained by merely mechanical means—that the trifler and day-dreamer, finding, as he imagines, so many things ready-made for him is content to revel in the organ builder's art, and neglect real self-improvement. His playing degenerates into sentimental slush, or the hurdy-gurdy and steam calliope style, according as his taste (or lack of it) dictates. His foot work is slovenly, frequently incorrect, and always interminable. "Fancy" stops are in evidence, till we suffer from tonal nausea. And the most hopeless feature of the situation is, that he imagines he can play!

It is this kind of public infliction that brings the organ into such general disrepute as a solo instrument. The same thing would be true of the piano, from the way it is often maltreated, were it not for the fact that the pianistic art is, in other quarters, on a gratifying high plane, and we have the opportunity of hearing genuine artists so frequently.

But how often do we hear artists on the organ of the calibre of a Paderewski? Some might question whether there be any such. There are to-day, nevertheless, organists who are real artists; though perhaps not so many outstanding names are to be found as among pianists. Certainly, those who hear the organ handled as only a master can, will realize their misfortune in not being able to listen oftener to such a magnificent performance.

For those who are ambitious to elevate the taste for organ music in their community, and are willing to work toward that end, the following suggestions may be of interest.

Choice

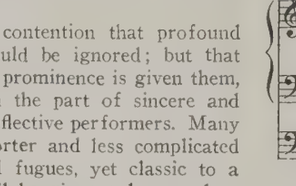


IN PREPARING a recital, the choice of pieces will be the first consideration. The examination of a long list of programs of this kind indicates that, while, from the standpoint of merit, every item is of the first class, taken as a whole, they are, in many instances, incomprehensible to the average hearer. Sonatas, fugues, and other selections of this type abound, but many classic gems—real gems of superlative beauty—are overlooked or ignored. More reference will be made to this later.

In choosing pieces it is well to keep in mind the fact that the majority of the average audience are not musicians in a technical sense, though often keen music-lovers. It is well to reflect, also, on how a selection is likely to appeal to the hearers—many of whom, probably, are listening to it for the first time. How often this is lost sight of, is a cause for astonishment. An organist practices a piece until he is thoroughly familiar with it and learns to enjoy many parts, which were vague at first, even to himself. He is eager to present it in public, and considerably disappointed when he fails to arouse much interest, having seemingly forgotten that some things have to be heard often to be understood.

It is not my contention that profound masterpieces should be ignored; but that sometimes undue prominence is given them, and generally on the part of sincere and talented, but unreflective performers. Many compositions, shorter and less complicated than sonatas and fugues, yet classic to a degree, could well be given a larger place on our organ programs. An entire sonata or symphony, thematic development, or anything constructed along these lines, has to be received by the intellect as fully as by the emotions. Unfortunately, it is a fact, that people do not want to over-work—least of all at a concert. It is the custom to-day, and no doubt a good one, to speak of entertainments as being "educational," but, after all, people want music that will give pleasure. No matter how "advanced" they are to-day, they all like a tune, nor need they be ashamed of making such an admission. Many masterpieces are more tuneful than is generally supposed; the contrapuntal interweaving of their independent themes, however, makes a greater tax on the listener's receptive capacity than a "straight tune." Naturally, he will, sooner or later, grow bored and restless. A good fugue, well played, is not without a certain attractiveness, even to the layman, but we cannot expect him to enjoy an evening made up largely of this sort of work. Thematic development he has no passion for, and, while a certain amount should be included in every good recital, a speedy change to something different is appreciated.

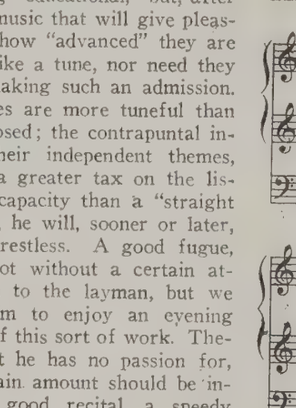
Among some of the things I have found most acceptable on many occasions are the following: *Andante* from Mozart's "Symphony in C major" (*The Jupiter*). This is a gem of crystalline beauty; in fact, one of the most beautiful compositions ever written. If the player wishes to begin his recital quietly, nothing could be better for an opening number. The first few introductory bars of melody, with their impressive silences



Ex.1

call the hearer to attention. The interest never flags during this exquisite creation. It pleases at a first hearing, and it will also bear any amount of repetition.

Another selection splendid for the organ is the *Minuet* from "Symphony in G minor."



Ex.2

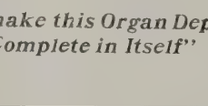
The imitative work is brilliant, scholarly, and singularly fascinating, being in Mozart's best vein. The trio is so graceful and dainty, that its favorable reception, too, is assured.

Still another is the *Minuet* from "Symphony in G major" *(The Military)*:

Ex.3

Haydn, here, almost surpasses himself in tunefulness and light-hearted gaiety. No "jazz" of to-day can rival it, or cast its lustre in the shade. Haydn was one of the most melodic of composers, and has not, to my knowledge, written a more genuinely attractive minuet. The trio, too, exudes a flavor of old-world grace that is as charming as the foregoing is bright and overflowing with Haydn's happy optimism.

These are only three of the many things used in recital, and at times, in church. It will be noticed that all are transcriptions, and were not originally written for the organ. It may seem strange that, of the great masters, only three left work behind that showed their love for the organ: Bach, Handel, and Mendelssohn. The work of each sounds well on the instrument, and should be represented. Much of Bach's lighter music—if one may so term it—is very grateful even to modern ears; his gavottes, sarabands, and so forth. But the short symphonic movements I would especially recommend for earnest study.



Though some organists have a penchant for adapting piano music to the organ, the practice is not always wise. The only guide is whether or not the piece in question "suits." If not, better leave it alone. There is one perfect little organ piece, however, the *Love Song* from Nevi Book," whose style of accomp

Ex.4

as in many such selections, wh on the piano, is inartistic on th little "holding-over" brings more into the realm of organ

Ex.5

The pieces on the recital sho so far as is legitimate, "show" Many listen for tone color, nothing regarding the merits o itself. Special effects, too, such pedal in *pianissimo* movements running work on the manual, th stops, reed and flue work, revea trast, legato and staccato, pedal all should be brought forward natural and unforced way.

Compositions might include fugal number from some of the ters, or possibly an overture tra tender lyric melody, a scherzo, in a minor key, a movement in various dance forms, a fantasi sort (perhaps Lemmen's *Stor* with variations (preferably son miliar) and a stirring martial These things cover the most of sic. Now as to the next consid

Arrangement

THE ARRANGEMENT o gram is very important, to the selections themselves, player's sense of fitness. It arranged in the way we like a din by dishing up the "sweetest" thi last—for it really is a musical During the earlier numbers, itself is largely the attraction; no "fancy" may be demonstrated ti At the same time the openin should possess unmistakably qualities. The question as to open with a loud or soft selecti ginning of a selection) is des thought. Personally, I prefer method, and I believe many share People may not mind startling (at times), but they rarely relis den crash with which many p accustomed to begin. Moreover, to keep the full power of the or serve in order not to blunt the pleasurable excitement later building up a mountain of sound

Special effects, too, are to be till their entry is emotionally an demanded, taking care meanwhil sameness in two consecutive pie rarely should two selections in key, especially in the minor mode in succession. Also, keep well a pieces as resemble each other in time, tempo, style, registration

As a rule, too, any choice from masters is generally best on the of the program. The intrinsic m music itself is its chief attracti certain amount of time should b that alone. This may well be t educational part of the program modulation, and bizzare or ear-ti fects are not so much in evidenc with more modern schools.

As the recital proceeds the ear rally desire something new in th style. "Fancy" stops may judiciously introduced; and prog sic, music which tells a story, may assert itself. Many dearly love of composition, and so long as it music—not tawdry clap-trap—it

place. Two classical examples here be cited: *The Brook,* from en's "Pastoral," and Mendelssohn's Symphony," with its unmistakable effect.

ir with good variations may well lf a place near the end of the pro- To many this is an unmixed treat l be longest remembered. If the nt of the theme is artistic, great nal value will not be wanting even But all things nearing the close of tal should be "transparent" for the strong rhythmic number as a close hing with an exhilarating and irre- onward movement—will stir the at weary listeners as they find the f the music and their own beating rd. Guilmant's "Grand Chorus in makes a magnificent finale.

Presentation

PRESENT each number under most auspicious conditions will a good deal of thinking, and often, ing. When the pieces have been ly grouped, and their order finally upon, the registration of each will tention. To take a piece, with inted registration, as so often and play it verbatim on each and rgan, is a procedure that will cer- ot commend itself to the organist . Nothing in the way of musical nts differ so much as do organs, y a recitalist has found to his when, with limited time at his , he has had to preside at a strange Every stop should have its indi- rial first, and the quality and vol- refully noted. Combination will in order, till all that is possible in ard has been committed to mem- any note in either manual or pedal l undesirable, some way should be o avoid it, as one bad note—espe- it is frequently made use of—is to mar the beauty of an entire Sometimes a transposition is the edy, if there be time to make one- e of it in the new key.

should be kept in mind the neces- having in each number the element ty and surprise, by the avoidance ious characteristics, still fresh in tor's mind. If one number has ex- largely a feature of heavy continu- al, an emotional lyric number, with dance of heavy bass, or a dainty novement, with a sparing use of ccato pedal, and in a new key, will ful to the ear. An Oboe or Vox solo in one number should not wed at once by something in which ne tone-quality is heard again. time should always intervene, so the re-entry of the same stop is re desired (as form in registration calls for) its second advent will ngly and psychologically timed. uld never be forgotten, moreover, tinual use of the full organ wearies the ear, and is difficult to follow in a melodic sense. The surge and crash of tone is stimulating, especially the climax of a cleverly worked-up *crescendo,* but once the apex is reached, the ear soon desires a change. Especially should one be sparing of the super-couplers during full organ.

Changing Registration

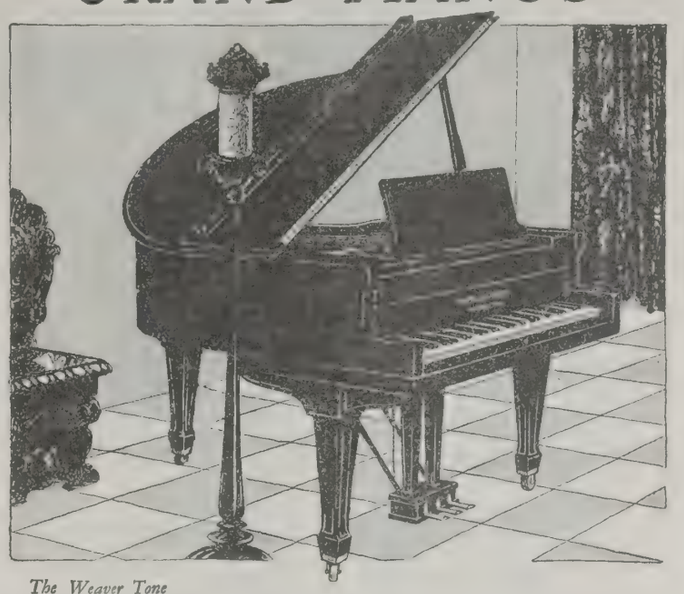
IT SHOULD not be necessary to add that changes in registration should never be made during the holding of a chord, but this is a sin still occasionally committed. The most rational place to make such changes would be between phrases, strains, and so forth. Resolutions, too, should be consummated as far as possible. Sometimes pieces come under one's notice where even the composer or arranger seems to have forgotten this; crude "breaking-off" points are being met with; possibly a dominant seventh of G in the third inversion, with the lowest C of the pedal in use. Then, as its natural note of resolution cannot descend any lower, a skip upward is made to the pedal B above. The musician is not a slave to the printed page when such things show themselves. Adherence to real musical feeling, if nothing else, should prevent such crimes.

Again, it never sounds well to leave an unresolved harmony on some loud combination, and change to the chord of resolution on something so soft that the previous dissonance is left, as it were, hanging in the air. A reversal, dynamically, is not objectionable, however. Such things, too, as doubling the bass of the dominant seventh in the last inversion, and the bass of the major chord in its first, had better be avoided.

Regarding keys, it will be noticed that the key of the dominant following the tonic produces a bright effect, while the sub-dominant used in this way makes anything sound as if in a mellower vein. I have often kept these things in mind in presenting one piece after another, according to the atmosphere wanted, even to the extent of transposing, if the sequence of keys were unsuitable. Keys of second relationship following the tonic, of course, produce more sudden and out-of-the-way changes, and may advantageously be employed for such ends.

In short, a successful recital must "sound well." Magnificent organs are to-day so generally used that a recital which is a "bore" can usually be laid at the door of the recitalist. To one of taste and skill the modern organ becomes a vast treasure-house. Many hidden beauties are waiting to be brought into the light. He will discover and classify these, and will not allow the organ's weaknesses (should any be found) to be exposed. He will *make* people love the organ, whether they feel so inclined or not, through his own love for it, and through the bringing forth from this modern Aladdin's cave "treasures both new and old."

Music for Everybody



Archbishop of Canterbury, addres- conference of clergy, organists and sters in the Canterbury Diocese at ury on November 7th, said the music in church worship was as nt a subject as any in the discus- n Prayer Book revision. It was ch concerned everybody in Church who took part in public worship. not concern musical people only," is Grace, "I am a most unmusical myself." The Archbishop re- that formerly it was thought that y qualification for a choirmaster anist was that he should under- usic. His work was supposed to most mechanical nature. To-day was altered. We realized that the ster and organist must be a musician and something more. He must understand Church services and their meaning, and must be a servant of the congregation, and not merely of the choir and those attending. —*Musical Opinion*

"Music," says Sir Landon Ronald, "is a necessity. And when you come to think of it, modern music is very like necessity—which knows no law."—*Glasgow Evening News.*

THEATRE ORGANIST'S SECRETS

EVERY PROGRESSIVE ORGANIST should have this complete course in trick and imitation playing. Contains detailed instruction for producing Dog-bark, Snore, Rooster-Crow, R. R. Train, Bagpipes, Banjo and over twenty other effects indispensable to the motion-picture organist.
Price Two Dollars postage prepaid

ng chart showing the original eleven lines, and the placing of within its compass, may be of rest to you:

ss Tenor Clef | Alto Clef | Soprano Clef | G or Tenor Clef

ear in mind that when the So- Tenor clef is used the clef sign MIDDLE C, you will be able ertain what notes are to be Soprano Clef is probably very d for practice in reading Alto fs we would suggest "Daily Organ," by Dr. Ralph H. Bel- in "The Enoch Organ Library."

Contralto? What is Baritone? Soprano and Alto stand in a

o is the lowest of the three ties of the female voice (*Alto E* voice of the highest pitch— called also counter tenor). Baritone, as used in connection with the voice, indicates a high bass. In the placing of the quartette, the Tenor and Soprano and the Contralto and Bass should stand together—as per following diagram:

Tenor Soprano	Contralto Bass
Congregation	

The above indicates the proper placement when they appear as a quartette. If singing in the chorus, each quartette voice may be placed with his or her respective department of the chorus, each acting as leader of that department.

Q. In playing a march on the organ are the first and third beat staccato—as

ta ta ta ta
1 2 3 4

or are all beats staccato or slightly detached?

A. We cannot advise any set rule in this matter—different marches requiring different treatment; for instance, in Elgar's "Pomp and Circumstance" march, the sweeping melody comprising the middle section requires a marked *legato*—staccato being decidedly unsuitable for the passage. In a march set to 4/4 time the natural accents are on the first and third beats; and if they are to be emphasized by detached notes, the fourth and second counts should be the detached ones, the period of rest after these beats serving to emphasize the entry of the first and third beats which follow them.

Q. I would like to have some information regarding the pipe organ. I notice sometimes in removing certain stops that they make a rather rubbing noise when taken off. Can you tell me the cause and is it anything that is harmful to the organ? How often should an organ be tuned and cleaned? Also can you advise me as to some books that would be helpful for me to read regarding the care of an organ motor, the mechanism of the organ, and the care of the organ in general; also some books on registration? Can you use the tremolo too much for the good of the organ?

A. The "rubbing noise" you mention may be causing some unnecessary wear and we would advise your consulting with some good organ mechanic, preferably one representing the builder of your organ. Unless your organ contains reed stops, tuning it twice a year will probably be sufficient. We would suggest your having a yearly contract for the care of the organ, with visits twice a year—early in the fall when fires are started, and in the spring. We would suggest that this arrangement should also be made with a competent organ mechanic representing the builder of the organ, if possible. We cannot suggest a book of instructions for care of the motor. Perhaps the representative of the builder in your locality, or the builders of the organ can give you suggestions for the general care of the motor; and special attention might be secured from the man caring for your organ regularly, or a motor expert in your home town. Would suggest that you write to the builders of the organ for information as to literature pertaining to the mechanism and general care of the organ of the particular make you play. In reference to books on registration, we would suggest:

"Organ Stops and their Artistic Registration," by Audsley.

"A Primer of Organ Registration," by Gordon Balch Nevin.

Frequent use of the tremolo would scarcely be harmful to the organ, except the resulting wear on the tremolo mechanism. Too much use of the tremolo is not, however, in good taste, from an artistic standpoint.

Q. Will you please suggest some four-hand pieces for two manual organ, grades two or three, and how to use the following stops for best results:

Swell	*Great*
Dolce	*Open Diapason*
Viole	*Dulciana*
Stopped Diapason	*Viola*
Flute	*Gedeckt*
	Flute

A. Compositions for organ—four hands—are very limited in number. The following list may be of some help:

Variations on the "Sicilian Hymn," Eugene Thayer.

Variations on "Nuremberg," Eugene Thayer.

Variations on "Auld Lang Syne," Eugene Thayer.

Fantasie in D minor, Hesse.

Festintrade, Volckmar.

Sonata, Merkel.

We strongly suspect from your list of stops that your organ is built on the Duplex plan; that is, that the same pipes are used in both manuals except the Great Organ Open Diapason, which does not appear in the Swell Organ. Our suggestion is that you secure a copy of *A Primer of Organ Registration*, by Gordon Balch Nevin, and study it carefully, especially chapters III, IV, V and VI. In preparing your organ numbers, try different ways of registering, and use that which seems best adapted to the limited number of stops at your disposal.

The Violinist's Etude

Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

Re-Hairing Bows

MANY people write to the VIOLINIST'S ETUDE seeking instructions for re-hairing their bows. This information can be obtained in the little work, "The Violin and How to Master it, by a Professional Player;" and the directions are as clear as can be made in writing. However, I would advise against the violinist and violin student trying to re-hair their own bows; for it is a very difficult and tedious operation for one who has not had much experience. I doubt if there is one professional violinist out of fifty who re-hairs his own bow. The late Eduard Reményi, the famous Hungarian violinist, when he was touring the United States, used to send his bows all the way to Paris, by express, to be re-haired. Asking him why he did this, he told me that he could not find any one in the United States who knew how to do a perfect job of re-hairing. He was wrong, of course, but it showed the importance he attributed to a perfect job.

In re-hairing, the problem is to have the hairs run in perfectly straight lines, with the same tension throughout, and to arrange so that the hair will be of the proper length from frog to tip, so that when unscrewed the hair will be loose, and that it will not be too long for it to be screwed up to the proper tension for playing.

Some amateur re-hairers glue in the hair, which is an abomination, and spells trouble for the next time the bow must be re-haired. Others get the hairs crossed and of unequal tension. The most common fault is to get the hair too short or too long, and people who try to re-hair their own bows often have to make several trials, spoiling a hank of hair each time. As a good hank of hair costs at retail about fifty cents, this makes it an expensive proposition when the re-hairing does not come out well.

The hair must be first wet and then carefully combed before it is put in. The little wedge which holds the hair fast, must never be glued in.

Altogether it is by far the best policy to get a skillful repairer to put the hair in, for the amateur, trying to do it for himself, cannot possibly succeed in doing even passable work until he has re-haired fifty or a hundred bows, and some never seem to acquire the knack.

Most amateurs and students do not have their bows re-haired often enough. Worn out bow-hair is as bad for violin playing as a dull razor for shaving. The student who practices an hour a day should have his bow re-haired at least twice a year, and oftener when he practices more than that length of time. A professional who does much, and very hard playing, gets his bow re-haired at least once a month. There is nothing like fresh bow hair for pulling out a fine tone.

Do You Know

THAT the first British Army Band to leave its own country was the Grenadiers Band which came to the United States in 1872, to play at the Grand International Peace Festival at Boston? This was also the first time since the American Revolution that a British soldier appeared in uniform in our country.

That an old manuscript in a Parisian library contains an illustration showing Heinrich von Meissen, a minnesinger who died in 1318, conducting a choir of singers and players? He is seated on a raised platform and is conducting by means of a long baton in his left hand and one extended finger of his right. His attitude and expression clearly indicate his intention to guide those below him or to correct some one who is going astray.

A Study in Position

HERE we have a perfect playing position, correct in every detail. Note the attitude of easy grace. The whole position is one of dignity and freedom. The right wrist has just the correct position, and the right hand is gracefully rounded, with the fingers held on the stick of the bow in a comfortable position, not closely squeezed together, nor straggling far apart on the stick, as is often seen. The stick of the bow is exactly parallel with the bridge, and at right angles to the strings. In this position the hair pulls squarely against the string, getting the maximum of vibration and purity of tone. The hair lies on the string, midway between bridge and the end of the fingerboard, where it should be used in *mezzo-forte* playing (ordinary tone, neither loud nor soft). The stick of the bow is inclined towards the fingerboard, making it possible to use only the edge of the hair for very soft passages, or more when required, by increasing the pressure, as a louder tone is desired.

The left elbow is held far under the violin, which throws the left hand well above the fingerboard, so that the fingers will fall perpendicularly on the fingerboard, on their tips. The crease where the fingers join the hand comes even with the edge of the fingerboard.

The head of the violin is held high, with the scroll considerably higher than the tailpiece. This position insures more sonority of tone than would result if the head of the violin were held low with the back of the violin pressing against the body of the performer, thus checking its vibrations to a certain extent.

The violiniste's head inclines slightly to the left, bringing the jaw on the chin-rest in the position best suited for holding the violin. So many violinists make the mistake of placing the point of the chin on the chin-rest, with the head inclined to the right. This position is not only strained and awkward in appearance, but it precludes holding the violin well.

Note the pleasing expression of the player's face, with just the hint of a smile—a very important element indeed in creating a good impression on one's audience. She seems to be listening with delight to the tones of her violin. So many violinists lack a good facial expression when they play in public. Some frown, some compress the lips, or keep the mouth open, while others make all sorts of grimaces, to the vast amusement of the audience. Almost every young violin student, just commencing to play in public, has some disagreeable little mannerism which detracts from his performance. A pleasing facial expression is a prime element for success in public violin playing.

Hints on Repairing—Part III

By Otto Rindlisbacher

THE saddle is usually of ebony. It must be glued in and fit snug. Its height is regulated by the height of the bridge and the bulge of the top of the violin. Suffice it to say it should be high enough to clear the tailpiece from the top.

In many instances a very small crack in the top will be noticed, starting at the end of the saddle. This is caused from weather conditions and shrinkage of the top, especially in the newer violins where the wood has not been thoroughly seasoned. Unless remedied, th

ly fill a crack with glue with-
the parts tight. The glue
lry and fall out, leaving the
e more difficult. If the crack is too wide, it must be filled with wood and usually reinforced from the inside. Closing a wide crack by force is very apt to affect the vibration; and if the parts are warped it may loosen in a very short time.

Poor tones or rattles are sometimes caused from the inside—loose bass bar, lining, or blocks. This, of course, must be left to the repair man. Neither should staining or varnishing be attempted by a novice, as this is very particular. Many a valuable instrument has been ruined forever by the wrong application. There is no remedy, especially where certain ingredients have soaked deep into the wood.

Not the least important is the cleaning of your violin both inside and outside. I have found the best method of cleaning the inside, without removing the top, is to insert a handful of damp rice giving it a careful shaking. This will loosen and gather all dirt and dust.

There are several ways to clean the outside; but, as the varnish is easily damaged, one of the many cleaning preparations on the market, all of which have been proved satisfactory, may be used.

A clean rag, saturated with raw linseed oil, dipped in very fine powdered pumice stone, and carefully rubbed over the violin, will remove the caked rosin and dirt. The violin must then be rubbed perfectly dry.

It is important to keep the violin clean inside and out, both in regard to tone and appearance. And the best way to keep it clean is to "not to let it get dirty." Wipe off the rosin each time after playing.

A list of average charges for repairs such as you can make yourself, follows. This will give you an idea of what a saving you can make.

New Bridge	$1.00 to 1.50
New Sound Post	1.00 to 1.75
New Pegs (ebony)	2.00
New Fingerboard and Bridge	5.50
Glueing cracks from outside.	1.00 upward
Re-shaping Fingerboard	1.50
Other minor adjustments, usually	$1.00 and upward.

Tempering Criticism

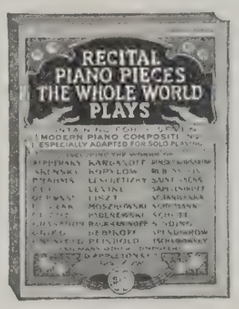
deadening effect on a pupil,
he is slow or possessed of
t.

It is often better to substitute suggestion for criticism in the case of a timid pupil who is easily embarrassed. The good points of such a one should be praised and even magnified, so that he may be encouraged to overcome his timidity.

Keeping a card catalog of each pupil's good and bad points has been highly recommended by successful teachers who find it a great help to themselves as well as to the pupil. It serves the former to keep a record of the work done by the pupil, and the obstacles to be overcome to clear the road to progress, while the latter gets a clear idea of his faults and failings, which is the first step in eradicating them.



Famous Strad Changes Hands Via Bryant

us Du Brouq Stradivarius,
n played for the last eighteen
m Zimbalist, celebrated violin-
en sold by O. H. Bryant, Bos-
d dealer, to D. H. Walton, of
ass. The price is said to be
orhood of $20,000. The Du
ivarius is one of the really
imens of the work of Stradi-
sold by the Baron Du Brouq in 1903 to Hans Wesley, the English violinist and teacher. Mr. Wesley played the instrument until 1907 when it was sold to Efrem Zimbalist, who used it constantly. Mr. Bryant, who is in a position to know fine Cremonas perhaps as well as any authority, says of the Du Brouq Strad: "The Du Brouq Strad, made in 1728, is as fine a specimen of this period as any in existence."—*New York Musical Courier.*

o! He was guilty of many s, but he did not fiddle while urning. How do we know that? Simply because fiddles were not built till many years after Nero's death." HENRY T. FINCK,—"*Musical Laughs.*"

For Pianists of Skill and Taste

Recital Piano Pieces

A compilation of modern masterpieces for those who desire to become familiar with the finest creations of the world's greatest composers. It contains music in infinite variety as regards character and difficulty, the famous composers of all schools being represented. There are also a number of pieces which will prove both novel and interesting. The book contains 256 pages.

Violin Questions Answered

By MR. BRAINE

Starting at Twenty.

L. N.—Ordinarily, twenty years of age is too late to start the violin, with the hope of becoming a violinist in a symphony orchestra. Almost all violin students studying for the profession have their educations completed before the age of twenty. I have known cases where pupils with such a late start have succeeded in acquiring enough technic to play in a symphony orchestra, but such cases are rare. You run the risk of losing valuable time and money in making the effort. However, if you are determined to try, you might enroll for a few months in a conservatory in Boston (which is near your home). In that time your teachers could advise you whether you would be able to become a professional after so late a start.

Imitation Stradivarius.

M. M. D.—There is such an enormous number of imitation Stradivarius violins, that there is not one chance in millions that yours is a real one. You will have to ship your violin to a reputable dealer in old violins, for an opinion, but the chances are that you would go to useless trouble and expense in so doing. You will have to run the risk of being disappointed.

Must Hear Her Play.

A. B.—It would be pure guess work, I am sorry to say, for me to try and decide whether the little girl is working on the proper material without hearing her play. It would be like a physician trying to prescribe for a patient whom he had never seen, and never examined. All the exercises and pieces you name are excellent, but whether they are suited to the pupil or not at this stage I cannot say without a personal hearing. This is where the qualities of a first rate teacher, of giving the pupil exactly the proper exercises and pieces at the right time, are of value. The teacher is the proper one to advise, and, if the pupil is not making the proper progress, the only thing to do is to change teachers. 2.—The pupil should certainly be studying scales and arpeggi at this stage. 3.—While it is much better for the teacher to have a good command of English, some of the foreign teachers in this country seem to get good results, even though they are able to express themselves only in broken English.

Studying Viola.

L. T.—If you already have a good foundation on the violin, and wish to study the viola, it would probably be advisable for you to devote all your practice time to the viola, as you say your time is limited. In a technical way your violin playing will not suffer, since the technic of the two instruments is so much the same. The viola practice will also help the stretching capacity of your fingers.

Plan of Study.

M. F. L.—If you play the exercises and pieces mentioned in your letter really well you have made good progress for the time you have studied, but I could not say without a personal hearing. If you are studying to become a professional violinist, the city where you live is too small to give the proper advantages for musical development. If it is at all possible, you had better study in a large city such as New York or Chicago. Boston would do very well, as it is near your home. You might arrange to study there a few months at first, and in that time your teacher could advise you as to whether or not you have the requisite talent to continue. 2.—By all means study theory, harmony, solfeggio, counterpoint, musical history, and, above all, the piano, as well as the violin.

Appraising Violins.

L. M. G.—Any of the violin dealers who advertise in THE ETUDE could appraise your supposed Stradivarius violin for you.

T. E. P.—The label you send is evidently part of the label of an Antonius Stradivarius violin. It would be very valuable if the violin were a genuine Stradivarius, but there is not one chance in a million that it is.

W. H. U.—There are millions of violins in existence bearing labels just like that which you send, and, as there was only one Antonius Stradivarius, it is quite evident that he could not have made them all with his own hands. To settle the matter of genuineness definitely, you would have to submit your violin to an expert for his opinion.

Cannot Judge Without Hearing.

M. S. W.—I am sorry that your letter cannot be answered without a personal hearing, so that I could judge of your talent, and your present stage of progress. Anything I could say would be pure guess work. I would advise you to play for some good violinist in your home town, or in a large city which is nearest your home, and get his opinion. No one can form an opinion as to your musical future without hearing you play.

Keep Violin Strung.

B. G.—When a violin is in co strings should be kept strung all times, otherwise the viol out of tune continually while Some players, especially of the type, let their strings down their violins in the case, fro idea of economy. Very few str in this manner.

A Stainer.

G. F.—The label in your viol lated is as follows: "Jacobus S sam, near Innsbruck, 1633." T that Stainer, the greatest Germa put in his violins. Your label a real Stainer label, since, as St in 1621, he would have been onl of age when he made the violi not begin making violins at so Send for a copy of the June, which has an extended article o

The Vibrato.

E. B.—At the battle of Manil ish-American War, Admiral Dew ing the American fleet, opened saying to his chief gunner: " when ready, Gridley." The same be made to your question as to brato should be taken up in viol pupil should take it up when h it, and the determination of this nice discrimination on the part Many take it up too soon and their intonation. Some pupils emotional type, solve the probl selves, by commencing to do t stinctively without being told b I would not advise the pupil to vibrato until he has a good work of the first and third positions can play music of medium diffic reliable tune in these positions, the publisher for THE ETUDE, 1922, in which you will find article on the best way to studi 3—It is impossible to answer yo to how much ground the averag cover in two years of study. Y the age of the pupil, and the nu he has practiced daily. A pupil public schools, with one hour and with good talent, usually a years a fair working knowledg and third positions, with some edge also of the second, fourth and seventh positions, togeth ability to play scales and arpe octaves in all keys. Pupils wit would do much more than this, a pupils not so much.

Guidantus.

G. M. L.—Johann Florenus violin maker of the Italian s eighteenth century, and probab person as "Floreno Guidante," a labels read, made some excellent command a good price. I could the value of the violin without

Imitation Guarnerius.

J. D.—I could not give you a value of your violin without see no doubt, an imitation Guarneriu any dealer in old violins in you can tell you. You can get the violin dealer from one of the vi of the Peabody Institute of Mu more.

"Country Fiddling."

A. W. M.—Most of this "coun which is sweeping the country done in the first position, and by of the country fiddlers know som positions, but very few use the occasional notes. Their stro rhythm, and "pep."

Pricing a Violin.

S. W. W.—If you will reflect will understand how impossible to try and set a value on a violin seen. Take your violin to a good if you have one in your city, or petent judge and ask him to give of its value.

"Selling a Strad."

R. L. S.—Any firm dealing in large way can sell a Stradivariu you if it is really genuine but of contain Stradivarius labels not one in a million is actually of thi imitations are hard to sell, not I cannot advise you as to the va violin without seeing it.

Repairing Cracks.

R. J.—No doubt the cracks in can be repaired. Tropical climat hard on string instruments. 2.—T name has the reputation of being most reliable in Great Britain. F that I cannot say; I could not giv on a violin I have never seen.

Paganini's command of technic, which so astonished the world in his day that it was attributed to the influence of the Evil One, must now be considered part of the equipment of every modern virtuos this statement simply to illustra vance made in the science of thi

—JAN H

Hard Touch and the Player Piano

By Rena Idella Carver

time ago THE ETUDE published wing letter from a teacher con- a difficulty which has retarded pupil's work progress. "One of my s has a player-piano in her home. o has so hard an action that she ired a very loud touch. One might bangs, and pounds. She is a tiny even years old, and her hands gers are very delicate. How rrect her technic? If she had iary piano it would be simple. ave tried everything I can think so far, I am simply bumping my inst a player-piano!"

ll player-pianos have such stiff but the new ones are apt to be nanageable. Even a pupil, who has shown excellent progress in gaining a loose wrist on a responsive piano, is apt to stiffen and force the muscles when playing on one with a hard action. The pupil must keep the wrist loose no matter how small the tone. Much time and patience will be consumed before power is secured, and a predominance of arm and wrist exercises, followed by Dr. Mason's chord studies and chord pieces, will be necessary.

The first finger exercises may be performed on top of the keys of the new player-piano without depressing them. Then light staccato touches may be used and finally legato finger work. In proceeding gradually the pupil may acquire strength and ability sufficient to cope with the stiff action without losing flexibility.

Inspiration!

otion that the great masters com- sic only when "inspired" by some ne impulse is not borne out by the musical history. Many acknowl- asterpieces were commissioned in or prosaically produced as part y's work.

's last "Requiem," composed on d-bed, was commissioned by one 'alsegg.

ssohn wrote the overture to "Ruy a couple of days to oblige the pro- a theatrical charity performance Hugo's play of that name.

t of the day's work for which he his salary from St. Thomas' Leipsic, Bach produced a cantata k for the Sunday service. Many are masterpieces.

wrote most of his symphonies as ne day's work by which he retained his position at the court of Prince Esterhazy.

Haydn also composed one hundred and seventy-five pieces for the "bariton," a viola da gamba popular in Germany, upon which his royal master was a performer. Haydn seems to have enjoyed composing "freak" music. He wrote several pieces for a musical clock, a solo for harmonica, and seven nocturnes or serenades for the lyre. Writing incidental music for marionette shows was also "part of his job."

Beethoven began his thirty-three variations on a waltz by Diabelli to oblige a music publisher, but in this his inspiration got the better of him. The publisher wanted a "best seller," something easy for amateurs. He was appalled at the length and overpowering artistic significance of the result! Parry says of Beethoven's Op. 120 (the variations), "this alone will preserve his name to posterity should it disappear in other ways."

What Mother Can Do

By Steele Farneman

L the study the instructor may pupil, progress will many times a standstill through the teacher's nowledge of the child's psycho- itude, a knowledge which can be nly by the parent who has gained h long experience. The parent the key for which the teacher ly seeking, and which will open to fast-closed doors of develop- was so in the case of Stephen. 's feet could not reach the floor. ly refused to use a footrest and pon swinging his legs with each reover, at the piano, he seemed f-conscious, wriggling his hands, his nose, and even twisting his to strange contortions. Besides, d to itch all over and had to imself at every measure. After to overcome this habit for many ne teacher discovered one day, to her astonishment, that the boy was going about his work with no sign of fidgeting or nervousness. Curious to know what had brought about so great a change, she called on the boy's mother to discover the cause.

"Really, I was desperate," said Stephen's mother. "I used every means I could invent to cure him, but with no improvement. One evening after an especially trying practice hour, I told him that no child could be so 'scratchy' unless he was unwashed. Although I knew this was not true in Stephen's case, I insisted that he take a bath before going to bed. Baths were a nuisance and were to be avoided whenever possible, nevertheless he was very sensitive about being thought dirty. The next evening he actually tried to sit still and I knew immediately that the problem had been solved. Oh yes, I found it necessary to supervise several baths that week, but the disagreeable habit is now completely broken."

Instrumental Peculiarities

By Helen Craig

nstrument has limitations which recognized before the fullest n be gained. The piano is staccato, lacking in singing tone. n is apt to be hollow-toned and The harp inclines toward being "fluttery," the flute "reedy" and the French horn tumid and the guttural. It is the musician's problem to so subdue and direct these shortcomings that they will be transformed into the peculiar charm of his particular instrument.

Thus did Chopin seek to overcome the brittle character of the piano by striking the notes with the ball of his finger, not the more or less hard and unyielding tip immediately behind the horny fingernail.

The Child's Approach to Music Study

To win the enthusiastic interest of the boy or girl at the very outset has always been one of the biggest problems in music teaching. Leading educators agree, today, that this can be best accomplished by enabling the youngsters to *make music in their own way* with the aid of that universal musical instrument—the Harmonica. After they have become proficient on this instrument they will take naturally and enthusiastically to the study of the piano, violin and other musical instruments.

A Hohner Harmonica for the boy or girl will help solve the problem. With the newly perfected Chromatic Harmonica they can play the complete chromatic scale. It is not a toy, but a real musical instrument which will promote self-expression, rhythm, and accuracy, and lay the foundation for serious musicianship.

Hohner Harmonicas are endorsed by such prominent group educators as—

Peter W. Dykema, Prof. School Music, Columbia University, New York.
Dorothy Enderis, Ass't Supt., Milwaukee Schools.
W. A. Gore, Supt. Schools, Webster Grove, Mo.
Nellie C. Hudd, Principal Mozart School, Chicago.
Harry Keeler, Principal, Lindblom High School, Chicago, Illinois.
Edward Randall Maguire, Principal Junior High School 61, N. Y. C.
W. H. Wheeler, Principal, Alton Community High School, Alton, Illinois.

—AND MANY OTHERS—

FREE BOOK OF INSTRUCTION

This interesting and helpful booklet comprises 16 pages of simple instruction illustrated with charts and pictures, and includes six popular musical selections arranged for harmonica and piano. Copies in any quantity will be supplied upon request.

Mania for "Methods"

E:

s, speaking musically, of course,
mitted in the name of method
easily recorded. The applicant
lmost invariably asks, "What
u use?" To reply, "I do not
aching by any one method,"
gs a look of surprise.

of fact, there are certain books
ier on any instrument that are
standard. A judicious choice
s the insignia of the skillful

d that you can no more expect
benefit by one book than you
m all to like the same color or
er. It is a matter of tempera-
vious that in an ordinary class,
bound to find great variation in physical peculiarities, trueness of ear, and musical talent. Some children are naturally gifted, and could learn from almost any instruction manual, whereas others must be carefully studied and trained.

My greatest joy from teaching is the analyzing of the child, and then selecting his books and pieces in order best to encourage him and to keep his interest. Some children must be appealed to from the mechanical viewpoint. They work best when inspired with a pride in the mechanics—beautiful wrist work, true notes, and so on. Others must have an imaginative story for every piece and exercise—something to set their eyes to seeing visions as they play. I once taught a child who had to be appealed to through her strong social instinct. Every lesson hour was a social call; her pride was in being the perfect hostess. One false note was the same to her as tea spilled in the lap of a visitor.

Therefore, I say: "Away with stereotyped 'methods.'" Study each child individually, make the most of his natural tastes, and select your teaching music with an eye to advancing him—always keeping his interest.

And always, win their hearts first. A child will always work for someone he loves.

ELIZABETH BORTON.

A Memory of Theodore Presser

TO THE ETUDE:

During the winter and early summer months of 1876, when Theodore Presser was twenty-eight and I was eighteen, he was teaching piano at the Miami Conservatory of music at Xenia, Ohio, where I was a student. My roommate had taken sick and, when his mother came to take care of him, Prof. Presser had me share his room and bed for a short time until arrangements for another room could be made. This kindness revealed to me his whole-hearted generosity.

Another incident keeps bright in my memory. One day during my practice period, instead of working on my lesson, I was improvising to my heart's content, when suddenly the door opened and Prof. Presser peeped in. I was "scared stiff," but he simply said, "That's all right. Go ahead! I just wanted to see who was at the piano."

At the commencement in June his three piano graduates played the following selections: *Rondo Capriccioso*, Op. 14, Mendelssohn; *Andante Favori*, Op. 14, Beethoven; *Fantasie F-sharp minor*, Op. 28, Mendelssohn.

My association with him during that year revealed to me the beauty and charm of real music. I teach piano in a small country town and vicinity and have been a regular subscriber to THE ETUDE ever since 1888.

Our sympathies are all with Verdi.

Musical Alabama. Issued by the Alabama Federation of Music Clubs. Paper bound; 177 pages; illustrated. Published by the Paragon Press. Price, $1.10.

Far from being a mere directory, a collection of statistics, this book is a vivid outline of concerted musical endeavor in Alabama. By means of intimate touches, well-taken photographs and enthusiastic plans for the future, the volume is made to live. Throughout there is the spirit of love and loyalty for the home State which will be appreciated by every true citizen of Alabama, and, indeed, by those of all her sister States.

Two Hundred Opera Plots, Vol. II. By Gladys Davidson. Cloth bound, four hundred and fifty-one pages. Published by T. Werner Laurie, Ltd. Price per set, $2.50.

The people of the southern countries, they say, enjoy attending American and English "movies" because the very restraint of emotion portrayed produces, on these gesticulating races, the effect of adequacy. They, with us, would enjoy for the same reason the reading of this book, an Englishwoman's concise, clear sufficient summary of two hundred opera libretti, bringing before the eyes in cameo exactness the settings, the characters and the plot structure of these motley creations.

Behind the Scenes at the Opera. By Mary Fitch Watkins; three hundred and twenty-eight pages; bound in cloth. Frederick A. Stokes Co. Price, $2.50.

The author begins by explaining why it is necessarily impossible for the uninitiated to enter the doors of this world back of the opera stage. There is one door she has opened for us, however, by her vivid imagination, through which we see figures such as the genial Caruso distributing gifts on Christmas to the force of workers at the Metropolitan and Lucrezia Bori kneeling in the Swiss Chapel, whence she has fled from the laughter outside, praying for her lost voice. "Behind the Scenes," we find, is not a dusty waiting room where mannikins respond to curtain calls as to wires pulled, nor yet a dreamland of puckish gaiety, but a testing-ground for hearts at whose entrance could well be written, "If ye have tears prepare to shed them now."

Compelling Weight Pressure and the Singing Tone

By Fern Blanco

PIANO pupils who hold wrist or finger muscles stiffly and whose hand position is faulty will inevitably produce a thin, colorless tone which sometimes persists in spite of all words of counsel and explanation.

When example and precept have proved inadequate, let the teacher take the pupil's hand in hers and guide it into a good position. Then, while his muscles are quiescent, let her grasp his fingers one by one, push them down on the keys with the necessary pressure, and produce through them the desired tone. After playing the passage in this manner with each hand separately, the pupil will get the actual sensation in his own muscles, and will change his "wooden touch" for a full, rich, flowing legato.

Interpretation "Tools"

By Edith Josephine Johnson

TO LEAD the piano student to see the inherent possibilities of a composition, a variety of interpretations of Heller Op. 46 may be used. The procedure interferes with the Italian indications but brings a reward in developing the pupil into a student. Invariably the composition is mastered as printed. Then the pupil is ready to appreciate the effect of tempo on its interpretation. In each study a change in the tempo requires a deeper or lighter touch.

Number 3, marked *Allegretto,* may become *Andante Maestoso.*

Number 16, *Allegretto,* sometimes called *Merry Shepherds,* may be played *Lento,* the touch being deepened to indicate heaviness from grief. The staccato notes are necessarily not very short.

Number 17, *Andantino,* may be changed to *Cantando.* This study is very expressive if all markings are exaggerated. It shows the pupil what can be done with ordinary material.

Number 23 is an excellent example of the effect of tempo and touch. It should first sound carefree, the repeated notes being delicate. The second interpretation is *Maestoso;* the repeated notes sound ominous.

Number 24, *Allegro con brio,* may be exaggerated into a *scherzo.*

Number 27, *Allegretto con Moto,* may have two new interpretations. In the first, *Cantando,* the dotted half-notes are the song and the smaller notes the accompaniment, and in the second, *Scherzo,* the smaller notes are more important.

Number 28, *Allegro non troppo,* may become *Serenade on the Water,* slow and dreamy with undulating effect.

The insight gained by the exaggeration necessary to the new interpretations increases the pupil's understanding of the music itself and of the resources of the piano in the way of contrasts.

The Critical Sieve

By H. E. Harvey

AT A concert, at a lesson, at practice, impressions should be taken in as a fish does water, or as a vacuum-cleaner air, regardless of what sediment or foreign particles lurk therein. Even Rubinstein was known to say, on being complimented on a successful performance, that there had been sufficient wrong notes struck to give material for another concert.

There is no reason why the composition itself should be accepted with unqualified approbation. There may be flaws in the chord progressions, in the tonal arrangements, in the climactic devices. Also, there may be incorrect interpretations of the composer's idea in the way of exaggerated rhythms, inadequate phrasing, or perversion of effect. Then, too, there may be faulty intonation, poor touch or lack of expression. The critical judgment can be made a fine sieve allowing only the true and beautiful impressions to become an integral part of one's musical make-up.

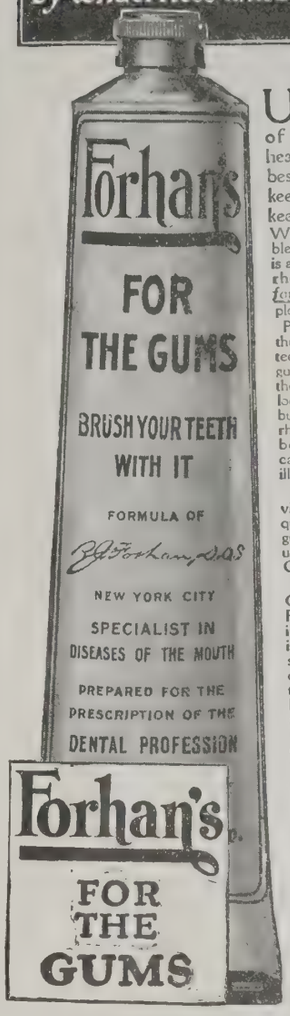
What the Piano Teacher Should Know

By T. S. Lovett

THE piano teacher should know:

That technic is not an aggressive, mechanical action of fingers, but a control and co-ordination which permits of the power of expression including every phase of piano playing except the individuality or personality which distinguishes one pianist from another.

That all weight is pressure, but that all pressure is not weight.



That leverage is an important factor in the production of a well-balanced tone.

That leverage is action, but that action is not necessarily leverage.

That a teacher's method is every word that he utters.

"It has been found in primary schools that children who are given 'time off' from certain subjects for musical instruction are better in these subjects than the children who put in the whole time allotted do them."—*Mr. C. H. Gore, M.A. (Hymers College, Hull).*

Unhealthy gums denoted by tenderness and bleeding

UNHEALTHY soil kills the best of wheat. Unhealthy gums kill the best of teeth. To keep the teeth sound keep the gums well. Watch for tender and bleeding gums. This is a symptom of Pyorrhea, which afflicts *four out of five* people over forty.

Pyorrhea menaces the body as well as the teeth. Not only do the gums recede and cause the teeth to decay, loosen and fall out, but the infecting Pyorrhea germs lower the body's vitality and cause many serious ills.

To avoid Pyorrhea, visit your dentist frequently for tooth and gum inspection. And use Forhan's For the Gums.

Forhan's For the Gums will prevent Pyorrhea—or check its progress—if used in time and used consistently. Ordinary dentifrices cannot do this. Forhan's will keep the gums firm and healthy, the teeth white and clean. Start using it today. If gum-shrinkage has set in, use Forhan's according to directions, and consult a dentist immediately for special treatment.

New publications that continue the high standard required by music teachers everywhere

TEN IDEAL LESSONS FOR CHILD TRAINING IN PIANO STUDY
by Kathleen Air - - - - - - - - Price, .50

To create in the child a love for music; to provide the pupil with a true foundation—mentally, musically, rhythmically and physically; to give to the anticipation of future study a keen desire—this and much more is hoped for in the practice of these lessons. Ideas successfully used by Miss Air in her work as head of the Children's Department of the Columbia School of Music, Chicago. Suitable for class work or private instruction.

MUSIC WRITING BOOK FOR SCALES AND CHORDS
by Kathleen Air - - - - - - - - Price, .60

Unusually complete in its requirements. Gives scale and chord fingering, letter, number and syllable names of notes, and the interval number of the scale upon which each chord is built. Generous space is provided for the writing and a range of four octaves is used. Valuable to use with the work mentioned above.

THE QUEER LITTLE HOUSE OF LINES AND SPACES
A Note Spelling Book
by Elizabeth Blackburn Martin - - - - - Price, .60

Here the pupil learns the notes on the grand staff through the medium of play. The connection is quickly conceived between the names of the children of "King Bass" and "King Treble" in their "Queer Little House" and the letter names of the lines and spaces. The results are satisfying. Includes lessons in note values and notation, rests and key signatures. Serious work presented interestingly.

A TRIP TO MELODY LAND
by Emma Menke - - - - - - - - Price, .65
(Summy Edition No. 118)

A volume of short melodious pieces progressing carefully in grade of difficulty and making real work attractive.

A HAPPY THOUGHT'S ADVENTURE
CHIMES AND BELLS Grade 1 MY BOAT IS SAILING
by Marie Seuel Holst - - - - - Price, each, .30

All for the purpose of developing a freedom of hands in Interlocking, Crossing and Playing in both Clefs. Words add interest. (A Discount Allowed to Teachers)

Summer Reading for Musical Folk

The day has passed when one can maintain a comfortable status in the musical world upon a meager knowledge of things musical, and instead of idling away summer hours with interesting fiction that is not lasting, those really enjoying their contact with, or their position in, the musical world will take advantage of summer moments to read some of the many fascinating and entertaining books upon musical subjects that are in existence.

There are musical biographies, musical histories or musical anecdotes that make far more interesting reading than the average fiction, and at the same time give information to the music lover that is valuable.

Send to us for our Descriptive Catalog of Musical Literature and Musical Works to help you in selecting suitable reading for this summer.

Summer Entertainments

In this great age of community activity, particularly centering around music, there are frequent requests for music for outdoor entertainment and festivities.

Here at the Theodore Presser Co., we conduct a music store that is national and international in its scope; therefore, for special occasions we receive many more requests than might go to other sources. Where others do not have the need for being ready to make special suggestions, we do have such needs, and we assure those seeking something for outdoor musical work this summer that we can assist them in securing suitable material.

We have such things as "Mother Goose Fantasy," by Arthur Nevin; "The Ghosts of Hilo," by Paul Bliss; "The Castaways," by Fay Foster, to recommend as operettas for young ladies, or such cantatas as the "Fairies' Revelry," by R. Kieserling; "Peter Pan," by Mrs. H. H. A. Beach; "Mon-dah'-min," by Paul Bliss, make delightful offerings for outdoor rendition by women's voices.

For juvenile participants, the "Mother Goose Fantasy," by Nevin, can be used, as well as others like "Pageant of the Flowers," by Richard Kountz; "Light," by Richard Kountz; "Bobolinks," by Carl Busch; "A Rose Dream," by Mrs. R. R. Forman; "A Day in Flowerdom," by Geo. L. Spaulding, and others.

Those desiring something in musical plays for young ladies and young men would find such offerings as "From the Yellowstone," by Lieurance; "Hearts and Blossoms," by R. M. Stults, very acceptable.

Last, but not least, a very helpful publication for those conducting outdoor entertainments, festivals or fetes is the "Newman Album of Classical Dancing." This contains complete descriptions and music for fourteen beautiful dances, covering artistic offerings for solo dances, group dances and ballets.

Many professional musicians overlook the type of publicity that is their biggest asset, the engaging in musical activities that command the attention of their entire community. If you have never done any work of this kind, look around for some natural outdoor theater, and even though the most ideal spot is in someone's private grounds, frequently those individuals, possessing such beautiful grounds, are public-spirited enough to open them to some activity that is for the good of the entire community.

Most certainly we can help you by supplying excellent material for the program.

New Piano Music for Summer Teaching

Thousands of teachers throughout the country are as actively engaged in teaching during the summer as any other season of the year, and for the help of those teachers we maintain a special new music "On Sale" service during the summer months.

We invite all piano teachers conducting regular lesson periods during the summer to request our Piano Summer New Music Packages. This will result in our sending several packages during the summer (not more than one package a month) of new pieces; this music will be charged "On Sale" and there is no obligation to buy any, except that which is used. All unused music from these packages may be returned for full credit.

Be sure to mention that you want Piano New Music Packages, since we also will make up such packages for voice, violin, and organ. If any of these classifications are desired, we will be glad to send them.

How to Play the Piano By Mark Hambourg

Mark Hambourg has won a definite place in the hearts of the readers of The Etude by his exceedingly practical, invariably helpful and always readable articles on the art of playing the piano.

Some years ago in England he wrote a book which had an immense vogue in that country, over fifty thousand copies having been sold, according to our understanding. By arrangements with the publishers, it now becomes possible for us to put this very clear and succinct volume in the hands of our readers at a very moderate price. When one realizes that a lesson of Mr. Hambourg in person would cost over twenty times the price of this book, the value of the volume can be appreciated, because it contains the essence of a great many lessons.

The special introductory price prior to publication as a strictly Presser publication is especially low, because we are able to purchase from the former publisher a limited number of bound copies. This introductory price is 80 cents.

The Pianist's Daily Dozen By Charles B. Macklin

For years teachers have been seeking a means of developing strength in the hands as rapidly and effectively and safely as possible. We have seen many systems suggested. Some of these systems are hopelessly elaborate and require the student to go through long and unprofitable exercises.

Mr. Macklin, by making "The Daily Dozen," has accomplished some very unusual things. This is not the kind of a book for the teacher to get and put away on the library shelf. It is the kind of book that teachers will want to recommend to pupils who are really anxious to succeed.

We are going to put it upon the market at a very moderate price and, of course, our special introductory price in advance of publication is exceedingly low. This price is 30 cents.

How to Sing By Luisa Tetrazzini

The Theodore Presser Co. has acquired the publishing rights of "How to Sing," by Luisa Tetrazzini, perhaps the most brilliant coloratura soprano in recent musical history. Madame Tetrazzini has some very positive ideas upon her art, and in this book she has expressed them in a very clear and interesting manner. By securing a number of bound copies of this new work from the former publisher, we are able to put this upon the market in America for introduction purposes for a very short time at a surprisingly low rate.

Surely, no student of singing will fail to take advantage of this opportunity to add to his library an exceedingly important and instructive book for continual reference. The special introductory price is $1.00.

New Easy Four-Hand Album

There is a steady demand for easy four-hand music. It has been some time since we have published any collections of this nature, but we now have the pleasure of announcing a new compilation. In order to provide for the needs of beginners in four-hand playing, as well as for those a little further advanced, we are including first and second grade pieces in generous proportion. The pieces will be arranged as far as possible in progressive order, just touching the third grade. Only copyright material will be used, and the best composers will be represented by their most tuneful numbers.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Album of Study Pieces In Thirds and Sixths

We are pleased to announce a new volume in the series of *Study Pieces for Special Purposes.* The volumes in this series previously published are *Album of Trills, Album of Scales, Album of Arpeggios* and *Album of Octaves.* The fifth volume in the series now being announced for the first time is *Album of Double Notes Thirds and Sixths.* In modern piano playing the study of double notes becomes more and more necessary, and in this new volume will be found a splendid collection of pieces suitable for the purpose. This is an intermediate grade book, just as are the other albums.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

New First and Third Position Album for Violin and Piano

While the first position, of course, lies at the basis of all violin playing, just as soon as this position has been well established, the student should begin to learn to make the shift, so as to go to other positions. The position next in importance is the third position, and the student may remain for a considerable period in the first and third positions. During this period our album of first and third position pieces will be just right. Every piece in this album is a gem well worth playing, agreeable to the listeners and profitable to practice.

The special introductory price in advance of publication is 50 cents per copy, postpaid.

Beginning with the Peds Of the Piano By Helen L. Cramm

The announcement of the a publication of this work has most gratifying response from teacher patrons, many of them vantage of the low advance of price to place orders for fi copies. This little work should useful to piano teachers wh charge the instruction of ambiti students. The proper handlin pedals is of such vital importan piano playing that the study should begin as early in the course of study as possible. Th tive little studies, by one of the cessful writers of juvenile material may be given to stude second grade. While this work prepared for publication, we ar orders for it at the special pr cents a copy, postpaid.

Penitent Pirates—Operet By Paul Bliss

Although Mr. Bliss has other Operettas and Cantatas to his c is the first Operetta or Musica offering by Mr. Bliss engaging ticipation of both sexes to be add catalog.

We have sold thousands of *Ghosts of Hilo,* an operetta f ladies, and after examining th script of *Penitent Pirates* for b ladies and young men, we feel ce its success will be even greater gratifying success of *Ghosts of*

Penitent Pirates is nicely arr two acts, and the music surrou excellent plot is not at all diffic the majority of the choruses unison.

Tunefulness and a feeling of is ever present in all the musical v the staging can be handled e elaborateness being governed by ities for making the most of th tunities for picturesque staging.

Those who are interested in this kind most certainly should copy, whether they plan to produ thing late in the fall of this ye some later date in the future, and vance of Publication offer herew opportunity to secure a single c price of 40 cents, postpaid.

The Storm for Piano Solo Or Pipe Organ By Clarence Kohlmann

Many thousands annually att Ocean Grove Auditorium and h Clarence Kohlmann's rendition *Storm.* We now have this work aration, both as a piano solo an organ solo. It is one of the bes pieces ever compiled. In additio actual storm portion and other material of Mr. Kohlmann's, it quotations from other composers Haydn, Tschaikowsky and others resented, and well-known hymns a duced in chime effects, together w others of the good old songs.

The special introductory price vance of publication is as follow the piano solo, 25 cents per copy, p for the organ, 25 cents per copy, p

A Dozen Melodies for Saxophones By Clay Smith

Mr. Clay Smith is best known his many successful songs and as rector of a well-known concert o tion. One of his specialties is th phone. In this new volume now i aration he has taken twelve of h successful songs and arranged th saxophone and piano. There is one of piano accompaniments which for all, but there are separate p solo or duet form for the C Melod phone, the E-flat Alto Saxophone B-flat Tenor Saxophone, respectiv

Romeo and Juliet Operetta for Men By John W. Brigham

Can you imagine anything funnier than an enactment of the famous balcony scene from Shakespeare's romantic drama with both of the characters played by men? The dulcet (?) tones of an adult male voice booming forth the impassioned lines spoken by the beautiful Juliet? This is only one of the delicious bits of humor that occur in Mr. Brigham's new operetta-burlesque for men. Those who have used his previous work, *Cleopatra,* one of the outstanding successes in recent musical entertainment publications, will know about what to expect in this new operetta. The music is always tuneful; it is a mixture of original numbers and interpolated familiar melodies. Some of the ensemble numbers are written for unison singing, others are scored for four parts, and none of them present any difficulties that cannot be overcome by amateur singers. The play does not require an elaborate stage setting, although the possibilities of an interesting one readily can be realized. Directors of men's organizations, high school and college glee clubs should not neglect to secure a copy of this operetta for examination while it is obtainable at the special advance of publication cash price, 40 cents, post paid.

Five Little Tunes for Five Little Fingers—Pieces for the Left Hand Alone By Mildred Adair

Pieces for the left hand alone are very much in fashion. Young students are always proud of being able to exhibit their technical proficiency in this manner and, besides, excellent practice is afforded the left hand. The new book of Five Little Pieces, by Mildred Adair, contains about the easiest numbers for the left hand that we have seen. We would grade them about one and one-half. This volume has a further advantage in the fact that the student, in addition to developing the left hand, gains also an elementary knowledge of the use of the pedal.

The special introductory price in advance of publication is 25 cents per copy, postpaid.

First Garland of Flowers—Favorite Melodies in the First Position for Violin By Julius Weiss, Op. 38

A very popular set of piano pieces that has long been a favorite with teachers, as they present excellent material that is attractive to the young pupil who has as yet not acquired much technic. These little pieces are all in first position, and having a piano accompaniment, the ambitious beginner is able to have the thrill of playing a "piece" at a very early stage of his musical training. This edition of *First Garland* will be edited with the same care that has been shown in all our other recent additions to the well-known *Presser Collection.*

At the special introductory cash price in advance of publication of 35 cents per copy, postpaid, we anticipate a great demand for this popular work.

Twenty-Four Caprices For Violin Solo By P. Rode

We are pleased to announce another very strong addition to our constantly increasing *Presser Collection* in these *Twenty-four Caprices in the Form of Studies for Violin Solo in All the Twenty-four Keys,* by P. Rode. This fine work is used after the Kreutzer Studies and, in fact, is considered one of the three indispensable works of advanced violin technic, viz.: Kreutzer, Rode and Fiorillo. This new edition will be edited by Mr. Otto Meyer, the personal representative of Sevcik in this country. Mr. Meyer has done the editing of a number of other recent works in the *Presser Collection,* and we are sure that this new edition will meet with the approval of all teachers who demand the best in educational publications.

The special introductory price in advance of publication is 45 cents per copy, postpaid.

Twelve Melodious Studies In Scale and Chord Passages For the Pianoforte By C. W. Kern, Op. 560

Mr. Kern is a very prolific writer and our catalog contains most of his successful piano compositions. He is a practical musician and many teachers use his piano pieces in their work, as they are almost always suitable for teaching purposes. This latest contribution of his is a set of piano studies in the form of study pieces, beginning in Grade 2 or 2½ and progressing into the Third Grade. Each of the studies has a title, and each is accompanied by a note explaining the technical object to be attained. Teachers who wish to obtain these useful studies may order a copy in advance of publication at the special price of 30 cents a copy, postpaid.

Standard Second-Grade Recreations for the Pianoforte

The new volume of *Standard Second-Grade Recreations for the Pianoforte* is similar in size and scope to *Standard First Pieces* and *Young Players' Album,* both very successful works. About seventy pieces may be expected in this album, since it is one of the series made up from the special large plates. They represent the cream of all the good teaching pieces recently published by us. The volume will be ready very soon.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Advance of Publication Withdrawals

Comes a time when the publications that are announced by us in Advance of Publication must go forth to gain upon their merits a place with buyers of music publications. This month three new publications are ready for the market and, accordingly, the opportunities to secure copies at bargain Advance of Publication prices are now withdrawn.

Album of Octave Playing is one of the works being withdrawn. This is the latest volume to appear in the series of *Albums of Study Pieces for Special Purposes.* Preceding volumes covered Trills, Scales and Arpeggios. Like the three preceding volumes, the Octave Volume presents pieces for the development of the department of technic it covers. Price, 75 cents.

Bach Album (Sara Heinze). This excellent selection of twenty-one easier compositions by Bach is now ready in a fine new edition in *The Presser Collection.* Price, 75 cents.

From the Dalles to Minnetonka, Piano Suite, by Thurlow Lieurance. The best description we can give of this album in a limited space is to say that no accomplished pianist, advanced student or concert pianist should be without these numbers. It is an art work in every way. Price, $1.25.

Change of Address

Those subscribers who desire ETUDE MUSIC MAGAZINE mailed to their summer addresses will kindly notify us at once, giving both the old and new addresses. It would also facilitate matters if they will be careful to specify the date on their return to winter residences.

(*Continued on page 478*)

World of Music

(*Continued from page 407*)

The Ann Arbor May Festival, with Earl V. Moore as musical director, occurred on May 19 to 22. Presentations of the "Elijah" and of "Lohengrin" in English in concert form, were the leading choral events. The Chicago Symphony was the official orchestra with Frederick Stock leading it in concert numbers; while Louise Homer, Florence Austral, Giovanni Martinelli and Albert Spalding were leading soloists.

A Prize of One Hundred Dollars is offered by the Alumni of Tulane University, New Orleans, Louisiana, for an Alma Mater Song. Particulars to be had from J. Randolph Foote, Tulane University.

The North Carolina Federation of Music Clubs met in convention at Burlington, April 6 to 8. Among the notable speakers and artists present were Mrs. Edgar Stillman Kelley, Mrs. H. H. A. Beach, Mrs. Crosby Adams and Miss Irene Williams.

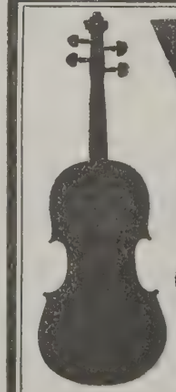
Allessandro Liberati, long considered the premier cornetist of the world, and later touring at the head of his own band of one hundred and ten pieces (the largest that had ever paraded), will soon celebrate his seventy-ninth birthday in New York.

Kurt Schindler, for seventeen years the conductor of the famous Schola Cantorum of New York, at one of whose concerts Dusolina Giannini made her sensational début, has submitted his resignation to take effect at the close of the present season. Mr. Schindler's activities will be transferred to the conducting of a chorus in a new theatre in the course of construction.

A Bach Cantata Choir has been organized in London for the study and popularizing of the cantatas, both sacred and secular, of the great Cantor. It is composed of professional singers, so that a high degree of art in their interpretations may be expected. Its performances will be accompanied by the Bach Chamber Orchestra, an instrumental organization along similar lines; while well-known singers will be engaged for solo parts. A hopeful omen for sane music. It is interesting to recall that Bach wrote no less than two hundred and ninety-five Church Cantatas, of which one hundred and ninety-nine are preserved, and which contain some of his most beautiful music.

Presser Home Bulletin

On the afternoon of Sunday, April 18, the Presser Home Family was pleasantly entertained with a Sacred Recital, given by Mr. Alan Hensel Lewry, violinist, assisted by the Quartette Choir of Old St. John's Lutheran Church at 21st and Sansom Streets. For several years Mr. Lewry has been most generous in furnishing us with enjoyable programs, and he is always cordially welcomed by the Home folk.



On Monday evening, April 26, we had a unique entertainment, furnished by members of the Club. The "Spanish Cachoucha," the "One-Word Colloquy," and the very laughable "Pantomime" would have been creditable to professionals. All details, including the designing and making of the costumes, but excepting the composition of the music used, were contributed by one of the members of The Home Club.

WHAT THE VOCAL STUDENT SHOULD KNOW

By Nicholas Douty Price, $1.00

An introduction to the art of singing, with daily exercises for all voices selected from the works of the great masters of singing. This book tells in an interesting manner the important principles that will guide the vocal student aright.

An Invitation to all Music Lovers to Become Acquainted With Etude Music Magazine

During the months of June, July and August we will accept three-month subscriptions for ETUDE MUSIC MAGAZINE at a special rate of 35 cents. While this amount hardly covers the actual cost of manufacture, it will give any music lover, not familiar with our splendid publication, an opportunity to become acquainted with its pages. It also enables teachers who realize the importance of their pupils retaining an interest in music throughout the vacation period to keep alive that interest, either by having the pupils subscribe, or by presenting them with a three-month subscription. At the end of three months we will accept $1.65, counting the 35 cents already paid, toward a full $2.00 year's subscription. These offers will be accepted as long as the June, July and August numbers are in stock.

Beware of Fraud Agents

The ETUDE MUSIC MAGAZINE cannot be responsible for the work of swindlers. Pay no money to strangers unless you have satisfied yourself that the agent is authorized to take subscriptions for the ETUDE. Read any contract submitted to you carefully. It is surprising how many rogues impose on the public, and it is amazing the number of people who are careless in paying out cash on the strength of a story told by a glib impostor. We cannot be expected to make good such losses.

High-Class Magazines At Summer Prices

Note the full-page advertisement on the inside back cover of this number. It shows your favorite fiction combined with ETUDE MUSIC MAGAZINE at a very substantial saving. Your orders will receive our careful attention.

THE PRESSER PERSONNEL

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

Mr. Elwood M. Angstadt

As it is the general rule that the leading musicians in each community are active in its choir and choral affairs, it can be seen readily that the Theodore Presser Co., in an endeavor to render unequalled service to the profession must maintain a well stocked and an efficiently functioning Octavo Department.

Mr. Elwood M. Angstadt is responsible for the efficient functioning of this department. Everyday sales make it necessary to replenish the stock, and good judgment must be used as to what quantity the sales record of each number warrants our securing from the publisher for stock. Mr. Angstadt must indicate this. The major portion of his busy day, however, is occupied in checking the orders that have been filled by the clerks laying out orders in the Octavo Department. No matter how experienced are the clerks, there is a Checker for each department (some departments require several) who carefully compares the correctness of each number filled on the order with what has been ordered and most carefully checks up on any item that the Order Clerk may not have found.

Therefore, Mr. Angstadt has no little task in looking after things in this department, in which anthems and choruses of all publishers are stocked.

Mr. Angstadt was new with us in 1916, but his retentive memory, industry and intelligence soon made him a valued member of our organization, and another department was the loser when in 1921 it was deemed advisable to have the benefit of his services exclusively in the Octavo Department.

Splendid Rewards for New Etude Music Magazine Subscriptions

The following list of really worth-while gifts are given for new ETUDE subscriptions (not your own). Any music lover, student or teacher not a subscriber for ETUDE MUSIC MAGAZINE is a prospect. Show your copy of the ETUDE and you can easily convince any musician that the ETUDE pays a mighty big dividend in attractive music, practical advice on music and interesting events and anecdotes constantly occurring in the music world.

Lemonade Set—Containing six glasses and one glass pitcher, all very attractively etched. Only two new subscriptions.

Handy Ice Set—A summer necessity—a pair of ice tongs, an ice pick and an ice shaver for lemonade or other cooling drinks. These tools are an exceptional value, made of the best quality steel, nickel plated. Only one new subscription.

Kitchen Set—Five pieces. Here is a handy set of kitchen tools which any housewife will find indispensable; consists of chopper; four-in-one tool (a useful device for removing milk caps, as an ice pick, a crown bottle opener and for opening friction covers on cans); one cake turner; mixing spoon, and that every day necessity for vegetables, meats, etc., a large fork. Only one new subscription.

Knife Sharpener—No more dull kitchen knives; this sharpener puts a keen cutting edge on any knife. Only two new subscriptions.

Campers' Outfit—Excellent for carrying in your car or for a picnic luncheon; 6 teaspoons, 6 tablespoons, 6 forks, 6 knives, sugar spoon, butter knife, all heavily nickeled on steel; will not tarnish. Only three new subscriptions.

Art Leather Shopping Bag—A strong, durable water-proof bag, two sizes: 7 x 11 inches, one new subscription; 8½ x 14 inches, two new subscriptions.

Pearl-Bead Choker—Graduated. Only one new subscription.

Ladies' Leather Memorandum Book—with pencil attached. Only one new subscription.

Send post card for complete catalog, showing other gifts and rewards for obtaining ETUDE MUSIC MAGAZINE subscriptions.

Summer Time is Ukulele Time—Obtain One for Etude Subscriptions

We have just arranged with the manufacturers of Banjo Ukuleles whereby we can supply these popular instruments for very few new subscriptions to ETUDE MUSIC MAGAZINE. Each one is well made, holds its tone, and will prove a source of delight and pleasure to any music lover.

Banjo Uke—All wood, stained mahogany; 3 subscriptions.

Banjo Uke—Bird's-eye maple, beautifully finished; 4 subscriptions.

Banjo Uke—Spruce and bird's-eye maple, 7-inch calfskin head; 5 new subscriptions.

All transportation charges prepaid.

Let your subscription orders come forward quickly and you can enjoy an instrument during the summer and early fall months.

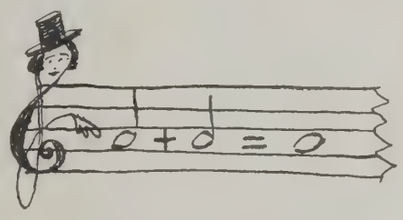
The Fairyland School



By Gertrude Greenhalgh Walker

"O, MUMMY, I just wish I were a little woodland fairy," exclaimed Betty as she finished her day's practicing.

"Well, you are my little fairy; but why do you want to be a little woodland fairy?" asked Betty's mother.

"Just because fairies may do as they want to, and are able to make music without practicing and counting. I hate to count with my practicing, but Miss Brown insists, because, without counting, she says I do not play 'rhythmically, and *rhythm is the soul of music.*'"

"Well," said mother, "I am sure little fairies do have to study to be able to do all their wonderful things; but never mind, just take a little nap and maybe some little fairies will come and play with you."

Sure enough, Betty was soon in the land of Nod, and then in Sleepyland when suddenly she heard a little voice calling, "Yoo-hoo—Betty—Oh Betty! Do you want to come and visit school with me to-day?"

Betty looked down, and there was little Rose Fay, with her books under her arm, all ready for school. "I never knew fairies went to school," exclaimed Betty.

"Oh, yes, my dear, else how would we learn our many duties?" said Rose. "Hurry up if you are coming, for I dare not be late. Punctuality is insisted upon by our teacher."

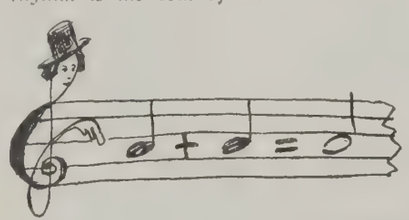
"All right, little fairy," said Betty, and away they tripped, through meadows and fields, past a babbling brook, and right to a grove of silver birches.

"What a heavenly school-room," thought Betty. "I do not see any blackboard, though," she continued.

"No," said Rose Fay, "we use the birch bark. Ink berry fluid is gathered by boy fairies, and we use that instead of chalk."

Soon Bluebell pealed a happy tune and school began. The little fairies sang their "Good Morning, Dear Teacher" song; and then came an arithmetic lesson. The problems were in fractions. Teacher said something about 4-4 time (Betty wondered what 4-4 time had to do with fractions) and how many halves make a whole.

"Two," answered fairy Marigold.



"Good," said teacher, "put the answer on the Silver Birch Tree, so the class may see it."

Marigold stepped up to the tree and drew five horizontal lines and some perpendicular lines and a key sign, and then the fairy teacher asked Rose Fay to play the two quarters in 2-4 time.

"Gracious me," thought Betty; "that's the queerest fraction example I ever saw. I wonder what it means."

When the fairy teacher asked what members of the class could explain why fairies had to learn fractions, every little fairy knew the answer. Each raised her hand, hoping that the teacher would call upon her to explain; but the teacher chose Rose Fay, because she had brought a little guest to school.

Rose stood up and said, "Fairies learn fractions to help them sing their pretty tunes. Fractions are part of rhythm, and *rhythm is the soul of music.*"

Just then Betty saw "four o'clock," and, rubbing her eyes to see if it were really four o'clock, rubbed them open and saw mother sitting by her side smiling.

"Have you had a good nap, Betty?" she asked.

"Oh yes, mother; and fairies do go to school and count, too. Please let me telephone Miss Brown that I am going to count every time I practice so my music, too, will have a soul."

Things to Remember

By Marion Benson Matthews

There is so much to keep in mind
When I am practicing, I find;
First, count aloud, "one, two, three, four."
(So not to miss a beat, or more);
Then watch the fingering carefully,
And keep the wrist relaxed and free;
Look out for every sharp and flat—
Just make a mental note of that;
And mind the rests when they appear,
Or teacher's tone will be severe.
I must remember all of these—
Time, fingering, and rests and keys.
I'll do my best, and then, some day,
The hardest music I can play!

Club Corner

DEAR JUNIOR ETUDE:

The delegates of the Junior Clubs of Kansas have just returned to their homes after a most delightful and instructive time spent in convention at Independence, on March 23, 24 and 25.

This is the first time the Juniors have had so important a place on the convention program, and that they appreciate the generosity of the Seniors and friends was shown by the fact that with twenty-eight clubs in the Junior Department, the visiting delegates numbered 22, aside from the sponsors and directors who came with the Juniors.

Wednesday was Junior Day, and, after the morning spent in reports, a Junior luncheon was enjoyed at which plates were set for over a hundred Juniors and their friends. Several visiting musicians and the officers of the Federation were guests of the Juniors. Following the luncheon an interesting conference was held. The Junior delegates briefly reviewed the activities of their clubs for the past year, in response to roll call.

After the conference, the Junior delegates gave a musical program of exceptional merit. The average ages of the performers were twelve and fourteen years and the program from the first number to the last was played in an artistic manner.

Kansas has recently become famous agriculturally through the slogan "Kansas Grows the Best Wheat in the World." The Juniors are going to place her properly before the public artistically with this slogan: "Kansas Grows the Best Musicians in the World."

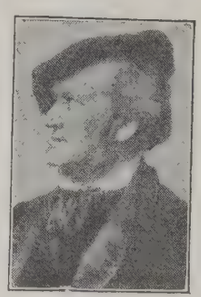
MISS LUCILE M. THOMPSON

Question Box

DEAR JUNIOR ETUDE:

I am very much interested in music and have received much help from the ETUDE.

I want to start a "Never-say-no" club and would like some information as to how to start it. The members all love music, and their only failing is that they are never ready or too nervous to favor us with singing or playing. We have some excellent talent and would surely appreciate it if they would favor us by letting us hear them.



L. V. I.
Iowa.

Answer. The mere fact of anyone belonging to a "Never-say-no" club should take care of the question of refusing or having nothing ready to sing or play. One of the qualifications for membership should be willingness and readiness to perform when asked by the program committee. Elect a president, and chairman of program, and a secretary-treasurer, if you intend to require one. Decide on a meeting place and how often to meet. In the JUNIOR ETUDE for December, 1925, you will find a short set of by-laws and other particulars about clubs, which might help you with your club.

Do You Get Your Share of Profit and Prestige from Summer Classes?

ORGANIZE A MUSICAL HISTORY CLASS

Using As a Text-Book

WAGNER

THE Standard History of Music

By

JAMES FRANCIS COOKE

Price, $1.50

MENDELSSOHN

Thousands of teachers in all parts of the country have organized successful and profitable musical history classes with

This Immensely Successful History of Music for Students of All Ages

Eight Delightful Weeks of History Study

On the Porch — In the Garden — By the Shore — Anywhere

1st Week. How Music Began. Music in the Early Church. How Notation was Evolved. The Troubadours and Meistersingers. Polyphonic Music. Palestrina. Early English Music.

2d Week. Opera and Oratorio. Scarlatti and His Contemporaries. The Bach Family. Early French Music. The Story of the Organ, the Violin and the Piano.

3d Week. J. S. Bach, G. F. Handel, F. J. Haydn, W. A. Mozart.

4th Week. Glück, Beethoven, Schubert, Weber, Mendelssohn.

5th Week. Schumann and the Age of Musical Romance. Opera Writers of the Nineteenth Century. Great Teachers of the Pianoforte.

6th Week. Chopin, Liszt, Wagner. Modern Italian Composers. Rubinstein. Great French Composers.

7th Week. Modern Masters. Brahms, Grieg, Tschaikowsky. The Art Song. Famous Pianists of Yesterday. Great Virtuosos of To-day. Great Violinists. Composers of Valuable Pianoforte Pieces in the Smaller Forms. Composers of Teaching Pieces.

8th Week. Music in America. Masters of To-day. Summary of Musical History. Formation of a Music Study Club for Next Winter.

A KNOWLEDGE of musical history is of the greatest possible value to all students of music. It increases the desire to study immensely and prepares the pupil for association with people of culture and musical experience. Using the above outline as a schedule, any music teacher may start a class at once, as this history demands no previous experience in teaching musical history. This work has been endorsed by leading educators, including Emil Sauer, Arthur Foote, I. Philipp, V. dePachman, W. H. Sherwood, Mme. Bloomfield-Zeisler, and many others.

The modernized, newly revised edition of this inspiring text-book contains two new interesting chapters on organizing and conducting a young folks' musical club.

Let Us Help You in Securing a Class

Send us a postal request for information regarding our "Special History Class Plan," and receive in return the material which will enable you to start at once and make your plans for turning your Summer from Waste and Loss to Profit and Pleasure.

STANDARD HISTORY List of Victor Educational Records to accompany each chapter sent gratis to anyone upon request.

An Excellent Musical History for Juvenile Summer Classes

YOUNG FOLKS' PICTURE HISTORY of MUSIC

By James Francis Cooke **Price, $1.00**

This first "History of Music" tells all with an intimate touch which really makes it a fascinating story book. It even tells how any little child may learn to compose a tune. There is an enjoyable touch of play in the form of the one hundred picture illustrations furnished, to be cut out and pasted in their proper places.

THEODORE PRESSER CO.

1710-1712-1714 Chestnut St. Philadelphia, Pa.

"Everything in Music Publications"

JUNIOR ETUDE—Continu

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original stories or essays and answers to puzzles.

Subject for story or essay this month—"Music in My Home." Must contain not over one hundred and fifty words. Any boy or girl under fifteen years of age may compete whether a subscriber or not.

All contributions must bear name, age, and address of sender written plainly, and must be received at the JUNIOR ETUDE Office, 1712 Chestnut St., Philadelphia, Pa., before the twentieth of June. Names of prize winners and their contributions will be published in the issue for September.

Put your name and age on upper left hand corner of paper, and address on upper right hand corner of paper. If your contribution takes more than one piece of paper do this on each piece.

Do not use typewriters.

Competitors who do not comply with ALL of the above conditions will not be considered.

MUSIC FOR BOYS
(Prize Winner)

Tramp! tramp! tramp! the boys are marching.

Music helped the boys when they were in war; it cheered them and made their burdens lighter.

Men are generally considered the brains of the professional world and business world. The ordinary routine of a business man is conducive to a mental or nervous breakdown or disorder.

Music is daily being more generally adopted by the medical men as a cure of the nerves. Now if the youth of to-day is taught to play, or at least appreciate music, will not the "brains" of the future be more efficient and better safeguarded?

But aside from this it is a boyhood trait to be crude and rough. Will not the refining influence of music help to bring out that other side of his life? And if this influence is regularly injected into his daily routine, nothing but a well-balanced cultured and refined personality can result.

CATHERINE E. DEISHER (Age 11),
Penna.

MUSIC FOR BOYS
(Prize Winner)

A few years ago some boys of our town would meet at some particular place at night and make raids on the rutabaga patch of an old man, and on other gardens.

The next spring a music teacher and his wife moved to this town. The man gave lessons on the violin and saxophone, while his wife gave piano lessons. The next year the music teachers moved away. Most of us boys did not quit practicing altogether, however, and now we have organized an orchestra. We meet two or three times a week. This is not a jazz orchestra but a Sunday School orchestra and we play every week in Sunday School.

Therefore, music has not only stopped our boys from stealing, but it is helping us to prepare for the world into which Mr. Presser recently passed.

HARRY SEMINGSON (Age 14),
North Dakota.

MUSIC FOR BOYS
(Prize Winner)

As a little girl I believe it is a wise plan for parents to give their boys a musical education. Some boys have exceptional talent for music, and often those who take music lessons find their talent and improve it until they become noted musicians. Music will help the boy to fill a larger place of usefulness in the world and will improve his own mind and heart. Parents who give their sons music lessons are very kind and generous, because such studies are costly. All boys receiving a musical training should be grateful and ought to prize highly their wonderful opportunity, especially since some children would just be delighted to receive music lessons but cannot afford it because they are poor. I wish that all boys could take music lessons, because I know music will help boys to become men who appreciate the finer and nobler things of life. RUBY HAMBLIN (Age 11).

A Guide for Teachers

Piano Teachers, especially those starting classes for the first time in fall, will do well to examine this material for dependable suggestions for these courses

ANY OF THIS MATERIAL MAY BE HAD FOR EXAMINATION THROUGH

THE "ON SALE" PLAN

Enjoy the convenience of this plan. Teachers may select numbers from any of our lists and catalogs or we will cheerfully make up packages covering desired grades. Numbers not used are returnable.

Start the Young Student With

BEGINNER'S BOOK—School of the Pianoforte—Vol. 1
By THEODORE PRESSER — **PRICE, $1.00**

This is a genuine "first reader" for the piano. It is without doubt the most extensively used elementary piano instruction book and covers in a most pleasing and thorough manner the first grade of study up to, but not including, the scales. Large notes are used and the grading is so gradual that the pupil advances without discouraging difficulties being introduced at the wrong time. Little pieces and duets included in the work serve to entertain as well as reward the child for progress.

First Study Can Be Pleasingly Varied With

FIRST GRADE STUDIES for the PIANOFORTE
By L. A. BUGBEE — **PRICE, $1.00**

This set of studies is unusually popular and has on its own merits attained success. All the exercises are original and are practically melodious pieces with teaching points. Some have accompanying text. These studies may be taken up after the first few rudimentary lessons.

GENERAL STUDY BOOK
By MATHILDE BILBRO — **PRICE, 75 Cents**

A very interesting collection of material for elementary students. Little solo and duet pieces serve to teach many important things to the young pianist.

MIDDLE C, AND THE NOTES ABOVE, AND NOTES BELOW
By LIDIE AVIRIT SIMMONS — **PRICE, 75 Cents**

In addition to learning the notes and naming them in this book, the pupil writes them also and then plays a dainty study, exemplifying each new step.

Continue Progress in First Grade Using

STANDARD GRADED COURSE of STUDIES—Grade 1
By W. S. B. MATHEWS — **PRICE, $1.00**

This "original" graded course has been the "backbone" of thousands of music teachers' curricula and, although it is well to start the child student with an elementary instructor before taking up these more serious studies, the first grade of these studies may be used to start the older pupils. The material has been selected from the best composers and the pupil completing the first volume has been introduced to scale and chord study.

STUDENT'S BOOK—School of the Pianoforte—Vol. 2
By THEO. PRESSER — **PRICE, $1.00**

For the child this is the logical sequel to the "Beginner's Book." It takes up the subject just where the "Beginner's Book" stops and progresses through various phases of technic to a complete treatment of the scales up to and including four sharps and four flats.

EASY STUDIES IN EASY GRADES
By MATHILDE BILBRO — **PRICE, 75 Cents**

An album of fifty short studies, in which mechanism, touch, rhythm, dynamics and tone production are all exemplified in an interesting manner. For students finishing the first grade and entering the second.

Works Covering in Detail Various Phases of Study in a Number of Grades

SCALES

Album of Scales — **Price, 75 cents**

There are 23 pieces or studies in the form of pieces in which the scales are generously introduced. The value of practicing them in this attractive form and in the variety of rhythms and harmonies that naturally occur can be appreciated readily. Pupils handling third-grade material are just ready for this study work.

Mastering the Scales and Arpeggios
By JAMES FRANCIS COOKE — **Price, $1.50**

A complete and exhaustive treatment that enables the teacher to start scale study with very young pupils and carry it on to the highest degree of proficiency with advanced pupils.

OCTAVES

Album of Octave Playing — **Price, 75 cents**

This excellent album—a companion volume of the albums of Scales and Trills—helps the piano student to master octave playing in a pleasant manner. In place of being confronted with page after page of dry octave studies, the pupil finds here interesting pieces which present this phase of piano technic in various portions of the composition. The first material in this book makes it possible to present it to pupils in the early first grade.

First Studies in Octave Playing
By THEO. PRESSER — **Price, 80 cents**

This album takes up all phases of octave playing in an interesting manner, and may be used in the third and fourth grades.

TRILLS

Album of Trills — **Price, 75 cents**

Each of the eighteen pieces in this album contains some form of the trill, and the use of this volume with medium grade pupils will be found by teachers to be the most desirable means of perfecting their ability to handle this valuable technical device.

The Trill—New Gradus, Part 7
By I. PHILIPP — **Price, $1.00**

A compilation of original and selected studies for perfecting the trill. These are excellent exercises for the development of touch, and for training in the collaboration of ears, eyes and fingers.

TIME DIFFICULTIES

Playing Two Notes Against Three
By C. W. LANDON — **Price, 80 cents**

Exercises in Time and Rhythm
By E. A. HEPLER
Price, 60 cents

Rhythm and Technic
By M. GREENWALD
Price, $1.25

Melodious studies in second and third grades.

A 24-page Booklet giving Practical Advice upon *How to Begin Teaching, How to Secure Pupils, What to Do as the Pupil Advances, What to Use and How to Grade Pupils* will be sent Gratis to Any Teacher or Prospective Teacher Desiring It. Just ask for "Guide to New Teachers on Teaching the Piano."

OSSER

Arthur Honegger, one of the most solid but dar-
ing of the younger French composers, has won a great success with "Judith," his first musical work for the stage. The libretto, by Rene Morax, gives intense action to the story of the saviour of Bethulia; and Honegger is said to have treated the subject "lyrically, simply and broadly." Though usually as French, and coming into notice "The Six," he really is of Swiss is "Pacific 231" for orchestra has name familiar to Americans.

ovent Garden Opera Season the evening of May 12, with Bruno nducting a performance of Mozart's of Figaro." The serious strike con-ained the royal family and all mem-e cabinet, so that the performance ch of the gaiety usually noticeable ing night.

"Castle Agrazant," a grand opera by Ralph Lyford, the American composer and conductor, had its première at Cincinnati on April 29, and was repeated on the following evening. The performances took place in the Music Hall made famous by the great May festivals, and the work was received enthusiastically by the large audiences, while the composer came on the stage to receive ovations from music-loving Cincinnatians. This was the first of a series of premières of American operas planned by the American Opera Foundation of Cincinnati; and critics predicted its permanent success.

Fritz Busch, musical director of the Dresden Opera, has accepted an invitation to conduct the New York Symphony Orchestra for a guest period of five weeks, beginning March 7, 1927.

Percy Grainger has been commissioned to write an orchestral work for the North Shore Festival of 1927. He will receive the one thousand dollars usually offered as a prize, and the competition will be abandoned for this year. The composer is left to choose the form of his work. The commission comes as a recognition of Mr. Grainger's part in these festivals, he having appeared at nearly all recent ones either as pianist, as conductor, or as a composer.

DEEMS TAYLOR

Deems Taylor's "The King's Henchman" (written on a special commission from the management), Puccini's posthumous "Turandot," and Casella's ballet, "La Giara" (The Jar), will be the novelties of the next season of the Metropolitan Opera Company. Welcome revivals will be Mozart's "Magic Flute," Beethoven's "Fidelio," and Thomas' "Mignon." Mr. Taylor's opera will make history, in that it will be the first serious musical work for the stage written by an American composer through a direct contract from a major operatic organization.

The Ohio Federation of Music Clubs, the Ohio Music Teachers' Association, and the quarterly board meeting of the National Federation of Music Clubs met simultaneously and jointly in Cincinnati, April 27-30.

Giulio Gatti-Casazza, having already served seventeen years as general manager of the Metropolitan Opera Company, has had his contract extended for a period of another five years.

The Fiftieth Anniversary of the Wagner Theatre, at Bayreuth, will be celebrated on June 25—but at Weimar. The Bayreuth season is abandoned for this summer.

Ohio Northern University, at its June Commencement, conferred the degree of L.L.D. (Doctor of Laws) upon James Francis Cooke, Editor of THE ETUDE, "For unusual ability and marked attainments in Public Affairs." In addition to his work in the field of music, Mr. Cooke has for many years been active in other fields, including business, patriotic service as a speaker and special investigator during the Great War, literature, the drama, and in philanthopic and financial matters as president of the Presser Foundation

The "Jubilee" of the London Bach Choir was celebrated by four choral concerts: May 10, Bach cantatas and piano concertos; May 11, unaccompanied motets, piano and organ solos by Bach; May 13, Parry's "Blest Pair of Sirens," Vaughan Williams' "Sancta Civitas" (first London performance), and Brahms' Alto Rhapsody; and on May 14 a performance of the great Mass in B Minor. Dr. Vaughan Williams conducted.

Monteverdi's "L'Incoronazione di Poppaea (Coronation of Poppaea)" was performed for the first time in America at Smith College, on April 27 and 28. The production was sponsored by the Department of English, with all local singers excepting the interpreter of *Nero*. Aside from a revival in Paris, in 1905, by the Schola Cantorum, under Vincent d'Indy, this was the only performance the work has had since last given in Italy in 1643.

A New Symphony by George Antheil, an American composer who has been for two years in Paris, and which work has lately heard in that city, has been accepted by Walter Damrosch for performance next November by the New York Symphony Orchestra.

A Handel Festival, sponsored by workingmen's choral organizations and with popular priced admissions, will be held at Leipsig this fall. There will be performances of the opera "Tamerlane," the oratorios "Samson" and "Herakles," to which will be added one orchestral and one chamber concert.

The Optophone, a new and remarkable instrument which turns printed words into musical notes and enables blind persons equipped with headphones or loud-speakers to read them at a rate of eighty-five words per minute, was demonstrated at the Optical Convention at the Imperial College of Science and Technology at South Kensington, England, recently.

"Turandot," Puccini's posthumous and unfinished opera, had its world première at La Scala, Milan, on April 25, under the direction of Toscanini. The performance is reported to have been one of the most brilliant events in the history of this famous opera house. Following a request of the composer, at this first performance only the parts which he had finished were given, though future productions were to include the last scene as written by Alfano.

The New York Philharmonic Orchestra and the Philadelphia Orchestra have announced slight advances in the prices of seats for the next year series of concerts; this to take care of additional expenses made necessary. The New York Symphony Orchestra also announces that it will have a third conductor to coöperate with Walter Damrosch and Otto Klemperer.

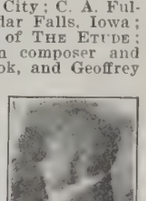
Principal Musician Samuel Firth, of the United States Marine Band, who has played before seven presidents of our country and has been awarded seven good-conduct medals, has been retired after a service of thirty-three years.

Five Prizes of 2500 Lire, one each in Composition, Piano, Singing, Violin and Harp, are offered in connection with the Master School for Americans at Villa D'Este Tivoli, Italy, patronized by the Italian Government. Particulars from Elizabeth Gibbs, Hotel Weylin, 40 East 54th Street, New York City.

It is the constant ambition of the editors and publishers of the "Etude" to make each issue of the journal worth many times more, in practical instruction, stimulating inspiration and real entertainment, than the price of the entire year's subscription. The music lover can not possibly find a better two-dollar investment.

FREDERICK STOCK

A Frederick Stock Scholarship Fund has been organized by friends of the Chicago conductor and has already received substantial gifts. It is to be used to assist in the education of players of the less usual instruments of the orchestra. A committee of influential persons has the movement in charge; and so long as Mr. Stock remains with the Chicago Symphony Orchestra he is to designate the beneficiaries of the trust.



Jascha Heifetz has been decorated with the Cross of the Legion of Honor on his return to Paris from an extended tour through Palestine. While in the Holy Land the eminent violinist played gratis programs before many audiences. At one of these the recital was given out of doors and before a gathering of ten thousand people. A strong movement is now in progress to develop the musical art of Palestine.

Jazz, by a recent report, has been proscribed by the leading opera houses of Italy. Counter to this comes a statement from a professor of the Music School of Harvard University asking caution in the criticising of its use by composers.

Vladimir de Pachmann recently gave a special concert in Rome, the proceeds to found a scholarship for the best American student at the Villa d'Este, where the Italian Government has sponsored a school for talented students native of the United States, similar to the institution founded by the French Government, at Fontainebleau. All of which movements are to be greatly appreciated as of the most valuable service to the world's musical art.

The Tipica Orchestra of Mexico should be welcomed this fall on its first tour east of the Mississippi. Its programs of Mexican-Spanish music should be greatly attractive to all those interested in the study of the tone art—and certainly will be more beneficial than jangling jazz!

The National Educational Association will hold its annual convention in Philadelphia from June 27 to July 2. June 29th will be Music Day, and among the speakers will be George H. Gartlan, Director of Music, New York City; Father Finn, Director of the Paulist Choristers, New York City; C. A. Fullerton, Director of Music, Cedar Falls, Iowa; James Francis Cooke, Editor of THE ETUDE; John Philip Sousa, American composer and bandmaster; Mrs. Edward Bok, and Geoffrey O'Hara.

ÉTIENNE MÉHUL

A Statue of Mehul, composer of "Joseph" and other operas, was dedicated on May 30th, at Givet, the composer's place of birth. It replaced one destroyed by the Germans during their occupation of the Ardennes, and the ceremonies were conducted with the participation of the leading musical organizations of France. Organist of a convent at ten, he started to study to be a church musician; then at sixteen he attended a performance of "Iphegénie en Tauride," and became a disciple of Gluck, who persuaded him to turn to opera composition.

Cadman's "Shanewis" is to be performed at the Hollywood Bowl, in the latter part of June, with Os-Ke-Non-Ton, the Mohawk baritone, as *Philip Harjo* and Princess Tsianina, the Cherokee mezzo-soprano, in the title rôle. Cadman wrote the opera for this Indian singer, whose own life story furnished the germ of the plot.

A New Mozart Symphony is reported to have been found in the archives of the Benedictine Monastery at Labach, Upper Silesia, and to have been performed for the first time at Vienna, by the Institute of Historic Music on April 20. The symphony is in G minor, has three movements, and was presented by Mozart to the abbot of the monastery on January 4, 1769, when the composer was but thirteen years old.

THEODORE PRESSER CO. MUSIC PUBLISHERS AND DEALERS
1712-1714 CHESTNUT STREET - PHILADELPHIA, PA.

The Etude Music Magazine

Educational Service Department

This new Department, organized by the Theodore Presser Company, in connection with THE ETUDE MUSIC MAGAZINE, is a logical development of the service that this Company has been conducting for years.

The staff of experts, now retained regularly at the home office of THE ETUDE MUSIC MAGAZINE, includes specialists of international reputation, graduates of leading American Universities, and musicians trained in foremost European conservatories.

No charge of any kind whatsoever is made for this service.

The Department is distinctly not a musical correspondence school. It is designed for *emergency* information upon questions pertaining to teaching problems, musical material, study problems in musical theory, musical history, technic, and items of general musical interest. It will concern itself almost exclusively with those problems which cannot be answered through the columns of THE ETUDE. It will have the coöperative assistance of renowned musicians in all branches of musical art.

It will NOT attempt to answer questions that obviously deal directly with examinations prepared for the benefit of the student, and which should be answered by the student.

It will NOT state the relative standing of artists, teachers or schools; but of the last two it will supply lists of individuals and institutions with which the inquirer may correspond and then form his own opinions.

It CANNOT undertake to choose musical instruments nor to state their comparative qualities. It will, however, furnish lists of reliable makers.

It CANNOT appraise the value of violins, by mail.

It CANNOT undertake to write essays or papers, nor can it prepare elaborate recital programs; but it will be glad to recommend books and former ETUDE articles from which authentic materials for such purposes may be obtained.

Make all questions short and to the point. In requesting information regarding pieces in particular grades, kindly use the "scale of ten" as employed in the "Guide to New Teachers," a copy of which will be sent gratis upon request.

If possible, confine the questions intended for this Department to one sheet, and be *sure* that your *name* and *address* appears on *this sheet*.

Questions relating to business matters, or to other interests of THE ETUDE, should be placed upon another sheet.

Notwithstanding the immense volume of our correspondence, it is our ambition to answer all letters with the greatest possible dispatch, courtesy, accuracy and completeness.

All letters should be addressed to THE ETUDE MUSIC MAGAZINE.

At the top of the sheet bearing questions, place in a bold hand:

Etude Educational Service Department

This will greatly help us in separating correspondence for this Department from that intended for our regular business, and thus will insure to you a more prompt reply.

The Educational Service Department

THE ETUDE MUSIC MAGAZINE
1710-1712-1714 Chestnut Street Philadelphia, Pa.

Make Your Summer Spare Moments Enjoyable and Profitable

With These Books Every Music Lover, Teacher and Student Can Acquire a Wealth of Music Knowledge by Utilizing Available Time in Pleasurable Reading

Books for Pianists and Lovers of Piano Music

What to Play—What to Teach

By Harriette Brower **Price, $2.00**

A very absorbing work. Miss Brower in an interesting and instructive manner discusses pianoforte material from the first beginnings of the work of the great pianists, and the material is grouped in program form.

Great Pianists on Piano Playing

By James Francis Cooke **Price, $2.25**

Everyone interested in piano playing, who has not read this very popular book, should secure it immediately. This is a group of study conferences with 28 virtuosi, in which are presented the most modern ideas upon the subjects of technic, interpretation and expression. Full page portraits and short biographic sketches are also included.

Principles of Expression

By A. F. Christiani **Price, $2.50**

This is an authoritative book on pianoforte playing. Practically all explanations are illustrated clearly by musical examples. The study of this work gives a full understanding of rhythmical accents, metrical accents, melodic accents, harmonic accents, dynamics and time.

Basic Principles in Pianoforte Playing

By Josef Lhévinne **Price, 60 cents**

This work tells how to do many things in piano-playing, stressing touch, tone and accuracy. Practice hints are given. Paper bound.

Piano Playing with Piano Questions Answered

By Josef Hofmann **Price, $2.00**

This is virtually two books. In one, close to 100 pages are an illustrated group of suggestions on artistic piano-playing by one of the greatest living pianists. It also answers direct, 250 questions asked by piano students. A valuable work for reading or reference.

Well-Known Piano Solos—How to Play Them

By Chas. W. Wilkinson **Price, $2.00**

Works of modern masters are well represented in this book, along with the favorites of the old masters. Around 100 solos are covered. This is an essential work for the pianist's library.

Master Lessons in Piano Playing

By E. M. Bowman **Price, $1.50**

Contains vital suggestions in artistic pianoforte playing, presented in the form of "Letters From a Musician to His Nephew."

Descriptive Analyses of Piano Works

By Edw. Baxter Perry **Price, $2.00**

Instead of working out each analysis upon the structural basis, Mr. Perry has given a poetic, dramatic and historic analysis or description of some of the greatest and best-known piano compositions. This treatment adds to a better understanding of each work or its interpretation.

Celebrated Pianists of the Past and Present

By A. Ehrlich **Price, $2.50**

One hundred and fifty portraits and biographies of European and American pianists of the past and present. A most reliable biographical work.

Pianoforte Music

By J. C. Fillmore **Price, $2.00**

Pianoforte Study

By Alex. McArthur **Price, $1.50**

Hints on piano-playing given in an interesting manner.

The Pedals of the Pianoforte

By Hans Schmitt **Price, $1.25**

Books for Followers of the Vocal Art

How to Succeed in Singing

By A. Buzzi-Peccia **Price, $1.50**

An excellent volume by a Master Voice Teacher, who offers valuable advice and suggestions regarding methods, teachers, students, engagements and other features of the vocal art as a profession. Those looking forward to achieving success in a lyric career will get from this book a new light on these subjects in their pursuit of the devious roads to success. In presenting this contribution to the vocal world the author employs his own superb qualifications and a distinct style in writing as a background.

Great Singers on the Art of Singing

By James Francis Cooke **Price, $2.25**

Most of the celebrated vocalists of the past 25 years are represented in this volume of advice and vocal experience. There are 27 full page portraits and biographies given. This is a work of absorbing interest to all music lovers and followers of the vocal art.

What the Vocal Student Should Know

By Nicholas Douty **Price, $1.00**

This book has obtained great favor because it tells in a concise manner many important things that the vocal student should know. As a conclusion of the work Mr. Douty has given a series of excellent daily exercises for each voice.

Diction for Singers and Composers

By Dr. H. Gaines Hawn **Price, $1.75**

This book covers an important side of the vocal art, and to have true vocal art as well as song writing art, one should follow the advice and suggestions Dr. Hawn gives in this helpful work.

Choir and Chorus Conducting

By F. W. Wodell **Price, $2.00**

There is much opportunity in the field of choir, chorus and community singing, and orchestra conducting. This book offers profitable information in the preparation of the musician to accept these opportunities.

Books of Special Interest to Music Teachers

Mistakes and Disputed Points in Music and Music Teaching

By Louis G. Elson **Price, $1.50**

Those many subjects, regarding which there frequently are disagreements, are straightened out by the positive information in this book, which covers all the essential points from acoustics and notation to piano technic and orchestration.

The Education of the Music Teacher

By Thos. Tapper **Price, $1.75**

Those who aspire to conduct their profession with knowledge and proficiency, should read this excellent book by Mr. Tapper.

Stories of Standard Teaching Pieces

By Edw. Baxter Perry **Price, $2.00**

With the information in this book teachers can provide that touch of romance, anecdote and educational information that gives zest to the lessons upon standard teaching pieces.

How to Teach—How to Study

By E. M. Sefton **Price, 60 cents**

The best teachers are endeavoring to improve their methods of imparting knowledge. This work deals with the fundamental and unchanging laws for obtaining the best work out of pupils.

Books for Young Music Students

Young Folks' Picture History of Music

By James Francis Cooke **Price, $1.00**

This is a very recent offering, over which teachers everywhere are enthusing. The high lights of musical history and biography are given in an interesting style that is understood easily by the juvenile. Such a work as this tends to hold the child student's interest in music. A most liberal number of well-printed and interesting pictures are given for the pupil to cut out and paste in the places provided throughout the book. The author has even gone so far as to explain to embryo musicians the manner in which melodies are written, stimulating their original ideas along these lines.

First Studies in Music Biography

By Thos. Tapper **Price, $1.75**

The thinking teacher sees to it that pupils learn as soon as possible something about the lives of great musicians. This book is designed for the teacher to use with pupils. With each composer is given a portrait, other illustrations and a set of questions on the text.

Pictures from the Lives of Great Composers

By Thos. Tapper **Price, $1.50**

While various composers' biographies form the center of this work, there also is woven delightfully around each biography, contemporaneous history. This gives the child vivid impressions of the great composers.

Music Talks with Children

By Thos. Tapper **Price, $1.50**

Although it is suggested by the author that the chapters of this book be made the subject-matter for talks with children, they are written in such a simple straightforward manner that they may be read verbatim by the teacher or parent.

Betty and the Symphony Orchestra

By Elizabeth A. Gest **Price, 10 cents**

This little illustrated booklet is a delightful story for acquainting little folks with the principal instruments of the Symphony Orchestra.

Imaginary Biographical Letters from Great Masters of Music

By Alethea Crawford Cox and Alice Chapin **Price, $1.50**

This fascinating little book gives a charm of romance and personality to musical biography by the unique manner in which the information is imparted.

Child's Own Book of Great Musicians

By Thos. Tapper **Price, 20 cents each**

A series of Biographies with picture placing and binding to be done by the young student. A separate book for each of the following masters:

Bach	Beethoven	Mozart	Mendelssohn
Schubert	Haydn	Schumann	Wagner
Handel	Verdi	Chopin	Grieg
		Liszt	

Sold Separately

These little booklets are used with great success by many teachers. After the child has read or studied the biography told so clearly, the child writes in his or her own fashion the story of the great composer in the space provided in the back of each of these booklets. This, with the pasting of pictures and binding as mentioned above, really brings about the making of the "Child's Own Book."

Petite Library

By Edw. Francis **Complete, $3.00**
Each, 40 cents

Pocket biographies of Handel, Haydn, Weber, Mendelssohn, Mozart, Beethoven, Chopin, Liszt and Wagner.

Books Every Music Lover Will Enjoy

Great Men and Famous Musicians On the Art of Music

By James Francis Cooke **Price, $**

This interesting volume gives intimate cussions of phases of musical life and music study by some of the world's grea intellects. JULY, 1926 | Single Copies 25 Cents | VOL. XLIV, No. 7

Our Own Musical To-Morrow

Our musical to-morrow is based upon our musical to-day. The great problem of making America a musical nation is being solved faster than we realize. The responsibility for the solution rests upon the students and the teachers of America. The Nineteenth Annual Meeting of the Music Supervisors' National Conference, held in Detroit from April 12th to April 16th, was a revelation to the more than two thousand teachers who attended the conference. It is hardly believable that that enormous group is the result of a movement founded less than two decades ago by Mrs. Frances E. Clarke and P. C. Hayden, in Keokuk, Iowa.

The long procession of meetings, from early morning until late at night, made up the least impressive part of the routine of the convention. Remarkable as were many of these gatherings, dealing largely with musical education in the schools, there were certain events which stand out far above the other achievements.

The magnificent Detroit Symphony Orchestra, under the direction of the eminently able Ossip Gabrilowitsch, played superbly. Mr William H. Murphey, who has sponsored the orchestra and orchestra hall for years, attended the concerts regularly. Quiet, unassuming and cultured, this prominent Detroit business man, who is also a gifted musician, has given the people of his city one of its greatest educational blessings. Not satisfied with the work of providing an orchestra for the aristocratic citizens able to pay for seats, he engaged Miss Edith Rhetts to undertake the great task of developing the taste of young people, with a veiw to providing for future audiences. Thus, twenty-five thousand children have heard the orchestra during the past year, entirely without cost to the community. Miss Rhetts has supervised this great work and is responsible for the vast throngs of little folks that hear the orchestra regularly.

More astonishing than that Detroit Symphony in its educational significance was the performance of the National High School Orchestra, composed of young high school students from all parts of the Union. This orchestra of over two hundred and fifty performers commenced its rehearsals on April 12th, and on April 16th gave a program in Orchestra Hall under the bâton of Ossip Gabrilowitsch, assisted by Joseph E. Maddy, playing with a finish and refinement and force hardly credible to one who had not heard it. The First Movement of Beethoven's "Eroica Symphony" was one of the numbers. Mr. Gabrilowitsch, in congratulating the highly trained and gifted performers, indicated that the future American Symphony Orchestras need not worry about performers when America is developing such an astonishing group.

So epoch-making do we consider this performance of the first session of the National High School Orchestra (which can only be assembled at such meetings as this, when the students are brought together under the direction of their teachers who come from all parts of the United States to attend the conference) that we believe the participants should have individual recognition for their part in this historical event. For this reason we are printing the names of those who played upon this memorable occasion:—

The President of the conference was the very able Edgar B. Gordon, of the University of Wisconsin. He will be succeeded next year by George Oscar Bowen of Tulsa, Oklahoma. The Treasurer is A. Vernon McPee of the State Teachers' College of Johnson City, Tennessee, who will be glad to answer questions about membership in this important organization. Our musical to-morrow is in the hands of many important and effective groups; but none is of more consequence than the organizations of music supervisors which, together with the Private Music Teachers of America, have the serious responsibility of educating the youth of the New World.

One Hundred and Fifty Years

HERE we are sitting in a building on the very street in Philadelphia where one hundred and fifty years ago Washington, Jefferson, Franklin, Hopkinson and others decided that the United States of America should become free and independent. Notice that array of Anglo-Saxon names. Their very British ancestry made it impossible for them to fail to resent the control of a government which at that time was oppressive and obnoxious. America as an independent country owes a great debt to George III, and others, because the conflict was not with England or the English people but with the particular kind of Government that England had at that time. If George III and his followers had seen things a little differently, we might all now be singing *God Save the King* instead of *America*.

There seems to have been an impression in some parts of the world that our constitutional forefathers were men who lacked culture and education. Quite the opposite was true in most instances. Washington, Jefferson, Franklin and Hopkinson were all very much interested in music and believed that it should be given a prominent place in the development of the life of the American people. It is fitting that, at the Sesqui-Centennial, Music should play an important part. The greatest statesmen of the ages almost invariably have recognized its cultural worth.

The "Etude" is issuing, "gratis," a handsome Souvenir Sixty Page Booklet, "Two Centuries of Musical Composition in America," containing sixteen pieces of music and the portraits of over three hundred American Composers. A complimentary copy will be sent to any "Etude" reader, upon postal request.

Why the World Needs Music

An Interview Secured Expressly for THE ETUDE with the Eminent American Statesman, Author and Divine

HENRY VAN DYKE

Biographical

Honorable Henry Van Dyke was born at town, Pennsylvania, November 10, 1852. her, the Rev. Henry Jackson Van Dyke, ell-known Presbyterian clergyman. The rly education was received in Brooklyn. luated from the Polytechnic Institute in n in 1869, and from Princeton in 1877, received his Master of Arts Degree in After graduating from the Princeton ical Seminary in 1877, he then attended versity of Berlin, 1877-1879. This has llowed by a long train of academic dis- from the great universities of Europe United States. He was ordained a Presbyterian clergyman in 1879, afterwards holding many pastorates, the most noted probably being that of the Brick Presbyterian Church, of New York (from 1883 to 1900). In 1900 he became Professor of English Literature at Princeton. He was United States Minister to Holland and Luxembourg from 1913 to 1917. He then became a Chaplain in the United States Navy for the remainder of the World War. Dr. Van Dyke published volumes of essays, poems and other works, forming a list that in solid, fine type takes a large part of a column in "Who's Who in America." No American has produced uniformly so many works which have met with such wide reception from the great literary authorities and the public as well. His individual and distinctive style, radiant with warm human feeling and high spiritual ideals, has been a joy and an honor to all who revere the highest in American letters. This conference was held in Dr. Van Dyke's magnificent old Colonial residence at Princeton. We only regret that it is not possible to transfer our readers in person to his genial and inspiring presence. Through all his life he has been an enthusiastic music lover and has given his services and influence in promoting the finest in music. Dr. Van Dyke is, without question, one of the leading sponsors for music in our time.

THE PIPES O' PAN

eat Nature had a million words,
n tongues of trees and songs of birds,
t none to breathe the heart of man,
Till Music filled the pipes o' Pan.

—*Henry Van Dyke*

opyright CHARLES SCRIBNER'S SONS—1920

WHY THE world needs music! Doesn't everybody know? Do we have to point out the beauty of the orchid? Can we describe the why and the wherefore of the of the wood violet? Perhaps in our restless life some of us may be passing them by without ne to enjoy these wonderful things as the intended us to revel in them. This much I sic has always been a peculiar inspiration to me. , it has been an inspiration of a peculiarly practi- ter to me. In fact many of the poems which g public seems to have received with the great- nave been writtten under the influence of music. id not have the advantage of a technical train- sic, I saw to it that my daughters were trained It was my habit to ask my daughter, Brooke, me. Her repertoire was quite extensive and as upon the piano the music seemed to free the my mind. Ideas came more freely and sponta- ie words flowed from my pen and I felt in tune thing quite above myself. I am sure that the vorker who lends himself to the bewitching music engages an impelling force quite unlike lse in life.

of the poets have confirmed this. Some like have had musical knowledge and the entire of poetry pays lavish tribute to the art. Lord once told me that he wrote every strophe of his oem, 'Maud,' with a definite melody running s mind. John Milton, the greatest artist among poets, was himself a practical musician. The ets of Elizabethan times were in many instances musical. All the poems in Thomas Campion's book were written to music. The two arts seem . The poet who does not revel in music is ass through a somewhat uneventful existence e little that mankind will identify as immortal. not take very brilliant dialectics to reveal ng having such a potent effect upon the minds workers as music must likewise have a most nfluence upon mankind. Notwithstanding the ttention given to this phase of music, it is ly that the public has even yet come to realize significance. We accept music now as one of mplaces of modern life as we accept the air . If we were suddenly to be deprived of this oy, the world would undergo a kind of soul- impossible to describe.

uld not however mislead ourselves into be- t all music is beneficial. The only usefulness or Jazz is as a kind of safety valve for certain . Jazz is the bursting forth of barbarous, sen- ngs. It is the wild man, smashing through the civilization. Good music on the other hand e the expression of the lofty soul, the trained d the disciplined emotions. When I hear usic I am carried out of myself, not into a aos and dissolution, but into a region of beauty ity which has a divine order. Some music levate and inspire me. Other music soothes.

The Public Attitude

"ONE OF the surprising conditions of the times is the difference in the public attitude toward music and musicians. In my youth, the cultured people had a respect for serious musical workers; but the average man and woman gave musicians their sympathy rather than their appreciation. Not exactly pariahs, they were looked upon as people apart from the rest of mankind. Possibly they deserved this ostracism because of their eccentricities

HON. HENRY VAN DYKE

and their affectations. We now seem to have an entirely different kind of musician. Mr. Josef Hofmann, the eminent pianist, is a man of strong common sense, exquisite feeling and the highest mentality. Paderewski possesses one of the most intelligent, philosophical and well informed historical minds I have ever met. He is not only a great musician, but also a great thinker.

"It would seem that the scope of music has extended so enormously in so many different directions that only the artist with the super-mind and the super-consciousness can rise to the top. Such men and women have no room for nonsense; and it is very delightful to see the old school of eccentric artists fading away. Music is assuming a serious place in general education. Foremost educational institutions throughout the world, that barely recognized music fifty years ago, are now erecting palatial buildings for music study. Music was in the quadrennium of the Greeks, with mathematics. Through all time, learned men have believed that it should have a respected place in educational systems. Dr. Charles W. Eliot, President-Emeritus of Harvard, has urged the need of music in all phases of education for years. How fortunate this is, because music contributes so much to the higher joy of life, the higher understanding. We should remember the words of the poet Wordsworth:

"'Without pleasure we really do not
know how to understand anything.'"

"Only a clergyman can realize what an immense aid music is in the service of the church. I have always insisted that the organist and the choir were quite as important in the worship of God in the church as the clergyman. Those who have to do with the musical services of the church should realize this in all seriousness. If there is no sincerity in the choir loft, there may as well be no preaching in the pulpit. The choir loft and the pulpit must be one in spirit. At the Brick Church, music was always a significant part of the service. I laid great stress upon congregational singing. This is often the only active participation that the worshipers have in the service. If the congregation sang a hymn dolefully or without the proper spirit I used to say: "Please sing with all your hearts and all your voices. Unless you sing heartily, I cannot preach." That seemed to create a bond of sympathy between the pulpit and the congregation, that could not come about in any other way. Sometimes, however, even this did not bring results; and then I used to say, "The reason why you sing so badly is that you are afraid of each other. That is nonsense. You are not singing to each other. You are singing to God."

"When I first took a pastorate I used to announce 'We will never sing a hymn about Hell in this church. If you really believe in Hell, you surely don't want to sing about it. If you don't believe in Hell, why mention it.'

"The religion of fear is happily passing from the churches. Many of the hymns of Watts are very beautiful; but some are little more than travesties. They conjure up veritable chambers of horrors, which in their day may have served to frighten the childish imaginations of certain parishioners. Fortunately such hymns have disappeared from the modern hymn books.

"I like to have a hymn sung immediately before the sermon; and I want it sung heartily. Music is a wonderful opener of the heart. Music seems to relax the overtension and to balance between the human intellect and the emotions. We learn quite as much from our emotions as from our logic. Many of the finest thoughts come to us; they are not deliberately thought out. In music we do not want to be moved by mere physical sensations but by emotions regular and controlled by the deep laws of melody and harmony. That is the peculiar function of good music distinguished from bad.

A Ruling Passion

"I REJOICE THAT music has been one of the ruling passions of my life. As a boy of twelve or fourteen, I used to attend the Philharmonic concerts in Brooklyn, when Theodore Thomas was the conductor. Thomas was my ideal; and when I was at Princeton I used to go to New York to hear his concerts. Later it was my privilege to pay a tribute to Thomas with the following poem:

MASTER OF MUSIC

(In memory of Theodore Thomas, 1905)

"Glory of architects, glory of painter and sculptor and bard,

Living forever in temple and picture and statue and song,
Look how the world with the lights that they lit is illumed and starred;
Brief was the flame of their life, but the lamps of their art burn long!

"Where is the Master of Music, and how has he vanished away?
Where is the work that he wrought and his wonderful art in the air?
Gone,—it is gone like the glow on the cloud at the close of the day!
The Master has finished his work and the glory of music is—where?

"Once, at the wave of his wand, all the billows of musical sound
Followed his will, as the sea was ruled by the prophet of old:
Now that his hand is relaxed, and his rod has dropped to the ground,
Silent and dark are the shores where the marvelous harmonies rolled!

"Nay, but not silent the hearts that were filled by that life-giving sea;
Deeper and purer forever the tides of their being will roll,
Grateful and joyful, O Master, because they have listened to thee;
The glory of music endures in the depths of the human soul."

Copyrighted by Charles Scribner's Sons, MCMXX

"In Holland I had an opportunity to hear much very fine music. The Dutch are a very musical people. Mme. Julia Culp, the famous *lieder* singer, is naturally one of the idols of the people. Mengelberg and Van Hoogstraten are lionized as conductors there, or were before New York stole them for the Philharmonic. I heard some opera in Holland; but I do not care especially for opera. It seems to me a mongrel form of art. I like my music straight and my drama straight.

"It is easy for the writer, particularly the one whose pen runs toward verse, to be lured by the always seductive charm of music. Music has been the subject of many of my works including my stories, *A Lover of Music, The Unknown Quantity* and *The Music Lover.* One section of my published poems includes several poems devoted to music. They are *Music, Master of Music, To a Young Girl Singing, The Pipes o' Pan* and *The Old Flute. The Ode to Music,* which has been set for solo voices, chorus and orchestra by Mr. Henry Hadley, is a poet's attempt to catch in words some of the metres and rhythms of the various musical art forms."

Self-Help Questions on Dr. Van Dyke's Conference

1. What may be the effect of music upon creative workers?
2. Which great English poet was a practical musician?
3. What value may Jazz have?
4. How has the attitude toward music changed?
5. What may be said of the "religion of fear?"

Unnecessary Movement

By George Schan

This fact may safely be accepted: Bodily movement, unless applied through the medium of the fingers (or feet), is useless in piano playing.

The depression of a piano key is accomplished by applying power, either weight (employing the weight of hand, arm and occasionally of the upper body), or muscular exertion.

Now, since the application of weight, or the exertion of effort is, in depressing a key, accomplished through the hand and fingers, any movement of the body that does not directly assist the movements of the hand and arm structures is superfluous.

There are always opportunities for the muscles of the hand and arm to relax. If the muscles of the hand and arm are not relaxed, other portions of the body will move to compensate for the varying stresses and tensions placed upon the hand and arm structure.

For instance, if one does not use a relaxed and freely moving wrist in legato passages, the upper portion of the body will lean forward in an effort to produce accentuations which can and should be produced by wrist and finger movement.

In Defense of Etudes

By E. R. Kroeger

THERE is a tendency on the part of many teachers, to discard entirely giving Etudes to pupils and to substitute pieces for them. Is this wise? What is the purpose of the Etude? It is unquestionably written to solve some sort of problem; usually technical. Cannot the result be obtained by the practice of scales, arpeggios, octaves, and so on? When the interest in scale practice ceases, it is because the work done is entirely mechanical. To be sure, scales may be practiced with all sorts of accents, with shadings of various kinds, with different touches; but even then it is monotonous work. In an Etude, the composer causes the practice to become much more interesting by supporting his scales by chords, or by dividing the Etude into periodical sections, or by modulations to other keys. It may be thus "a sugar-coated pill;" but it causes the practice to be more attractive. For instance, suppose the pupil is given as a task the A minor scale. He works at it faithfully in various ways, for ten to fifteen minutes. But if he takes the seventeenth study of Czerny's Opus 740, he finds such an interesting treatment of the A minor Scale that he can easily put in a half to three quarters of an hour on it, without being conscious of the passage of time.

Scale practice may be considered to be similar to learning the rules of grammar. Etudes are the practical application of those rules to making sentences. Of course Etude practice can be overdone. No teacher of high standing nowadays, compels a pupil to take all of Czerny's Velocity Studies, or the sixty Cramer-Bülow Studies. But that they are of great value to the student, when judiciously selected, can scarcely be disputed. Here are a few statements on this subject made by distinguished authorities: "Despite the great number of Etudes that have been written, imagine for one moment what a desert the technic of music would be without Czerny, Clementi, Tausig, Pischna, to say nothing of the great works of Scarlatti or Bach, which have an effect upon technic, but are really great works of Art." (*Wilhelm Bachaus.*)

"Take the case of Czerny and Cramer. Teachers find themselves turning back to those able Etude writers all the time. Czerny was a contemporary of Hummel and Steibelt, and in their day, Hummel and Steibelt were looked upon as the equals of Beethoven. Now their music is largely a memory; but Czerny and Cramer are both used to this hour. Do not sniff at the man who swears by Cramer, Czerny, scales and arpeggios. He is dangerous only when his vision stops with these purely technical means to an end." (*Ernest Hutcheson.*)

"Technically speaking, Czerny and Bach are of great value in correcting carelessness. In Czerny, the musical structure of the composition is so clearly and openly outlined, that any error is easily detected; while in Bach the structure is so close and compact, that it is difficult to make an error without interrupting the movement of some other voice that will reveal the error." (*Teresa Carreno.*)

"I believe that this matter of insisting upon a thorough technical knowledge is a very vital one. The mere ability to play a few pieces does not constitute musical proficiency. The student's technical grasp should be all-embracing. Czerny is deservedly popular (in the Moscow Conservatory.") (*Sergei Rachmaninoff.*)

"To remedy slovenliness, there is nothing like the well-known works of Czerny, Cramer or Clementi. A conscientious and exacting study of them is good musical soap and water. It washes technic into respectability and technical decency." (*Emil Sauer.*)

It is an indisputable fact that the acquiring of a masterly technic is an absolute necessity to the pianist who is sufficiently ambitious to perform the best piano compositions in a manner and at a speed to do them justice. This technic is the result of years of patient, unremitting effort. All artists who have succeeded state that their success is more largely due to hard work than to unusual talent.

The composer of Etudes is usually a practical pianist, who is familiar with the difficulties to be encountered in the student's endeavors to attain facility; so he writes short pieces which are helpful in mastering the problems which appear. Bach's "Inventions" are nothing else than Etudes under another name, which enable the student to conquer the playing of two and three part counterpoint, so that eventually he may essay the *Well Tempered Clavichord.* Clementi, a virtuoso in his day, wrote his celebrated *Gradus ad Parnassum,* a collection of one hundred studies, which have outlived all his other piano compositions, many of which were at one time considered to be equal to the works of Mozart and Beethoven. Carl Tausig, one of the world's greatest pianists, edited twenty-nine of these studies, and arranged the gressive order. Numbers one and two of th well been called "the pianist's daily bread;" chromatic treatment of the "five finger exercis the basis for the exercises which Tausig wr the title of "Daily Studies."

Now, the question is, can a student of pian omit the practice of Etudes or Inventions, and for them passages from well-known compositi will secure such technical command of the i as is absolutely essential. In examining a n compositions in the first, second and third gr conclusion is that the majority of them have interest in the right hand, while the accompa merely of an harmonic or rhythmic character, the left hand. Consequently, practice of these very apt to make a "one-handed pianist" of The right hand acquires facility, while the gains but little. Also, the figure work is limited in scope, both in pitch and in duration.

Practice of this nature is not sufficient to atta tery of the keyboard. The keys employed by posers of these compositions seldom pass two two flats. Very few students are able enough pose figurated passages into distant keys. H suggestion for the advocates of no Etudes:— curriculum of valuable compositions which wil technic, and advise the public how they are to b in order to reap the desired results. We ha of printed curricula regarding Etudes. The e of master-teachers in all lands has given to t the best selections of them. That they hav satisfactory is indicated by the number of ar have been educated in this way. What the carne and student would like to know is: who has virtuosity without a systematic practice of Etud tions, and so on, and how has it been brought a

"The Keys Sang"

By J. J. Elmer

One of the standards of Victorian novelist "make the piano sing." As a matter of fact t cannot sing, since it is a percussion instrument ent upon a very short-lived tone. Even in instruments the tone dies after a few moments. is achieved by a very dextrous exchange of for another. This in turn is brought about by ger articulation. The tones must meet for an mal part of a second. If the meeting is too sh is no legato. If the meeting is too long, there i Dr. William Mason's plan of having the pupil p slowly, and having the finger sustaining the played lifted very rapidly at the precise mom the succeeding finger strikes "key-bottom," is good a way as possible to insure perfect lega slower the exercise is played and the more ra finger exchange is made (without amateur je the better the result.

This, however, is not what the average layma stands when he says that some performers "n piano sing." What he doubtless means is th player has introduced elocution in his playi means that the player has talked through his He means that the player's fingers have employe and rhythmic patterns, bringing out the musi just as a finely trained actor might say a line so that it would have ten-fold the meaning of t line said by the average brainless barn-storme talking with your fingers. Don't just play a but play it as though it means something.

This is something which can be developed by standing. Even the pupil without a teacher c an investment in such a book as the remarkabl ciples of Expression in Piano Playing" by Cl This at least will enable one to make the fing and talk musically and intelligently.

The musician knows these things instinctiv plays with great ease. Schubert once said: "I alone and not without success, for some of my assured me that the keys sang under my ha voices, which, if it is true, is a delightful comp for I cannot abide that execrable pounding even to distinguished players; for it neither ple ear nor moves the heart."

"Music and poetry have been associated for c music and dance for ages. Yet, it is universa mitted that the highest poetry has never been fully mated to music, and certainly the music generally danced to cannot be classed as the possible form of music."

—Francesco Bi

Beethoven's Piano Sonatas and How to Teach Them

Part III

By PROFESSOR FREDERICK CORDER
Of the Royal Academy of Music, London, England.

'Pathetic), Op. 13, in C Minor

›mitting No. 7 for the present, ›ow you will be impatient to hear this very favorite Sonata. Why ›ry favorite, do you ask? Well, obvious the character of a music the more popular is its ıd pathos being a quality most ressed in serious music, it can be l by all, especially when we are ehand what to expect. By the ; worth while delaying awhile, r this matter. The number of that music can definitely paint ngly small. Pieces are named ıost part quite arbitrarily, and to be satisfied if there is noth- music that distinctly jars with But, a piece low-pitched, minor ›w in pace, at once disposes the leas of sadness; and when this l with moments of pure beauty which we call *pathos* is ir- Nor need these characteristics ›usly in evidence. It is more in with human nature to endeavor › in our moments of keenest sor- return of the emotion giving rength. The art of music lends liarly to this intermittent form ›n; you will not expect to find s Sonata equally pathetic . Even Tschaikowski's Pathetic , the last movement of which is ıbearably grief-laden, has its ›f smiling beauty. And now to

ata commences with an Introduc- ı is a piece of music so contrived on and on, never making a com- nce, or close, in its own key, ıoment when it plunges into the to which it is the prologue. So it ›ne long sentence, or stanza of

Annoying Notation

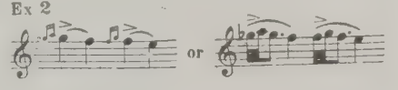
we have a particularly annoying nen of the old-fashioned nota- ı composers, particularly Bee- :d to employ for music of this believe the idea in their minds :n that if the language in which written down were too simple would undervalue it. But, the this is obvious. Musical nota- ely the orthography—the spelling , and no possible end can be puzzling the eye, which is just which has no concern in the have never yet found the human could interpret these hieroglyph- t, so why write one thing when another? What the composer ıy can be perfectly well indicated means; yet people persuade that something is gained by ur quarter-notes in a measure act you are playing eight beats. l that ever lived has started by s opening at least twice too fast; ot write it thus?

Yet if one altered it what a Vandal he would be thought! It would be like phonetic spelling, which sensible people try vainly to get adopted, but which no one can endure.

Well, the upshot of it all is that when Beethoven says *Grave* or *Adagio*, or *Largo*, and the page looks very black, you will have to count two, or four, or even sometimes eight to a quarter-note before you can get at what he means. Silly, but so it is.

Another thing: in such long, slow measures the ear fails—now this is *your* fault —to retain the sounds which have to be indicated by accidentals. How often have I been distressed by hearing a pupil play B♭ instead of B♮ in that opening measure! This is really inexcusable; if you know what a minor key is you should not be able to play B♭ in such a situation, whether the accidental be there or not. But, if you are liable to be misled by your eye, what is the matter with marking in the ♮?

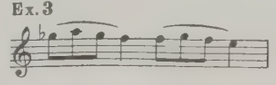
I hope at least that you would not—could not—be so earless, or careless as to play C♮ at the end of the sixth measure, though, again, I have often heard this done by people who will not listen to what they are playing. Notice, please, that the *cadenzas*, as they are called, in measures four and eleven, are no such wild scrimmage of notes as they *look* to be, and instead of getting impossibly fast, as their tails would seem to indicate, really die off in an exhausted kind of way, as such passages always do, and as a singer would sing them (if she could, that is). Cadenzas have no time-value.



The Dot Marks

ON REACHING the Allegro we find ourselves with two minims (or half-notes) in the measure, each of about the speed of one sixteenth-note of the Introduction. The composer has carefully marked a dot on the head of every quarter-note and nearly every half-note. They can hardly be otherwise than detached at this pace, but Beethoven was accustomed to employ the dot to indicate a slight accentuation of the notes. It is rather superfluous. Be sure you play with the left hand held very loose, or the tremolo octaves will sound clumsy, besides proving very tiring.

At measure 31 the right hand has an unusual interval, F♯-A♭. Don't be misled into playing either of the A♭'s as A♮. It has been suggested that at 41 and 45 the short compass of the piano then in use was the reason why the course of the right hand was checked instead of continuing up to A♭ and B♭. That is probably so, but the top notes as they stand sound, I think, better than in the other (inverted) position; so we will have them unaltered. At 52 you will find it most natural to put the left over the right hand; but this causes quite a momentary confusion while you disentangle yourself. Pass the left hand *under* the right and feel how much easier it is. See what we save you! as the advertisements say.



Some people play the *Mordents* at 58-89 *before* and others *on* the beat:

Ex 2

the latter is more according to rule, but at the rapid pace is apt to degenerate into a slovenly

Ex. 3

With the fingering here given the notes can be played with certainty and crispness. At 94 I think it is clearly intended to have a melody in half-notes right up the scale. Consequently the dots here also act as accents, not as staccato marks. Similarly in the left hand. The smooth pair of passages at 111 and 118 I shall leave you to finger for yourself, merely advising you not to shirk using the fifth finger.

The movement is presently most dramatically and effectively interrupted by an unexpected reappearance of the Introduction. It starts in G minor, but after two measures and a half seems to falter, and with an ingenious modulation gets into the unrelated key of E minor. And I want you to watch that modulation and understand it clearly, because otherwise you will give yourself away by playing dreadful wrong notes. If you dare to play C♯ in the middle of 139, I will murder you, if I have to cross the wide Atlantic to do it.

Make a very big *decrescendo* and a *rallentando* also, as you come to the pause, The sudden *Allegro* which follows is made up of the first phrase of the former *Allegro*, alternating with a phrase so very like the principal phrase of the Introduction that I should not mind if you increased the resemblance by playing the three quarter-notes slightly *rubato*: not quite like this, but very nearly.

So Liszt used to do, and he rarely took liberties with Beethoven.

The trills at 177, 185, and so forth, have to be very short; there is not time for much more than a turn. About like this will do.

Ex.4

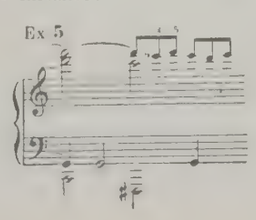
In the Recapitulation there is little to remark, as there are no alterations except in key. One single change has been made by an editor, Von Bülow. In 114 the first note was G, and in 280 he makes it E♭, to match. But Beethoven certainly wrote C and the passages, though nearly parallel, are not quite so; therefore it is not worth while altering it.

Again the conclusion is interrupted by a crash, and again the dirge-like Introduction recurs; but, its first chord having been anticipated, its place is left empty. You will never have the nerve to wait these three long rests correctly. Count steadily "One, two, three, four" *to each* quarter-note; that is, counting in sixteenths. Eighth notes are no good; they are too slow to count evenly. Also bar 301 is slackening its pace all through. You cannot be too broad and solemn in this portion. That over, you may race away with the last eleven measures almost as hard as you can tear. One warning: *not* quite as hard as you can tear; you must always keep a bridle on your Pegasus. The last two measures must be very, very slightly pulled back, to make the impression that you are dealing the piano a smashing blow—a thing no real pianist ever really does, you know; but one has to pretend, sometimes, and that is how it is done.

The Adagio

THE VERY lovely *Adagio* is often played by the unskillful under the impression that it is easy. Nothing in any of the Beethoven Sonatas is easy; this will *always sound beautiful*, however poor the player, but that is quite a different thing.

Just play the first measure two or three times—not straight off the reel, but pausing after each time to criticize your playing. Have you



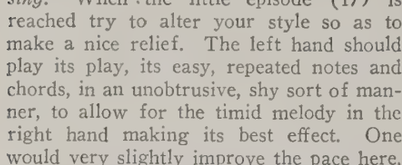
1. Made the melody sing out really like a voice?

2. Kept the middle part soft, even and really legato?

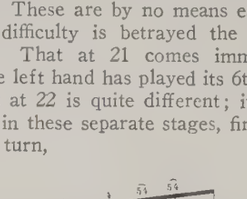
3. Made the bass in exact proportion to the melody?

Finally, can you be sure of doing these three things undeviatingly throughout the movement? If you could you would be the world's finest player, and consequently you have not yet been born. Try your utmost in all these directions and it can still be done better. I cannot go over every phrase with you, as I should at an actual lesson; but there is hardly a measure without some irregularity of fingering, or transfer of notes from one hand to the other, in order to avoid breaking the legato. Like this, for instance:

Ex 5



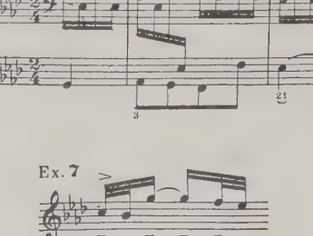
An Unusual Educational Opportunity



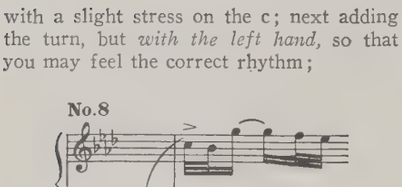
Thousands of ETUDE *readers are reviewing and studying the Beethoven Sonatas through this extraordinarily fine series of articles by Professor Corder. It is our pleasure to announce to our readers that the great virtuoso pianist, Wilhelm Bachaus, has prepared a special lesson upon the "Sonata Pathetique (First Movement)" which will be presented in* THE ETUDE *for next October. The Combination of the analysis presented in this number by a great musical savant, and by the lesson by Mr. Bachaus, to be presented, offers our readers an unusual opportunity.*

When we come to 9, and the music is at the extreme reach of both hands, we shall be driven to all sorts of unfair devices, such as covering up a gap by a momentary use of the pedal. Without a frequent and very skilful employment of this trick, indeed, the piano cannot be made to really *sing*. When the little episode (17) is reached try to alter your style so as to make a nice relief. The left hand should play its play, its easy, repeated notes and chords, in an unobtrusive, shy sort of manner, to allow for the timid melody in the right hand making its best effect. One would very slightly improve the pace here, imperceptibly slackening again at 20, in order not to hurry the grace-notes in 21 and 22. These are by no means easy, and if this difficulty is betrayed the piece is spoiled. That at 21 comes immediately *after* the left hand has played its 6th chord, but that at 22 is quite different; it is best learned in these separate stages, first omitting the turn,

Ex. 6



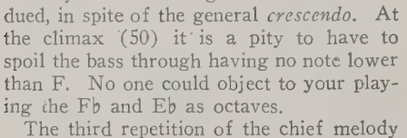
Ex. 7



with a slight stress on the c; next adding the turn, but *with the left hand,* so that you may feel the correct rhythm;

No. 8

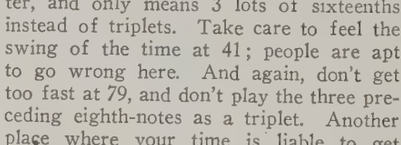
and finally it should be played,



Ex. 9 Correct Rhythm

The trouble here lies in keeping the sixteenth notes of the left hand steady in time, in whatever variety of matter the right hand indulges. This accomplished, there is not much more to worry about. When we come to the second episode (37) the chief difficulty consists in subduing the triplet chords, which even at 42-3, must never be allowed to become noisy. After each *sf* the remaining five must be subdued, in spite of the general *crescendo*. At the climax (50) it is a pity to have to spoil the bass through having no note lower than F. No one could object to your playing the Fb and Eb as octaves.

The third repetition of the chief melody requires the right hand's fifth finger to do its utmost, and consequently the now extensive accompaniment to be subdued to the utmost. Listen, listen, here, till your ears are ready to drop off, and at 67 and 69 keep that left hand loose, whatever else you do. And if you really cannot play the four in 67 evenly against three, why, you must play it as we were taught to do in olden days.



Ex. 10

Now, as to the Rondo. Here Beethoven is inconsistent in the treatment of his grace-notes. He usually places them *upon* the beat, but it is clear that in 5 and 6 they are meant to come *before* it, as the half-notes bear so strong a place in the melody. Similarly the trill in 16 must commence with the lower note, for the same reason. But if you have been playing either of these the other way, do so; it does not matter much.

People are unaccustomed to see a chord written so low on the treble staff as at 22. Don't let it make you play wrong notes. At 30 the notes lie rather awkwardly for the right hand. Play the middle Eb with the thumb of the left hand while you disentangle the right, turning *its* thumb under to C, and you will find it a considerable relief. I think Beethoven would gladly have made the scale at 36 start from Ab had he been able. It certainly sounds better, and only means 3 lots of sixteenths instead of triplets. Take care to feel the swing of the time at 41; people are apt to go wrong here. And again, don't get too fast at 79, and don't play the three preceding eighth-notes as a triplet. Another place where your time is liable to get shaky (or *wonky,* as a young friend of mine calls it) is at 107. Mark the alternate quarter-notes G's and play these six measures a few times replacing the right-hand G's by a group of four sixteenths and you will soon get it steady. Had the passage been written:

Ex. 11

all trouble would have been avoided.

There is little else in this Rondo to warn you against. At 151 (and, of course, the corresponding measure 41 before), having been playing triplets for so long, the sudden change to ordinary eighth-notes is apt to trouble those whose sense of time is not strong, but this a common Beethoven difficulty. Similarly at 193, when you suddenly change to a new rhythm, the same difficulty occurs. A nice, unexpected ending; it makes you think of an animal escaping from a cage. It can hardly be described as pathetic; but no matter. You could make up a story to fit it, and so play it all the better.

Self-Test Questions on Mr. Corder's Article

1. Why is this Sonata so popular?

2. What change would improve the notation of the Introduction?

3. For what purpose (no longer in vogue) did Beethoven place dots over notes?

4. What three particular qualities should be observed in playing the Adagio?

5. In the Rondo, how shall Beethoven's grace-notes be treated?

"Let's Pretend"

By Lucile Collins

Those of us who teach children know that the kind of piece preferred by them is the one with the imaginative title. They are delighted with little pieces that "tell a story." So why give them ones with meaningless titles? As a help in this direction my little pupils have a *"Let's Pretend" Book,* an ordinary composition pad, in which they write little stories of the pieces they study, such as *The Fairies' Carnival,* by Anthony, and *Jolly Darkies,* by Bechter. By "making up" the incidents themselves they not only gain more interest in the pieces themselves but also learn to interpret them in a more musical way.

Make Friends of Your Instruments

By Rena Idella Carver

All students should be inspired to respect and reverence their instruments. How often books and pencils are placed inside the violin case with the violin! Who has not seen pianos laden with story books, coats and hats, pictures and vases?

An understanding of the mechanism of an instrument will create an admiration and love for it. This information may be given during private lessons; but it is often advisable and enjoyable to make it a part of the class meetings or the regular class lessons.

In this work the instructor should have a definite plan. Suppose he has pianoforte pupils. He should first tell them about the mechanism and construction of the modern piano, illustrating this by properly labeled pictures of its many parts. A little theory—such as the laws of the stretched string, etc.—will be necessary. (The player and reproducing actions may also be discussed here, if desired.)

This should be followed by photographs of great artists, showing from various angles the proper position and relation between the body and the instrument. Specific rules for the correct position of the body at the piano, with the reasons should be given. A lucid, concise explanation of the different fundamental touches and their relation to the keyboard and the mechanism of the piano will be most valuable.

Attention should then be called to the proper care of the piano—tuning, atmospheric conditions that hurt the instrument and what may be done to help overcome them, the position of the piano in the room, securing the proper light upon the music, and the ways of judging a piano before purchasing. This will furnish them with a graphic and intelligent resumé of the practical side of this instrument.

Let the teacher next provide them with a brief illustrated history of the piano from the zither and the early claviers, which came into use first as substitutes for the organ, and all the precursors of the modern piano. Pictures should be selected showing the dulcimer (from which the clavichord was derived), the clavichord with a thorough description of it, pictures of the psaltery and its derivative, the harpsichord, and other instruments of this species—all these should be carefully exhibited.

Paragraphs should be devo early makers of these quaint and to the players, teachers and of that day.

The invention of the pianc now be treated. Its makers, su the piano to the earlier instru provements and equal temper pedals, modern improvements pianola and reproducing featu discussed. Then conjectures ab ture of the piano, the mention ments with the circular and boards may be in order.

Composers will be given a biographical sketches of player and teachers of the present wil tively presented. Accounts and p of recitals and concerts attend entered here. Then a list of pianists of the past and present mary of piano literature and with a list of the past and pr posers of each country should b

It will require much researc to obtain this material and i The teacher will use many magazines. The necessary p photographs will have to be ma chased. A duplicating machine writer will assist in making the attractive.

Catalogues of standard make may be obtained from firms and chants. Students who possess will take special interest in th they are given pictures of th ments and those who practice u erings will be greatly pleased to construction. All the material placed in loose-leaf note books s sheets may be added from time

The instructor should secure t of a reliable practical piano repairer for some of the lesso the students will have expert ir If living in a city which has a tory, the teacher should mak ments for the class to visit the f see the actual work of construct

This work will furnish interes rial for quite a series of lesson fully outlined. The same plan n in helping students to secure a knowledge of any other instrum

When You Play That Piece

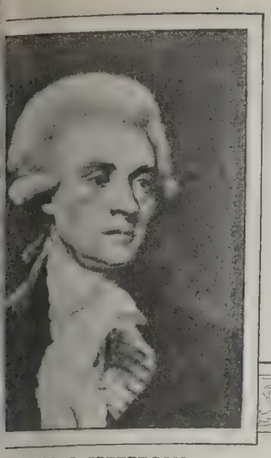
By B. H. Wike

If a person were to stand off and hear himself play he might be surprised at the effect. However, unless he has played for reproduction, he has no such privilege. He must depend upon his own "close-up" hearing or else take criticism from well-meaning friends.

Monotony in tone should be avoided. Any composition with good editing will have sufficient guide marks to represent the composer's intentions, but to interpret them lies with the performer. A good speaker does not give a recitation in a dull sing-song. Neither should music be rendered so. The individual viewpoint has much to do with the playing of a piece. No two people play exactly alike; nor should they. Imitation does not develop individuality, though masters of the art can give valuable suggestions. Not the stealing of another's viewpoint but the investigating and applying it is justifiable. For instance to raise one's hands far in the air above the keyboard for no other reason than that someone else h is both stupid and inartistic.

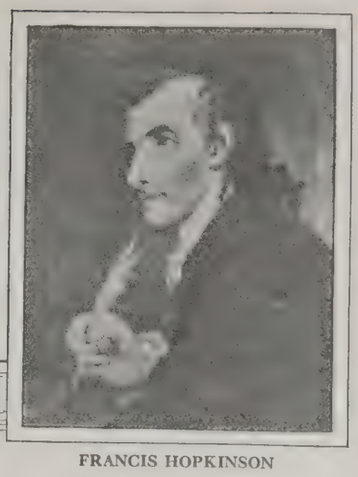
It is necessary to be always on for mistakes. A mistake left u forms a habit which becomes h harder to overcome. Playing w in a composition is not what th expected and will quite likely with the harmony.

A splendid idea is to return after it has been laid away fo Taking it up with new determin leads to drawing out something striking which may have been former readings.



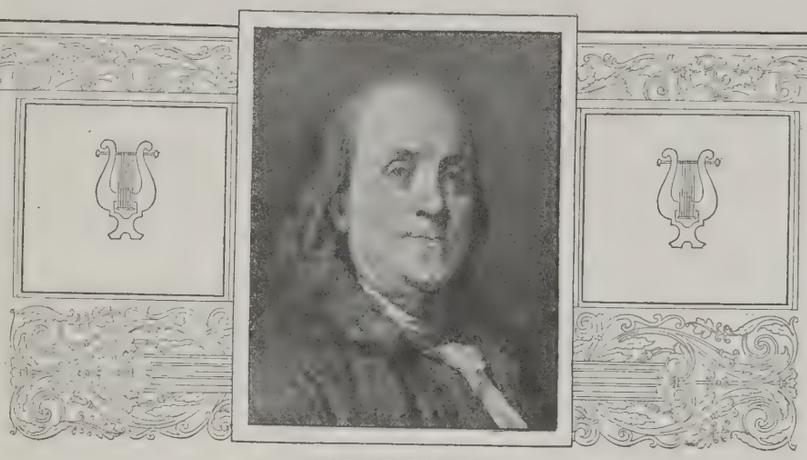
It is well to be careful to use editions of the pieces played. ing very often changes the viewpoint more or less and player to court wrong interpreta instrument, also, must be in tun wise it is impossible to do anythi work. Liszt once did wonders old piano which he admitted at sounded like a tin kettle. How everybody is a Liszt!

Great Men and the Power of Music



By JAMES FRANCIS COOKE

Famous American Music Enthusiasts



(From Great Men and Famous Musicians)

THOMAS JEFFERSON

FRANCIS HOPKINSON

BENJAMIN FRANKLIN

EN the ubiquitous father of ir country was visiting the lightfully quaint Salem Col- North Carolina (at what is now Salem), the Moravian professors innate love for music naturally n to hear one of the charming ly students play upon the spinet. Washington listened with the apparent interest, watching the igers fly over the ivory keys. e music ended, the professors athlessly for his comment.

lady," remarked the General 'I know of something that will l those warts from your lovely

Inspirational Music

MUSIC has been an inspiration ny great leaders in the past is ognized. The late Louis C. persisted in seeing this merry ugh rose-colored glasses, once scinating list of great musical a list that has afforded the ny important suggestions. He his inventory with Ptolemy ither of the bewitching Cleo- ietes signifies "flute lover." He s the only monarch of the past lly had music attached to his kespeare doubtless knew of this ad the Nile Queen say,

some music, moody food of de in love."

A Collection of Flutes

ES died 51 B. C., leaving a of glorious paternity and a ction of flutes, doubtless long l into dust. But, insofar as the story of music is concerned, he a modern. The Chinese, the he Arabians, the Indians, the the Assyrians, the Egyptians, the Greeks had been making centuries before. When these ions sought to preserve their tories in pictures on stone they us care to see that music was represented. The stone hewed of "The Procession of King Assurbanipal," in the British Museum, displays clearly the old triangular harp. The imperial music lovers of remote ages were legion. When the Carnarvon-Carter expedition went down into the Valley of the Kings and at the end of fifteen years of excavation and exploration broke into the gorgeous tomb of Tut-ankh-amen, they found among the three-thousand-year-old relics two sistra, primitive musical instruments which were doubtless known to the children of Israel during their captivity.

A sistrum is an instrument about ten inches long with a bronze or an iron loop-shaped frame supporting lateral bars, upon which were suspended metallic rings. A handle enabled the player to jingle it in rhythm with the music much after the manner of a baby's rattle. Specimens of sistra may be seen at the Metropolitan Museum in New York and in other large collections. These date from the Roman players of the first century after Christ. Indeed, in a great spectacle dealing with the life of Nero, presented by a modern circus, the performers marched around the sawdust hippodrome to rhythms marked by numerous players jingling sistra excavated from the trunks in the tent of the circus property man.

A Fascinating Story

IN all the long and fascinating story of music in its relation to humanity, there is no more absurd figure than that imperial clown Lucius Domitius Ahenobarbus, later known as Nero Claudius Cæsar Drusus Germanicus, born at Antium, Italy, 37 A. D. He spent thirty-one years in tragic and ridiculous cruelties and extravagances, concluding with his one patriotic act, that of committing suicide near Rome.

Nero's official list of murders includes the poet Lucan, his teacher Seneca, his wives Octavia and Poppæa, his stepfather Britannicus, and his own mother Agrippina. It is a trifle difficult to defend music as a moral force when considering the career of this assassin whose chief joy was in the tone art.

Nero took meticulous care of his voice. It is reported that in order to improve his breathing he spent part of the day lying upon his back with a sheet of lead balanced upon his imperial stomach. (How could this excellent bunkum have disappeared from "the old Italian method?") His diet was especially prescribed for his voice. If his tones did not satisfy him he would resort to emetics. He once sang an ode to Niobe that lasted for hours. Desiring to be recognized as a professional rather than as an accomplished amateur, he is said to have accepted private engagements for huge fees. Mr. Elson relates that he was once offered as high as one hundred thousand sesterces, possibly equaling one hundred thousand dollars to-day.

WASHINGTON IN HIS MUSIC ROOM

Although there has been much dispute as to whether Washington actually did play the Flute, the artist has not hesitated to represent it so in this picture.

Nero's Audience

NERO demanded a respectful audience under penalty of death. He posted sentries at the doors to arrest those who attempted to escape his marathon arias. They who failed to applaud the imperial caterwauling were chastised by soldiers in the audience. He is reported to have employed a claque of some five thousand official applauders, who were distinguished by elegant dress and long curls. When Rome burned, Nero, according to the tradition, went to the tower of Macænus and celebrated the event in song.

Perhaps some day a new "super-miracledyne" radio may reach back into the endless past and pick up the long-lost vibrations of the imperial pagliacio of the first century, and we may know what kind of music went with such a monster as Nero.

Minnesingers

IN the Middle Ages many of the Minnesingers and the Troubadours were the foremost men of their day. Alfonso X of Castile William IV, Count of Poitiers, and Richard I of England were royal musical amateurs. King Canute (994-1035) is credited with having written a boat song which remained popular for three centuries. The words are:

Murie sungen the muneches binnen Ely
Tha Cnute Chung reu ther by
Rowe, cnihtes, naew the land
And we thes muneches saeng.

In modern English:

Merry sang the monks at Ely
As King Canute rowed thereby
Row, men, near the land
And hear we these monks sing.

On the continent, Charlemagne was an intense lover of music. His influence upon the establishment of the Gregorian chant is valued highly by historians. Daily he is said to have directed the singing at his court. Henry VIII of England was an able amateur who composed music of great historical and some musical interest. Queen Elizabeth spent a great deal of her spare time at the virginals and is said to have played excellently. She is quoted as having said that she found music a kind of antidote for melancholy.

Louis XIII of France was an accomplished amateur. He is often credited with having written a graceful piece known as *Amaryllis* (which really came from the pen of Baltazarini), doubtless because his Majesty had composed a four-part song with the same name. To one of his citizens, however, America owes a very great

debt. Few know that this citizen was for many years a music teacher. His name was Pierre Augustin Carno, the son of a Parisian clockmaker. Later in life he assumed the name of de Beaumarchais. As an inventor, a financier and as a dramatist and polemic writer, he stands among the immortals of France. His "Le Barbier de Seville," later translated into music by both Mozart and Rossini, is one of the great classics of the stage. Small wonder that the famous music-lesson scene is so deftly handled by a former music teacher. During the American War of Independence he sent America a fleet loaded to the gunwales with ammunition and weapons. This was a most important acquisition for our struggling forefathers. Unfortunately their descendants were so slow in showing their gratitude that Beaumarchais spent his last two years in poverty.

An Imperial Flutist

THE case of Frederick the Great is unusual in many ways. His erratic father demanded that the boy become a soldier and is said to have been frantic when the son took to flute playing. He even threatened to break the flute over the head of the son and hang the teacher. Once, when the irate father was heard approaching the lesson room, the teacher, J. J. Quantz, was so scared that he gathered up his flutes and climbed up the chimney.

Marie Antoinette had unquestionable musical gifts and was devoted to the art. Her teacher was none less than Christoph Willibald von Gluck. Many sovereigns of modern times have been excellent amateurs. Albert Edward, the English Prince consort, played effectively as did Victoria in her youth. The writer once ran across a copy book in Kensington Palace which was said to be in the handwriting of the little Princess Victoria. In this she had carefully copied many musical compositions, indicating the thoroughness of her musical training and the thrift of her royal parents.

Possibly the most distinctive figure among the notable men of the past who was also a professional musician was the Abbate Agostino Steffani (1654-1728). A choir boy in his youth, he became a famous organist, a noted composer of church music of his time, an eminent diplomat, Bishop of Spiga and Papal Prothonotary. He was one of the outstanding diplomatic personalities of the seventeenth century. Incidentally he found leisure to write numerous operas.

Flutists of Degree

IN Germany many men of high positions in various walks of life did far more than merely acknowledge the power of music. Schopenhauer "loved" to play the flute. With Nietzsche music was a passion. His virile views had a notable effect upon Wagner's career. He is said to have known enough of music to do a little innocent composing. Both Goethe and Heine were music amateurs and both provided the music makers with immortal stanzas for their songs.

The present system of harmony, by which certain chords are definitely marked, although in a sense an evolution, was not put into tangible form until Gottfried Weber issued his book on harmony in 1817. Incidentally Weber was a lawyer of renown and Procurator of the State.

In more modern times in Germany many distinguished men have been musical amateurs. Phillip Spitta, who wrote the finest life of Johann Sebastian Bach, was originally a professor of theology. The two men who influenced the work of Robert Schumann perhaps more than any others, were both men of eminence in other callings, who at the same time were famous for their musical achievements. Jean Paul Friedrich Richter (1763-1825), humorist, author, essayist, was also a gifted musician whose music for the stage was really unusual in volume, if not in quality. The other man to inspire Schumann was the genial and benign Anton Friederich Justus Thibaut (1774-1840), Professor of Jurisprudence at Heidelberg University, who wrote valuable works upon musical æsthetics. The former Kaiser prided himself greatly upon his musical ability, but Mr. Hohenzollern's highest achievement in the tone-world was a "Song of Agir," warlike in the extreme and alive with the very spirit of blood and sword which he attempted to lay at the door of others when defeat came to his own. Germany's greatest modern scientist, Alfred Einstein, he of the inscrutable theories, is a violinist of widely heralded ability. Many have said that if he had not been a great scientist he might have been one of the great fiddlers of the century.

Noble Musicians of England

IN England numerous men of renown have also been exceedingly fine musicians. Among these can be recalled Earl Balfour, whose enthusiasm inspired him to write excellent books upon music, a fine avocation for one of the foremost British statesmen of our times. Sir Pomeroy Burton, American-born journalist and leader of the interests of the late Lord Northcliffe, is an accomplished pianist. Possibly one of the most unusual instances of a great man who also became interested in music and did very great service in that field, is that of Sir George Grove (1820-1900), a noted engineer, an authority upon the Bible, who also gave the world its most famous musical dictionary and encyclopedia of music, "The Grove Dictionary."

In Russia the number of famous musicians who were originally trained for other careers makes an interesting chapter in itself. Alexander Dargomyzhsky was a state officer. Cesar Cui was a lieutenant-general. Alexander Borodin was a surgeon and chemist. Modest Mussorgsky was a soldier. Nikolai Rimsky-Korsakoff was a naval officer. Alexander Tanieiev was director of the imperial chancery. Peter Ilyitch Tschaikowsky was a lawyer. Many of these men abandoned their professions for their larger work in music somewhat early in life. It is not until recent years, however, that Russia has been training its men of talent in music in their youth. Arensky, Rachmaninoff, Skriabin, Medtner, Stravinsky, received their first musical instruction in their youth and soon thereafter determined to become professional musicians.

In America a review of the notables who made a study of music in their spare time, crowded from tumultuously busy lives, would prove a surprise to many of our European friends who cannot think of America in any other terms than dollars. The first musician of note in America was Francis Hopkinson, a signer of the Declaration of Independence, Judge of the Admiralty Court in Pennsylvania, and a member of the memorial Convention of 1787, through which we derived the Constitution of the United States. His songs, dedicated to George Washington, are prefaced by the unassuming statement, "I cannot, I believe, be refused the credit of being the first native of the United States who has produced a musical composition."

Jefferson and Franklin

THOMAS JEFFERSON is reported to have been a devoted lover of the violin, playing the instrument with more than ordinary skill. Benjamin Franklin, while not professedly a musician, took a deep interest in the art and invented an instrument known as the harmonica—a series of bowl-like glasses, graduated in size, mounted upon a rod revolved by a treadle. The bowls were tuned to the degrees of the scale and played by performers who touched the glass surface with their dampened fingers. Beethoven and Mozart both wrote original works for this Yankee invention. Its discontinuance from public use was dramatic. According to all accounts the effect upon the nerves of the players was so destructive that no one could play the instrument for any length of time without physical injury. We are all familiar with the "excruciating" nerve thrill which comes when we draw a knife across a china plate. Possibly some similar effect came from the more mellow, but none the less trying, vibrations of the "harmonica."

White House Music

MUSIC became a significant part of the life in the White House in many administrations, but was given over almost entirely to the ladies of the official household. It was not until the election of Warren G. Harding that we had a President who was proud to boast of his early musical acquirements. It appears that the first money he ever earned was applied to the purchase of a "sliphorn," which enabled him to rise to the heights of the Marion Silver Cornet Band. However crude this musical beginning, President Harding never failed to do everything in his power for music during his administration.

In Congress many men have been proud of their musical accomplishments. With the opening of the Coolidge administration in 1925, we were confronted with the unusual condition of having the presiding officers of the House and of the Senate both highly accomplished musicians. The Hon. Nicholas Longworth has long been a devotee of the art, and General Charles G. Dawes, Vice-President, is not only a gifted violinist but has composed music. His "Melody" is played by Fritz Kreisler.

It seems only yesterday when men in America hesitated to confess their love for music with the fear that they might be thought "effeminate." Now many of our foremost men proclaim the inspirational benefits they have received from the study of music. Music is becoming recognized as one of the great forces in education. Yet in the "Who's Who of 1925" there are at least a dozen public men listed who have given a very significant number of years to music study, who gladly declare their belief that it has helped them in their development, but who are in no way connected with music in their printed biographies in this celebrated collection of American life stories. "Who's Who" should do music the justice of altering these biographies in later editions so that these men may receive recognition for their musical achievements.

Music Appreciation Universal

IT would be stupid indeed to even intimate that material success is related in every instance to an appreciation of music and its development. Countless men have succeeded without music and will continue to succeed. Only recently the writer had a conference with a great American capitalist who had just given some eighty millions for college education. When asked his opinion upon music in education he replied laconically, "Music is all right for girls but the boys ought to work." Evidently he would not call learning a Saint-Saëns Concerto work! Here was a great industrialist unfamiliar with the fact that in the cases of thousands of men, music is giving them one of the worth-while things which incites them to higher and higher efforts. He would doubtless be surprised to learn that the most discussed symphonic composer of present-day America, John Alden Carpenter, is also one of the foremost business men of Chicago.

A list of notable Americans wh fine musicians would amaze the reader. They are to be found and towns all over the country writer's home city of Philadelph cently enumerated some twent citizens who are accomplished Mr. Owen Wister is deeply the musical art. Others on this Mr. John F. Braun, manufac capitalist who, with his accompli Edith Evans Braun, has given recitals as a tenor soloist. Profe Schelling, head of the Departmer lish at the University of Pe (brother of Ernest Schelling) pianist and composer of many pianoforte compositions. Ralph famous engineer and builder of Delaware River suspension bri years in the study of the piano prospect of becoming a virtuo Herbert J. Tily, manager of one delphia's largest department s president of the National Retail Merchant's Association, for yea the organ regularly in church on conducted a department store superior excellence, served as pr the Philadelphia Music League, and conducted huge festivals, posed excellent music for ch chorus. He has the degree of from Villa Nova College. Hoxie, a business man who ha large transactions for years, is n of the excellent Philadelphia Ci Band and Orchestra. Thomas writer upon musical educationa of international note, is now executive heads of a vast mercan prise. Many literary men are al plished musicians. These incl personalities as Robert Hich Luther Long, author of Madame and Louis Parker, noted British

Enormous Expenditures

Musical Predilections

THERE I LIVED for eighteen years. In spite of the natural pressure of tradition I refused to study law, nor did I ever think of becoming a parson. My own wish was to study music; but as one of my elders said: "Clayton, I don't want you to be a fiddler or a dancing master," therefore a compromise was made in favor of architecture which I pursued for three years in the office of Mr. Theophilus P. Chandler in Philadelphia. Then, being of age, I followed my heart's desire, going to Harvard where I studied composition with John K. Paine for two years, and at the same time, the piano with William H. Sherwood. At the end of the two years I moved from Cambridge to Boston where I lived for one year more, continuing to study the piano with Sherwood.

John Knowles Paine, in those days, 1881, was the leading American composer. He was at the head of the music department of Harvard University. His "First," and his "Spring" Symphonies were performed by Theodore Thomas' orchestra, "on tour." His music for a Greek play, "Oedipus Tyrannus" was produced under the auspices of the Classical Department of the University. Mr. Paine was a genial companion, with a keen sense of humor. Having been teacher and pupil, we became good, and I may say, intimate friends.

My First Vogage to Europe

JUNE 28th, 1882, I sailed in the "good ship" Scythia, which, at that time was one of the best Cunarders, having nearly 5,000 tons (the great liners now have more than 50,000). The Scythia had only one deck, on which "we lived and had our being." Everthing happened on that deck. There was no roof over the deck, only an awning, rolled back when it didn't rain; when it did rain, the awning was very leaky. Shuffle board and other sports took place on the one deck, where, also the unwell passengers sat and took their meals. The only resort, excepting a small smoking room, was the saloon, where we were fed, and where we played games and made music. There was an upright piano at one end of the saloon which was in frequent use, whether we liked music or not. Supper, at about ten o'clock, was the order of the evening, when little groups of passengers sat about, chatting, eating "grilled bones" and sardines, and drinking beer and lemonade. The evening meal was a pleasant occasion. Not having crossed the ocean before, everything was new and interesting, flying fish, porpoises diving before the ship's prow, whales spouting and an iceberg (not on speaking terms, fortunately). The trip lasted for ten days.

This simple account of a sea voyage is just to show the difference between "then and now." *Then,* there was a small state room, with two or three bunks. *Now,* you can have a suite of rooms, if you want to pay for it. *Then,* everybody ate the same simple sort of food. *Now,* there is a Ritz restaurant, like New York or Paris, where food may be orderd and paid for accordingly. *Then,* there was a little upright piano at the end of the saloon. *Now,* there is a decorated music room where an orchestra plays. *Then,* there were two or three bath tubs for general use. *Now,* there are any number of private bath rooms, a gymnasium and a swimming pool.

After a happy voyage, we landed in Liverpool at about 10 o'clock, P. M. in broad daylight. As our "daylight saving" had not been invented, the English natural daylight made us feel queer. By the time we reached the Adelphi Hotel the streets were brilliantly lighted. The friends, with whom I was traveling, had engaged a courier in advance. When we arrived at the hotel, the corridors were a blaze of light. Rows of servants standing, "bowing and scraping," unaccustomed to our simple American ways, annoyed and at the same time amused us. We felt sure that the manager of the hotel must have thought he had caught a real American gold fish. The next morning we breakfasted on sole, muffins and Dundee marmalade, all delicious, after the ship's fare.

Leaving Liverpool, we went to Chester, getting our first thrill of antiquity: the Cathedral, the Wall, "King Charles' Tower," the quaint old houses and all the rest of it. My literary traveling companion, being a Wordsworthian, we steeped ourselves in Wordsworth's poetry, meaning to tramp through the Lake Country, and to stop at the various places mentioned by Wordsworth; but as a fact, we drove most of the time, owing to frequent showers which are apt to occur in that region.

Wordsworth's Desk

AT HAWKESHEAD, where Wordsworth studied in his youth, a youngster showed us the desk on which Wordsworth's name was carved, as the boy said: "It *must* have been done by him, because in those days every lad carved his name on his desk." Rain or shine the landscape was lovely and we pursued our way with delight as far as Ullswater, where we spent Sunday, and where I met Mr. Edward Hecht, an English musician, of whom I shall have more to say, at another time. As it is not my purpose to emulate Mark Twain's "Innocents Abroad," let me simply say, that we traveled along the west coast of England, stopping at interesting places as far as the Scotch Lakes and Edinburgh, then down along the east coast, stopping at abbeys, cathedrals and universities, arriving finally in London, where we remained for a fortnight and where I got another thrill from seeing the "Old Masters" in the National Gallery.

The Continent

AFTER CROSSING the channel and going through Belgium, we went up the Rhine to Frankfort, Heidelberg and Nuremberg, the "gateway" to Bayreuth. Having arrived in Bayreuth, we climbed up the hill to the theatre feeling like pilgrims approaching Mecca. "Parsifal" was being performed for the first time. Materna and Winckelmann, were *Kundry* and *Parsifal.* Hans Richter was the conductor. Hans Richter was the greatest of all orchestral leaders, not only for Wagner operas, but for symphonic music. The Richter concerts in London were an annual institution. I often heard them there. I always felt that no matter what was played it sounded right. It was like stroking the fur of a cat the right way Richter, like Joachim, had a very big head and body. They both had many offers to come to America,* but always refused. Joachim feared the sea, and Richter, perhaps, because "he had so many children he didn't know what to do." I once, saw a whole row of his young ones, walking in single file. Some one told me that they were numbered because he couldn't remember all their names.

At Bayreuth

BEFORE the performance began, the trumpet theme was blown from the outside gallery. I am told that the same effect is now-a-days produced at the Bach Festival, in Bethlehem, when a choral is played by trumpets from the church tower. Now let us imagine ourselves in the Bayreuth theatre, where there was an awe-inspiring silence. The sound of the first notes of the Prelude, rising out of the darkness, made an impression never to be forgotten. I have heard it many times since, but never equal to the first performance.

After leaving Bayreuth we went to Munich, passing several days there, getting another taste of beautiful pictures and of good Munich beer. Salzburg being not far from Munich, we spent a day or two there, also seeing a snow mountain. Salzburg is filled with Mozart memories, to which I duly paid tribute. As the salt mines were near Salzburg, it seemed worth while to go to see them. Rigged up in the most unsightly costumes, each of us being given a candle, we entered a hole in the ground. The guide placed us "a'la double runner," on an inclined plane slide of wood, smooth as glass. On the right side of the slide was a rope which we grasped with our right hands, protected by pieces of leather. The guide being the last man, holding back the others, gave a signal, crying: "Let go!" then, "lickety-spit," we went like "greased lightning." The candles, of course, went out promptly: down, down, downer—we were left in complete darkness, until we were held up "stock still" at the bottom of the slide. Having made the first descent, we crossed a gruesome lake, like the infernal regions. Passing through more galleries and by caverns we began to ascend. Having reached the highest point, we were mounted on a real double runner with wheels. The guide cried out: "let go!" and again, for miles, as it seemed, we were shot with lightning speed into daylight. We then had ourselves photographed in our droll costumes.

Having spent the morning in the bowels of the earth, we spent the afternoon going up to the end of the Königsee, that lovely lake! Being Sunday, the peasants were wearing their best Tyrolean costumes, dancing and singing their prettiest songs and making a picturesque foreground, while the lake and snow mountains made a beautiful background.

*Mr. Higginson offered to Richter the conductorship of the Boston Orchestra, but with no success.

"Practice Won't Wait," Said Rubinstein

In her "Musical Memories," Alice M. Diehl tells the following story of Rubinstein as a youth, traveling on a Rhine steamer, where he attracted the attention of a fellow passenger who was a London professor.

"It was the height of summer, and the sunlit river with its beautiful vine-clad mountains was being gazed at from the deck by most of those on board. The cabins were deserted, except for a thin, grim-faced boy with a broad, overhanging brow and close-shut, unchildlike lips, who sat at a table hour after hour alone, practicing finger exercises with stoical patience on one of those folding keyboards—'dumb pianos'—more used abroad for students, than here.

"Something about the pale, peculiar-looking boy touched the professor, who was a German; who himself endured the unsuspected agonies of studentship not so many years back, and was tender-hearted. He could not enjoy his beloved Rhineland while that silent boy was wearily plodding away at his dumb piano alone in the heated cabin. He went backwards and forwards, up and down, until at last he summoned courage to speak to the boy and to ask him to spare himself for an interval—at least to go on deck for a few minutes and glance at the beauties of the river.

"But the boy was proof against persuasion. Shaking his shaggy head, he glanced at his dumb piano with an inscrutable smile.

"'This won't wait,' said Anton Rubinstein quaintly; 'the other will.'"

Do You Listen?

By Elmore Hoppox

A beginner, musically speaking, is like a smooth surface. What is written on that surface should be carefully done.

With the up-to-date teacher there are certain preliminary proceedings for the pupil to get the "tools" (fingers) ready and occasionally to try them out on the keys to see if they are getting easier to manage.

When those ten fingers start parading on the keyboard is the time for the teacher to be on guard. That is the time when the beginner has that tremendously important feeling of "see-me-do-it." That is also the time when he summons his arms to assist his weak fingers and they go merrily along pumping up and down.

The experienced teacher knows it is but a passing episode. Like the measles they all get it. With some it lasts longer than with others; but it must be quietly and persistently watched and corrected.

Strange, is it not, how, as soon as they can find their way around, they love to hammer away with a clang like the village smithy? However, this passes. A most talented pupil had the habit for awhile; then during a lesson, she turned quickly and said, "I don't like to play my pieces so loud any more."

After all, that is the teacher's greatest reward—to direct pupils toward the light and then to watch them going. The first step to develop in the pupil is to listen; and second step is—to listen; and every step thereafter is—to listen. Lessons are not more satisfactory because there is too much playing and too little listening.

A pupil should be taught at the beginning that to listen is of as much importance in the game as to play.

When a pupil—young or old—begins to listen he becomes his own critic, eases his teacher's task and helps to build a solid foundation.

Practical Educational Notes Upon The Etude Music in This Issue

Prepared by Edgar Alden Barrell

[For many years "The Etude" presented monthly valuable educational notes on the music contain each issue. These notes, which were greatly appreciated, were prepared in person by Mr. Preston Ware Music Critic of "The Etude." With the expansion of Mr. Orem's work in many directions it was foun possible for him to continue these notes. They will be prepared in the future by Mr. Barrell, who h cently joined the editorial staff of our publication. Mr. Barrell is an experienced teacher of piano and and an organist as well as a composer. He is a graduate of Harvard University; a pupil of Dr. Arth Guichard and John Hermann Loud. Our readers may look forward to profitable study suggestions a formative biographical and musical comments in this department.]

My Days Have Been So Wondrous Free, by Francis Hopkinson.

Francis Hopkinson, whose dates are 1737-1791, was a prominent American patriot, author, jurist, inventor, patron of the arts, and the first American composer; and his share in molding the political and artistic life of this country in general, and of Pennsylvania in particular, was considerable. To say all this is to say that he was versatile.

If on Wednesday of a certain week, for instance, Hopkinson betook himself to Independence Hall, where he joined others in signing the Declaration of Independence; on Thursday he could be found hard at work at his invention of a new method of quilling the harpsichord; and perhaps on Friday his pen would be scratching along on a satirical poem, which would thrust very keenly, you may be sure, at the object of his invective. Those were the days of versatility!

Francis Hopkinson's song, *My Days Have Been So Wondrous Free,* is said to be the first musical composition of serious worth written in America by an American. (Incidentally, if Hopkinson's days were "wondrous free," then most of us must now be loafers!) It was composed in 1759, but was never published. In writing this song, Hopkinson doubtlessly employed the musical short-hand called "figured bass," for the accompaniment; and the present arrangement has sought—and successfully, we believe—to preserve his original intention. The melody of *My Days Have Been So Wondrous Free* is flowing and pleasant, and redolent of the eighteenth century. Sing it with great expression, taking care that the last two lines are done very slowly and softly.

Gigue, by Galuppi.

According to all present records, Baldassare Galuppi never wrote a *toccata* such as is mentioned in Robert Browning's poem, entitled "A Toccata of Galuppi's." Nevertheless, since Browning is said to have played occasionally a composition of this name on the organ of the convent chapel in Florence, and since his poem bears this heading, it is possible that the *toccata* once existed.

A *toccata* is a "touch" piece. So also is the *Gigue* from Galuppi's *Sonata in D,* which is published in this issue; and the poet may easily have had reference to this. Notice that the eighth-note movement is continuous, except in the very last measure of each of the two sections. Therefore make your rhythm steady and vigorous.

Browning's poem is too long to quote in its entirety, but here are the first two stanzas:

"O Galuppi, Baldassare, this is very sad to find!
I can hardly misconceive you; it would prove me deaf and blind;
But although I take your meaning, 'tis with such a heavy mind.
Here you come with your old music, and here's all the good it brings.
What, they lived once thus at Venice, where the merchants were the kings,
Where St. Mark's is, where the Doges used to wed the sea with rings?"

Valse Triste, by Sibelius.

Most waltzes are tinged, at least, with a feeling of melancholy—and this is true of the *Valse Triste* of Jean Sibelius, the Finnish composer whose symphonies and symphonic poems (especially *Finlandia*) are so often performed by our American orchestras. Observe the tragic gesture of the preludial theme. All the sadness of inevitability lies lurking in this melody.

Then comes the main theme—more light-hearted, and an excellent contrast to what has gone before. And the manner in which Sibelius proceeds to mold his thematic material is unhesitant, felicitous, and truly marvelous.

Three Dances, by Cyril Scott.

Cyril Scott has been called the "English Débussy," and that appellation is not unwarranted. The resemblances and contrasts in the writings of the two composers would make an interesting topic, but the conclusions reached would be likely to be fallacious; for whereas the composer of *Pelléas* is dead, Scott is very much alive, and scarcely in mid-career as yet. Much of his most commanding and enduring work is doubtless still to come.

These waltzes are in the typical Cyril Scott vein. Scott ventures successfully on the sea of modernity, but he is always wise enough to keep clear of the rocks of atonality and stupidity. Melody, which often to-day is looked down upon as being "not quite nice," is not despised by Mr. Scott. And therefore, since melody ever and inevitably determines the life of a musical composition, Cyril Scott's music will probably outlive that of most of his contemporaries.

Ay-Ay-Ay.

This swaying, hauntingly-lovely tune is of Creole origin. In Paris, London and New York it has become "all the rage," and an excellent record of it has been made by Schipa, of the Metropolitan Opera. *Ay-Ay-Ay* must be made extremely rhythmic, and must be performed with the utmost care for pedalling and expression. The piano arrangement published in this month's Etude is remarkably felicitous and playable.

Ay-Ay-Ay is a serenade. Hence to play it with the greatest understanding you must vision a Southern night, and a lover gazing upwards at an iron-grilled *balcon* where stands his fair one, beautiful as the night, silent, amorous.

Love's Perfect Song, by Bernard Hamblen.

Bernard Hamblen's name has become synonymous with successful, worth-while songs; and in *Love's Perfect Song* he seems even to have outdone himself. All the whole art of the singer (and none of the artistry must be peeking out!) will be needed in the interpretation of this song. Its harmonic structure is highly pleasing and its melodic curve most grateful for the voice.

Mr. Hamblen is an Englishman by birth. He resides at present in New York City.

Build up to the climax very carefully.

Honey Chile, by C. C. White.

The composer of *Honey Chile,* Clarence Cameron White, has been pre-eminent in the successful use and adaptation of negro themes and rhythms. He has caught up into his music the full measure of pathos and beauty that linger in Colored song. The present example is among his best work. It should be sung *molto espressivo,* and not too strictly in time.

Just a Little Waltz, by C. W. Cadman.

An ingratiating number by the composer of "At Dawning," "From the land of the Sky-blue Water," and many other songs, operas, operettas, piano pieces, and other compositions. In *Just a Little Waltz* Mr. Cadman is temporarily out of hearing of the tom-tom which has beat so insistently in his ears. This waltz is splendidly rhythmic and graceful, and is equally serviceable for recitals or teaching.

Play this composition rather *rubato,* to have it most effective; and observe very carefully the phrase-marks.

Pastorale, by J. H. Rogers.

The whole *Miniature Suite* from which this *Pastorale* is taken, is highly attractive, and its composer is to be complimented for [illegible] in condensation and choice of material. [illegible] a miniature, in painting, is very tiny [illegible] tensely difficult to execute. Likewise i[illegible]

The melody of this *Pastorale* is limpi[illegible] anced and lovely. Registrate very care[illegible] play the last seven measures slowly [illegible] great expression. For the very last [illegible] all, the Aeoline (Aeolina) may replac[illegible] Celeste.

Torch Dance, by W. Berwald.

This is admirable third-grade teachin[illegible] especially interesting for the shiftin[illegible] melody from one hand to the other. [illegible] tack and well-marked rhythm are neces[illegible]

The Clown, by A. P. Risher.

The Clown will fool you—as clowns [illegible] to do!—for it is not *nearly* as easy a[illegible] Practice the first two measures over [illegible] again, which will make the rest muc[illegible] Strive especially for freedom of arms[illegible]

Gavotte Rustique, by N. L. Wr[illegible]

A graceful, stately dance; a fine [illegible] touch. Do not hurry the *tempo.* The [illegible] *sette* is particularly pleasing.

On Horseback, by W. Renk.

A vigorous, rhythmic number. [illegible] should be very flexible for the stac[illegible] Notice the interlocking sections.

Summer Dawn, by Williams.

This is a good recital piece, and als[illegible] training in arpeggi. It must be careful[illegible]

In Jolly Mood, by R. Krentzlin

Play the runs very smoothly a[illegible] Splendid teaching material.

Andrew Jackson, by Dorothy [illegible]

A fine little march. Mrs. Blake's [illegible] compositions have in the main been [illegible] with teaching piano to children, but s[illegible] written successfully for the voice, vio[illegible] chorus, and for two pianos.

Sunset Musings, by Leo Oehm[illegible]

A study in expression in general, an[illegible] in particular. "Make the melody sing[illegible] one of Mr. Oehmler's most pleasin[illegible] numbers.

In Camp, by M. L. Preston.

In Camp is a military march in 2/[illegible] is very effective. Keep the rhythm [illegible] steady.

Frolicking March, by Voorhies

In the style of a military march. [illegible] hand material.

Fanfare Triumphale, by Armst[illegible]

A fine organ fanfare, employing [illegible] Theatre organists will find this very [illegible]

Holiday, by Gaylord Yost.

An easy melody for embryo violin[illegible] the phrasing carefully.

The Lord Is My Shepherd, by [illegible] Fergus.

This is a musical recitation of th[illegible] Third Psalm. It has been given wit[illegible] success by its talented composer.

Sprague Memorial Hall, Yale University

The Education of the Average Student in Music

By DAVID STANLEY SMITH

Professor of Music at Yale University

vid Stanley Smith, widely known as organist, teacher and composer, born at Toledo, Ohio, July 6, 1877. At Yale he studied music mostly Horatio Parker, receiving his Bachelor's degree in 1903. Later he two years abroad, studying under Thuille and Widor, in Paris. He ne a teacher in the Yale School of Music in 1903; professor, in 1916, and succeeded Horatio Parker as Director in 1920. In 1912 he also succeeded Prof. Parker as conductor of the New Haven Symphony Orchestra and of its Choral Society. He has to his credit a large list of compositions for solo instruments, for voices in solo and combination, and for orchestra.

HE QUESTION is frequently asked of the director of a university school of music: "how geniuses have you among your stu-?" The answer is almost always ." Genius is rare in any country, at me. Furthermore the man of genius arely finds his way to a university. f the temperamental eccentricities of s is the undervaluing of any line of that is not an immediate accessory of ne great gift. The musical genius ot gracefully submit to a course of al study; he is an isolationist. The gifted pianist or violinist is likely derrate the usefulness to himself of s in theoretical music. All he wants practice his instrument. The very genius may do without these other its; but the lesser genius, or the one s not surely a genius, would better his talent with work in fields not liately related to his prime interest. se days the one-sided man has a hard fitting into practical life unless that ide be illuminated to a very high of brilliancy.

ools of music are no worse off than schools in their lack of brilliantly ed students. Literary or scientific is almost as uncommon as artistic . If our universities accepted only ite poets and essayists into the course nglish, only distinguished research rs into the classes in science, they be indeed intimate little communities at men, gifted elbow rubbing with d elbow—and not always in a ly manner, for the elbow of a great s usually sharply pointed and de- by nature to serve as a combative nent like the horns of an ox.

Ordinary Minds Predominate

CE GENIUS GOES unwillingly to ool, our colleges are in fact com- of a majority of ordinary people, with a fringe (or nucleus, as the case may be) of marked men and women. Teachers must learn this, and overcome a tendency to discouragement when they find most of the minds under their care to be of only average rate. I mention these matters, for schools of music in particular are sometimes criticized for not "turning out" graduates who fill the world with fame. Their critics are disposed to pass over without remark the fine influence exerted by many of these graduates who may yet fall short of what is called notable achievement in music.

The profession of music has become so professionalized, and even commercialized, as to compel those within it to expect reward only for work which arouses the thunder of publicity. There is not much amateur music in America. Most music is composed with an eye to a concert performance. Rehearsals always lead to a recital with a ticket-taker at the door. The public regards quartets and orchestras as worse than useless unless they are of the first class, on the same theory as that of the egg that is all bad if it is bad at all.

Many teachers seek to train their charges solely for life within the profession. What is true of individual teachers is true also of schools. The success of a school is measured by the number of celebrities that go forth from it. The higher authorities of universities are only too likely to use this type of measuring rod. What well-known pianist has Mr. So-and-So trained? Has any pupil of Professor What's-his-Name won distinction as a composer? Such questions are likely to frighten our teachers into a feeling of uncertainty concerning the dignity of their own work as musical missionaries and into the bad practice of inculcating within their students a professional spirit which puts success above art, expediency above conscience, and which fosters a low order of ambition that more often than not races on to a tragic disappointment.

What is Professionalism?

PROFESSIONALISM in the teaching of music means ignoring the student of average ability and concentrating on the occasional man who stands far above the average. It means also waste—economically speaking—of the teacher's energy, for, if I am right in my assumption that genius among students of music is rare, almost non-existent, who is there to be taught?

I recognize the delight of teaching a first-rate student; it is a pleasure to watch the development of a fine gift and satisfying to feel that I may have been helpful in guiding it into proper channels. So far as concerns the man at the bottom of the ladder, I do not believe in encouraging the wholly unfit candidate. The teacher's duty is to inform him of his unfitness and so save him from his inferior self—and incidentally save the teacher from the premature whitening or total disappearing of his capillary adornment. This paper is no defense of the low-average man. But I do believe in the usefulness of instructing the good average student of music.

Talent Tells

SHEER TALENT counts for very much in the fine arts. Study for a lifetime is no substitute for lack of a genuine native gift or for an inborn sense of beauty. He whom I call the average student has an adequate endowment of these things, not enough to push him to the top, but enough to make him a power for great good in his community. I have faith in him. If he is at all aggressive he can lift up his voice in favor of true art, he can organize and direct groups of people eager to get from under the weight of a dull existence. Almost everyone longs for proof of a reality that is spiritual, something different from the world we perceive through our senses. This longing explains the rush for the better class of movies (that is as far up as some minds can go); the interest in religion; and, when the inquiring intellect is yet too timid to face the problems of religion, it accounts for the compelling appeal of the fine arts. Spiritual reality moves close to us in beautiful music. There are no intellectual barriers, no questions of creed and theory, to hold it off. The man of moderate attainments in music, provided his capacities be trained to their highest possible point, and provided he have a sensible and wholesome theory of life, may do important work in the world.

The School's Problem

NOW WHAT can our schools of music do for the good average student? And what is the best system of instruction for him?

In endeavoring to answer these questions I shall confine myself to general principles and shall not discuss matters of detail such as methods of teaching harmony, counterpoint, or pianoforte technic.

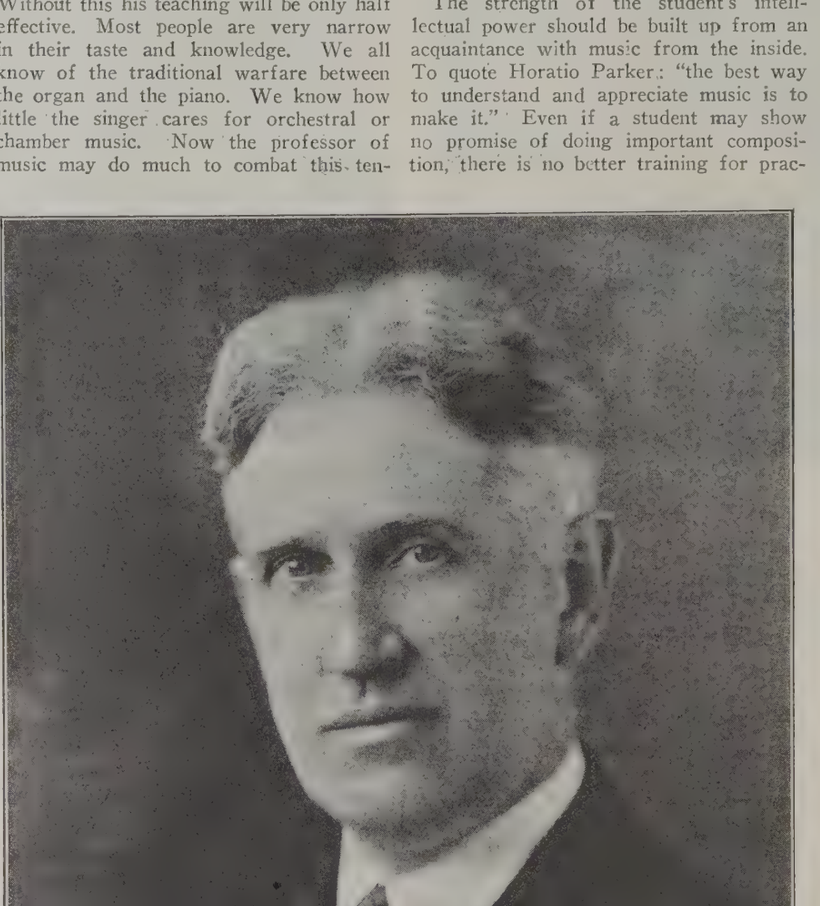
In the first place, I believe that a course of study in music should emphasize the intellectual element in music and do all that is possible to cultivate the student's intellectual capacities. There are several reasons for this. One is that the intellect is much more easily trained than the emotions. The good student usually has a good mind, though he may lack the enthusiasm of a high and noble emotion, the thing that transmutes talent into genius.

Another reason is that the schools

must combat the prevailing popular notion that music is an entertainment, a good time —nothing more. There is much in modern life to give help to this notion—the terrific success of men of no brains but with a pleasing voice or a "knack" for "composition;" the entertaining quality of almost all the music that the phonograph record is making immortal; the vast amount of music served with your meals; and the fear with which even some teachers of music regard music that calls for a little analysis and study.

The University School

A THIRD REASON for stressing the intellectual in our teaching of music applies especially to schools incorporated in universities. Here we musicians are on the defensive. We have constantly to meet the criticism that music is not on a level of dignity with other intellectual pursuits. The statement is not usually made in so bald a form, for university people are a polite lot, but I think we all feel that our beloved art is generally rated much lower than the subjects taught in the schools of science, history or the classics. But this would not be the case if it were generally realized that the study of music offers a wonderful field for intellectual prowess. This is so not only in composition, an excessively difficult subject, but in the department of applied music, in which the intellectual element takes the form of comprehending the music to be performed. Much playing and singing that we hear shows the lack of just this intellectual background.



I have no sympathy with the views of some critics of our system of teaching music, views which have their root in the false aesthetic which I have just mentioned, namely, that music is an entertainment, nothing more. These critics are quite ignorant of the very great part played by the intellect in the producing or reproducing of music. Any suggestion of "midnight oil," "the professorial," or "the academic" fills them with horror. The study of harmony only dries up the springs of inspiration. In a word, away with mental discipline so far as music is concerned.

Masters' Midnight Oil

THE PEOPLE on the inside know better. They know that the works of the greatest masters simply reek with midnight oil, and that many of the greatest masterpieces, such as the *B Minor Mass* of Bach, the *Jupiter Symphony*, the *Ninth Symphony*, the *Messiah*, *Parsifal*, and Franck's *Prelude, Choral and Fugue* are terribly "academic." And the men that wrote these pieces knew well the grind of contrapuntal discipline.

Probably the native inspiration of our American composers is as abounding as that of most of the French composers. But the Americans fall in the rear of the French on the intellectual side, the sheer mastery of the craft. To cure this deficiency our schools should strengthen the course of study that leads to this mastery.

One of the ways in which the schools can bolster up their bulwarks is to lead their students into an intimate acquaintance with the great musical classics of the older and present generations. It is a recognized fact that the American student, whether of music or of any other subject, may master work that is assigned, but shows little spirit of adventure into the domain of the not required. He plays nicely the Beethoven sonata that his instructor picks out for him, but it does not occur to him to read over the sonatas printed just before and after the one he is studying. He listens carefully and appreciatively to the *Prelude* to *Die Meistersinger*, and raves about Wagner, but it never occurs to him to find out what happens after the curtain goes up. It is important that our graduates realize the very great necessity of a background for work they do in music, whether as performers or as teachers. Every musician should have scraped at one time or another a bowing acquaintance with the great literature of music. Without this his teaching will be only half effective. Most people are very narrow in their taste and knowledge. We all know of the traditional warfare between the organ and the piano. We know how little the singer cares for orchestral or chamber music. Now the professor of music may do much to combat this tendency to narrowness. He may bring the pianist into a knowledge of the great organ music of Bach and Franck, he may teach the violinist the wisdom of knowing the pianoforte sonatas of Beethoven, and he may even (but this is indeed difficult) do something toward illuming the long solemn countenance of the organist into a sunrise of smiles by convincing him that *The Mikado* and the *Blue Danube Waltz* are good music even if they do not happen to be fugal or contrapuntal. This is an intensely practical matter. Students should be required to study a vast number of scores of all sorts and to submit to examination in a very broad field of musical literature.

DAVID STANLEY SMITH
Professor of Music, Yale University

The School's Opportunity

OUR SCHOOLS are in a position to do much toward the improvement of the taste and effectiveness of their graduates, and through them of the general community, by insisting on this very study. It is not enough that our teachers and performers know only a few "old-time favorites." They must know also the more recondite compositions of the great masters, which are after all the basis of the whole structure of music. The candidate for the Ph. D. in English is required to know his Shakespeare, his Milton, and others. Why should not the candidate for the Mus. B. know his Bach and his Brahms, his Beethoven, Mozart, and Wagner, and have some acquaintance with William Byrd of the older period and Debussy or Strauss of the recent era?

The strength of the student's intellectual power should be built up from an acquaintance with music from the inside. To quote Horatio Parker: "the best way to understand and appreciate music is to make it." Even if a student may show no promise of doing important composition, there is no better training for practical work as a musician than to go through a course of composition of the fugue, the sonata, and smaller forms, and, under favorable conditions, to do work in orchestral writing. The man or woman of average ability, the person I am writing about, can do this thing with surprising excellence. And as for the player or singer, the superior intelligence with which he attacks his problems may be gained to no small degree from his first-hand knowledge of the mysterious process of composition.

The Modern Music Problem

I HAVE IMPLIED my great respect for the old masters in certain of my remarks. What should be the attitude of the teacher toward modern music and what attitude should he encourage in his pupils? In the first place, it is salutary for a certain type of ultra-conservative student to receive an occasional jolt from a real piece of modern music. A harsh dissonance is good for him. So much mellifluence issues from the horns of our phonographs and from the sweetened mouths of our public singers as to arouse a craving for the sour, lemon taste of present-day dissonance. Whenever romanticism becomes sentimentality, whe pressiveness descends to gush, the d opened to the hard, cruel cry o modernist. This is the strong po the gospel of the Stravinskis. A w point in their practice is the forsaki high, noble emotion for either no tion at all (pure rationalism and ism), or an emotion that is bestia dregs of the composite inner life o great cities.

The student should be taught r fear modern music, but to discrir between a healthy growth of a new of expression on the one hand, a the other hand a caricature of all t held lovely. The conservative mus group all modern composers unde head of decadent and revolutionary heap them all in the waste basket. modernists shock and anger us, but c like Charles Martin Loeffler and A Bax, show us how to carry on in future the fine thought of our Goo ing and beauty-loving musical ancest

The Experimenters

MUCH MODERN music is f experimental. But the public to believe that these experiments a ways successful, and the experir feels injured if he is adversely crit People who live near chemical l tories, however, know better. They hear strange rumblings, and now an they see the laboratory carelessly bl self up, so perilous is its existence a band of raw students inside r they know not what ingredients. I a similar fear when I enter a conce with a program of modern music ah me. What if the unsympathetic vibr of a terrible compound of tones wreck the building?—say six trumpe four trombones sitting hard on as different notes within an octave?

One of the striking forms which ern "lively art" has assumed is Here we have a delightful divers new instrumentation of great clev and attractiveness. The unfortunate about jazz is that its allurements ha many people (thoughtful and thou alike) to herald it as a great Am contribution to musical art, indee only real contribution. Here the beats in time with the pulse of Am life, so we are told. But the falla the argument lies in the incomple of the jazz artist's vision of Ar To him America is Forty-second glittering expensive hotels, cabarets, ical comedies, fine clothes, taxis, bar and all the show and pomp of mone money getting. All this finds its ful portraiture in jazz. But the artist is rarely found roaming amo hills of Vermont; he is not often disc absorbed in a view of golden stretching for miles over a prairie. quiet, idealistic, religious America America of good books, of great pi —this America is a blank to him, the most an unspeakable bore.

The Jazz Problem

JAZZ SHOULD BE admitted int schools and colleges for what worth, for there are times when more appropriate than a Bach Furthermore, one should not quarrel the humor that is in it. But its c delightful and fresh at first, soon b to injure. Its monotonous rhythm, a varied as the chug-chug of a steam en enslaves its practitioners within a for and induces in composer, performer listener a stupor of mind and emoti

Romanticism in Music

By HERBERT WESTERBY

A Distinguished English Author Discusses the Emotional Sense of True Beauty in Music

IE ELEMENT of the Romantic is one that has always been difficult of definition. It is a term is applied principally to literature nusic. The Oxford Dictionary a romance as "A tale in verse ing the adventures of some hero alry," or, in prose, a narrative in "the scene and incidents are very from ordinary life." On the other he word *Classic* which is usually to the word *Romantic* is variously as "A work of the first rank." stipulates in addition for the qual- "Taste and Restraint."

Fillmore comes nearer the point ie says, in relation to music, "In music beauty of form is first and al content subordinate. In roman- sic emotional content is first and ubordinate."

son says, with regard to poetry, ot metres, but thought so passionate 're . . . that it has an architec- its own;" by which we understand is not form but spirit alone which ounts in poetry. It has been said manticism is another name for the of Poetry," and that all good com- have been romanticists.

Romanticists

S seems to imply that classic com- sers, as distinguished from the ro- school, are not good, or not so good itter, which again would seem to be ctory, for the term classical cer- ntimates the *standard* work, one nas survived the criticism of the rough possessing intrinsic excel- f its own.

irsue the matter further, Pater has it the spirit of Romanticism goes the desire of mere beauty, and adds or wonder, the element of the new irre. If this be true, then the Ro- m of one generation may fail to ie next; and it is admitted that e call beauty is, after all, a matter

g the endless confusion in the defi- f Romanticism, will it not be bet- xamine the foundations of the mat- get rid of these shifting sands of nty?

problem is, succinctly stated, a of Style. Now we can distinguish on a mental plane only by their o call forth various emotions.

roblem of Romanticism as distin- from Classicism is a psychological the distinction applies to literature sic, both of which, in themselves, esses of thought or the result of

On paper one is expressed in and the other in various shaped Both use the medium of sound, ough the irregular vibrations of the other through the regular vi- of tone. The thoughts repre- the vital point—are, however, not ntelligible, but a jumble of words ble of notes signifies nothing. In es they must be organized.

Process of Composition

RGANIZATION of either words ones we understand the process of ion. Composition is necessary to ility.

ry Composition has been defined as of choosing and arranging words v sense." This definition of litera- lies equally well to music. The uisite in music is that it make But that is not all. There is an ecessary element; this we call *style*. Sense and style are the criteria in all musical and literary art.

The methods of employing these elements of sense and style (matter and manner) in musical art vary considerably according as the appeal is directed mainly to the intellect or the emotions and as the work is intended for the young or old, for the dullard or man of intellect.

Taking the matter, however, by itself, we would say that it must:

1. Make sense; that is, appeal to the intellect.
2. Develop its ideas sentence by sentence.
3. Give an idea of definite form, of unity.
   A. Key relationship must prevail.
   B. The component parts of the composition as a whole must be related.

Presuming that these conditions are satisfactorily dealt with, we may pass by the matter, or materials, of the structure.

Intellectual Appeal

SO FAR, be it noted, the appeal is to the intellect, that is, there must be a message for the average mind. Just beyond this the question of style steps in. Barely stated, style in music may be defined as the manner of presentation and may be classified as declamatory, introspective, expressive, sympathetic, religious, tragic, humorous, meditative and dramatic. This list, though not all-inclusive, gives some of the ingredients of style in composition, assisted in its interpretation by light and shade, emphasis, and relaxation, boldness and coyness, serenity and restlessness, and other qualities, all of which reflect personality or individuality of style. The tragic nobility of Beethoven, the brooding sentimentality of Tschaikowsky and the langorous tracery of Chopin, all are instances of this.

Emotions of Poetry and Music

IN BOTH poetry and music the emotions are or should be aroused, and the success with which this is accomplished is the measure of their beauty of style; and really it is this feature of beauty of style, in its power to arouse the emotions, which is the determining factor in both classic and romantic music. Without it no classic is worthy of the name, nor would it live long enough to be rightly so-called. In enjoying a classic the beauty of style comes first, and the microscope afterwards. "A thing of beauty is a joy forever" whether it be classic or romantic; and, that being so, are not these terms parti-colored statements of the same thing?

We have now considered the deciding factor in both classic and romantic art to be beauty of style and not beauty of form, yet the terms are to some extent synonymous. Romanticism has been defined as the spirit of poetry or the divine afflatus, and perhaps it would help if we consider what the spirit of poetry really is. Usually we characterize it, apart from subordinate rhyme and rhythm (matters of form), as the presence of thoughts beautifully expressed and the absence of the merely prosaic, the merely intellectual.

"In poetry" says Mr. Aldis, "of whatever kind, the poet must keep always in touch with beauty. He may be quiet and tender, fantastic and wild, or earnest and impassioned so long as it is in praise of the sense of beauty which has inspired him;" and, as music has been termed the "poetry of sound," we look also for that same beauty of inspiration in music which we find in poetry. Music, as the chief of the arts, belongs to the realm of emotion. It displays the innermost feelings of the composer and, without the power to arouse the hearer, it is valueless; like poetry it belongs to the inner life.

Two Types of Beauty

THERE are, however, two types of emotional beauty; the characteristic and the ideal.

Characteristic beauty is denoted by an intrinsic attribute. Just as every instrument has a character of its own, so every musical composition has a psychological bearing, though perhaps an unconscious one. Its title and form afford a descriptive clue, but to possess characteristic beauty it must "ring true," be in accordance with life. Hence in all these forms of characteristic or descriptive music, such as works entitled "Dawn," "The Fountain," "Pastoral Scenes," "Berceuse," "Barcarolles," "Hunting Scenes," we expect something not easily described but quickly recognized when the master-hand has produced it. The peculiar charm of the work has made a successful appeal to the emotions.

Ideal or symbolic beauty appeals to a sense higher than that of form or descriptive characterization; it is symbolic of deeper feelings, of something beyond in the regions of the sublime; and the commonest of forms can be idealized by the divine breath of inspiration.

These two types of beauty are, however, not stationary. It is true that "Art is long and time is fleeting," but art is also progressive. It has been said by the philosopher, Schelling, that there is a moment of highest development in nature after which comes a decline. So in art, there is gradual progress to a climax in some manifestation, be it formal, characteristic or ideal. Musical art may begin with a warble and end in a choral symphony. In accordance with man's limited but progressive powers, the conception of beauty must likewise broaden and ascend. What may arouse ecstasy in primitive man, may be regarded indifferently by the twentieth century.

Thus, we come to the inevitable conclusion that there is only one standard of beauty, a progressive one, and that standard is both romantic and classic, romantic in the present because it is new and daring, the latest manifestation of beauty, and classic in the past when its beauty has become almost a commonplace, and yet has proved the evolution of the fittest.

An Hypothesis

MR. CECIL GRAY in his powerful "Survey of Contemporary Music" presents the hypothesis, "Romanticism is the specifically musical element in art." This almost implies that romanticism is summed up in music, a standpoint obviously incorrect and indeed negatived by the same author's statement that, "All romantic art continually aspires towards the condition of music."

That being so, it is surely confusing to pr[illegible] one art in terms of another; it is an [illegible] that will not work out. To speak [illegible]e specifically sculptural art in music lea[illegible] to loose thinking. The fact is that—

1. The characteristic of good music, its power of exalting and intensifying the emotions, can belong also to the other arts.

2. The arts are complementary, one to the other, not competitive. Each makes its appeal in its own way through the various senses.

3. Romanticism is the manifestation of emotional development common to all the arts, and is therefore ever progressive.

The romanticism of to-day is not the same as that of two hundred years ago. The romanticism of Bach is not that of Schönberg and Bela Bartok, and two hundred years hence, what is left of the romanticism of to-day, will surely, by survival of the fittest, yield the classic of that age. "All romantic art is a swan song," and "The art history of every civilization, viewed collectively, is the progress from classic to romantic value." It follows that the true interpretation of romanticism is a comparative one, and one ever progressive.

A Distinguishing Feature

THE distinguishing feature of romanticism is its emotional stress, and, since music is undoubtedly the best interpreter of the emotions, "the romantic movement attains its fuller expression," in music. But it is as incorrect to infer that romanticism is "summed up" in music, as to avow that all the arts are likewise represented in the "divine art." No, the spirit of romanticism springs from the human breast; it is not "specifically musical," but intrinsically human.

Also, it is surely claiming too much for music to say that literature and painting express the values of the music of the period. On the contrary it is better to point out that the arts of any period express the reaction of human emotions as aroused by unusual experiences, as, for instance, the devastating effect of a great war.

Sir Philip Burne-Jones has been recently declaiming on the vicious enthroning of ugliness in art, "perpetrated either by those who sought by sheer eccentricity to attract that attention which was rightly denied to technical incompetence or by men who, in obedience to ephemeral vogue, were not ashamed deliberately to abuse a genuine talent." From the time of Strauss to the present day the same wave characterized by excruciating and meaningless discords, has been passing over and has almost submerged musical art.

No doubt the movement is to some extent a revolt against old-fashioned and out-of-date rules; but only students are bound by these and the discipline is beneficial. The less we hear of mere technical trickery and the more of true beauty, the better is the average hearer pleased. It cannot be denied that he is the greater artist who can fling aside his chains and soar on the wings of inspiration.

We are now back to the foundation and are entitled to conclude that:

1. Romanticism is the latent and ever progressive manifestation of the emotional sense of true beauty.

2. The Romanticism of the present ultimately becomes the Classicism of the past. The two styles can, however, exist at one period according to the model selected; thus Mendelssohn has been fitly termed, and no doubt was, the "backwash of classicism," in an age of romanticism, when new ideals were taking shape in the minds of Schumann, Chopin, Liszt and others. He chose the older models: his was the conservative mind that looks out over the past.

To-day in our own country there are composers who, like Lot's wife, still look backwards, but men do not progress by looking backwards. Neither should the "new wine" of Romanticism be poured into "old bottles" to result in cubism or a blatant succession of fifths. Then, instead of poetry we behold "broken pottery."

Practicing Versus Playing

By Reginald W. Martin

THE average piano student would not think of approaching an academic study in the same desultory and inconsequential manner he does his piano practice.

Practicing is not playing one piece after another (with an occasional popular "jazz" piece thrown in), or even in the repetition a given number of times of a piece, a study or exercise. The study hour at the piano must be approached with a purpose entirely removed from that of trying to strike so many keys, or play so many pages.

Primarily, practicing means training the mind. The mechanical phase is quite secondary.

One may obtain good results by reading the music away from the instrument, learning the notes, the fingering, the expression and so forth. This requires *concentration.*

Here are a few good rules:

Never play a wrong note; play slowly enough that you do not make mistakes.

Never use the wrong fingering; if you use the wrong fingering twice you have formed a habit which you will have to break, hence your time is worse than wasted.

Think of what you are doing; do not play first and think afterwards. You would not dream of trying to learn trigonometry by seeing how fast you could read through the text-book.

Do not play a piece at all until you know it. Practice it. Take each measure or phrase and practice it slowly and patiently until it is fixed in your mind. You will thus save yourself much time and considerable distress.

The Student "Takes Stock"

By W. A. Smith

ACCOMPLISHING a work is overcoming the resistance it involves. And where is the greater part of this resistance? Is it in the piano? Is it in the clumsy fingers? Is it in the notation of the printed page? Perhaps partly so. But is not the greater part of the struggle in the overcoming of the inertia in one's self?

Music is not a thing to amuse its students. It is a fine art. As such its devotees must become its willing servants. Self must be overcome and the best of our efforts laid on the altar of music.

To do this it is well that one "takes stock;" and for this purpose the following questionnaire is proposed:

Do I love my ways better than the ways of music?

Am I ready to meet and overcome myself?

Can I do unpleasant tasks pleasantly? Just pleasantly, no scowling?

Can I take strong criticism graciously?

Do I know the meaning of constancy?

Can and will I listen to the instructor of my choosing instead of to what other people say?

Am I willing to set aside my likes and dislikes, my feelings and excuses, that I may learn the real spirit of music?

Do I know how to appreciate a faithful instructor when he does not do my way?

Do I need a strong, energetic teacher to direct my efforts, to lead my ways of thinking, to guide my practice; or am I satisfied to amuse myself with an art many times larger than I?

"Before all things this is an age of experiment, of preoccupation with technical resources; and synthetic products of the laboratory are as common in music as they are in commerce."

—H. SYDNEY M. LEWIS.

Musicians and Their Hair

By Emil A. Bertl

MUSICAL sounds, and how they affect the growth of hair may seem an incredible subject.

But M. Henri de Parville, the French physicist, has advanced the following theory, after research and general statistical surveys.

He claims that eleven per cent. of all musicians are bald, through the result of undue exposure to the wrong musical vibrations.

His theory is that the well-known action of music on the nervous system affects the nutrition of the bodily tissues and thus has an influence on the hair, and he claims that observations support this view.

The influence, however, is not always the same.

All male pianists have a wealth of hair, and it is found that playing the piano and violin have an especially beneficial effect, as do also, in a lesser degree, the violoncello, the harp and the double bass.

Players of the flute and clarinet get much less hirsute stimulation, their locks showing a very perceptible thinning by the age of fifty.

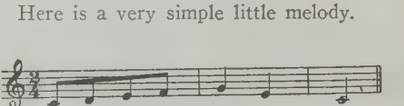
The harm done is among players of brass instruments, and those who make much use of the cornet and the horn advance rapidly toward baldness; players of the trombone lose at least sixty per cent. of their hair in about five years.

Oboe players, through intense exertion in the blowing through a small reed, are also amongst those who become bald.

This, of course, should not be taken too seriously when contemplating the study of the various instruments; as climate, as well as the conditions of water used upon the head, combined with the effects of the various soaps and shampoo oils, have an equal effect upon the individual's hirsute appearance.

The Game of Listening

By Leonora Sill Ashton



DO YOU know that there are lessons for the ear, as well as for the eye, which must be taught to read, and for the hands which must be taught to write, and play upon musical instruments?

These lessons are to teach the ear to *listen.*

Now one can hear you laughing and saying that is one thing you do not need, that you can listen without being taught.

Well, let us see.

Here is a very simple little melody.

Of course, by just looking at it you can read the notes well enough for your hands to play them at once.

But suppose you had never seen the notes and somebody else played them, could you tell me what kind of notes they are, in what time the little piece is written, how far apart the notes are, and whether they go up or down?

When you can do this, then you will have learned to listen; but in the meanwhile, suppose we make a game of this and play it just as we play anagrams to learn how to spell, and authors to teach us the names of writers and their books.

When there are a number of you children together, choose a leader and have that one sit down to the piano. The others must sit with their backs to it, so they cannot possibly see what the leader is doing.

Then strike one note. Strike it again an octave higher; then an octave lower; and see who can tell what the difference in pitch should be named.

After this strike two notes together and see who can tell how many are sounding. Then strike C, follow it with E, and see if they can tell how far apart they are.

The more you learn of music, the more interesting this game will become. I would suggest that you take your lesson each week, make a game of it with your friends, and all see if you can *hear* the musical sounds that are played, as well as you can *see* the signs which stand for them on the printed page.

Professional Etiquette

By W. E. Fink

THAT music has reached high recognition in the professional world is evidenced by the fact that it now is on the curricula of many of our large universities and that its theory and practice is taught even in the grammar and high schools throughout the country. To maintain this standard will require a careful study of common practices and the observance of clean professional ethics, by those within the teaching pale.

In the profession of medicine the doctor refuses to accept the patient who has been under the treatment of another physician, till the first has had an honorable discharge, except as it be for consultation. But how about the music teaching profession? In general, the student changing teachers is not only warmly welcomed but also is regaled with the idea that all his former instruction has been along lines quite unsuited to his needs.

As an example of the ethics in practice, a young man had been studying with a prominent teacher for ten years, till he became a fine exponent of his methods. After maintaining for some time a studio of his own, he sent one of his best pupils to his former teacher, for advanced work. This pupil met with nothing but lively condemnation of his former instruction, till he mentioned the name of his former teacher. The older man had thrown his boomerang and was left helpless—of course, as he deserved, losing a desirable pupil, as well as others who would have followed.

With the more enlightened conditions developing from the wider-spread musical culture of our days, the far-sighted teacher will drop all practices calculated to deter the advancement of fellow-professionals and will devote his time to fortifying his artistic and business methods by uprightness and high ideals in all his dealings with both pupils and the public.

One Key at a Tim

By Charles Knetzger

SOME pupils, after several ye sons (I do not say music stu still unable to tell key signatur The fault may be due to an uns arrangement of instruction boo take up the keys in an irregul one key here and another on the remotely related, a jumble of sharps.

Self-Help in Music Study—What It Is—What It Does

By RICHARD KOUNTZ

Mr. Kountz is a well-known musician and critic of Pittsburgh, Pennsylvania. His "Sleepy Hollow Tune" and other compositions have been exceptionally successful. His article upon "Self-Help in Music Study" is both inspiring and practical. It will help both the student and the amateur.

seven and eight are exactly alike; more good news. Furthermore the whole of the left hand part of measures five and seven as well as of six and eight are exactly the same; still more good news.

Seated at the piano, I lay my left hand upon the chord that occupies the second count of measure five, A-flat, D-flat and F; thumb on F, second finger on D-flat and fifth finger on A-flat; feels comfortable. I try the third finger on the middle note; feels still more comfortable. I now glance back at the first count of the measure occupied by D-flat. Obviously the fifth finger will go there.

Saving Motion

I TRY out the first three counts of the measure and then I note that I can save myself considerable motion by spreading the fingering a bit, that is, by using the fifth finger on the first D-flat and, reading upward, the fourth, second and first fingers on the chord. I try it over a few times; very good. I move on to the next measure and find only one new feature, the first note; fifth finger again and the same fingers for the chord. I play these two measures over, one after the other, some fifteen or twenty times as a continuous exercise.

Relaxing a bit, by changing the mental focus, I glance over the left hand part of the first twenty measures and find that I have already learned the left hand part of measures five, six, seven, eight, thirteen, fourteen, fifteen and sixteen, or a full half of the left hand part of the first twenty measures; more good news. I continue in the same style with measures nine, ten, eleven and twelve which, with some very little changes, are the same as measures seventeen, eighteen, nineteen and twenty. Within ten minutes of actual practice I have learned the left hand part of my alloted twenty measures; fair progress!

The Right Hand

I NOW turn my attention to the right hand part and find, playing through the first four measures very slowly, that they lie very comfortably under the hand without a single change of position. I continue on to the end of measure seven where I come upon a steep ascent straight up the staff. Obviously it is the D-flat major scale. I go back to the beginning of measure seven and play it and measure eight over a few times, still slowly, to get the "feel" of this change of figure. Having gotten this to my temporary satisfaction, I continue on through the next two measures.

Measure ten, offers (with its mordanted E-flat) the first real nut to crack. No less than twenty-five playings (at first very slowly) of this measure with its tricky fingering will satisfy. The same applies to similar measures twelve, eighteen and twenty. Wearying a little of this right hand business by this time, I refresh myself by going through the left hand part from measure four to measure twenty-one; then back to the right hand part, beginning with the tricky measure number ten, then the other tricky measures, twelve, eighteen and twenty; then back to the beginning and through the whole right hand part.

A farewell glance through the left hand part and then *very slowly* both hands together from the beginning; two or three more times through, still very slowly, and I am ready to step out with it a bit. In less than a half hour's practice I have the first twenty measures of a musical masterpiece pretty well in hand. That is self-help in practical application, evidently nothing more or less than slow, painstaking accuracy.

Economy and Study

NOW, for a glance at the economic side, let us suppose that a pupil, instead of taking this Chopin waltz thus accurately learned to his teacher, takes it to him in such shape as to require fifteen minutes for corrections. If he is paying the teacher at the rate of three dollars for a half-hour lesson, the pupil has thrown away one dollar and a half cold cash; or, should the teacher's rate be higher or lower, a proportionate amount. Nor does this take into consideration: (1) the loss of time which the pupil wasted while supposedly practicing; (2) the loss of the time which the pupil will have to devote to practicing the same piece before the next lesson; (3) progress lost during the wasted time; (4) the loss of advance knowledge which the teacher would have imparted to him during that part of the lesson that had to be used for correcting mistakes; (5) the loss to the pupil of that very valuable feeling of confidence that an accurate learning would have instilled and which would have acted as a kind of inspiration for future work; and (6) the lamentable loss of interest on the part of the teacher toward the slip-shod work of the pupil. Of these, the last is probably the most costly.

Specific Advantages

WE MAY now pass on to a more general phase of self-help which may be covered briefly by the statement that every advantage offered by anything with which one comes in contact and, specifically, musical literature, the concert hall, musical studios, art galleries, movies, theatres, radio and the phonograph should be seized upon and studied with the same slow accuracy. In this way, and in this way only, is progress made. When all is said and done, the teacher can only *guide*. The pupil himself must search, discover and apply the fruits of his own industry to his work.

Continuing this consideration of the general phase of self-help, it may be well, at this point, to lay down the maxim that well over ninety-five per cent. of what we learn is learned by imitation. The amount of absolutely new knowledge brought to light by even the outstanding intellects of the world is comparatively negligible. The overwhelming majority of their efforts are devoted to reorganizing such knowledge as is already well known. Its apparent newness in the form in which it comes from them is due only to the *novelty of its application* or to the peculiar forms in which the knowledge has been organized.

The fundamental need is for them to acquire as much knowledge as possible and, later, to experiment unceasingly and untiringly in finding for it a new application of it or a new form in which its component parts may be organized. Thus it is evident that the need of the music student is for constant and careful study with the object of acquiring a foundation of both general and technical knowledge and later of reorganizing it to meet the demands of his individual needs or to mold into concrete form the abstract images created in his imagination.

Dissipating Popular Superstitions

IT WILL probably be just as well here to dissipate two popular superstitions. The first of these is the belief that a man who is an outstanding figure in his own line of work is generally a booby in prac-

A NEW DEPARTMENT OF PUBLIC SCHOOL MUSIC

To be Conducted Monthly by

GEORGE L. LINDSAY, Superintendent of Music, Philadelphia Public Schools

Opportunities for Teaching Music in the Public Schools

By George L. Lindsay

THERE IS NO field of public service that is more interesting and satisfying than that offered by the teaching of music in the public schools. The professionally trained musician oftentimes proves to be the most resourceful type of teacher, and his services are in great demand. The professional musician with suitable academic qualifications will find in this field a real opportunity to develop in the coming generation a love for vocal and instrumental music not alone through the medium of that wonderful instrument—the human voice—but in addition through the medium of class lessons in the study of various instruments. A definite time has been set aside also for lessons in music appreciation, in order to develop a love for music as an art given to man for pure enjoyment.

It is our purpose to tell how to qualify for public school music positions and also to point out the fact that there is a real opportunity in this field for those who wish to enter this great profession. Public school music has long been recognized as one of the important subjects in the regular public school program. The modern educator recognizes the fact that the teaching of music requires the services of a capable music teacher and also that the average grade teacher is already carrying a big enough assignment when she teaches all of the so called "three Rs" in elementary education.

The Platoon School

MANY progressive communities have introduced the platoon school idea. The platoon school is the type of elementary school in which certain special subjects such as music, physical training, shop, domestic arts and other special subjects are taught by special teachers in rooms adequately equipped for the particular subjects presented. The wide-spread adoption of the platoon school idea has created a demand for teachers of music who are professionally trained for this work. While it is quite possible and practical to use the services of regular elementary teachers who can qualify to teach music in the earlier grades, there comes a time, however, that is, in the fourth and later years of school, when the progress of the children demands the use of specialists who are capable of leading the pupils into broader fields of musical experience.

Qualifications Wanted

THE EDUCATOR is looking for the music teacher who can sing and sight-read acceptably and play the piano capably whenever called upon to do so, either as a soloist or an accompanist. One must love to sing to become a singer. It is not the breadth of tone but the breadth of vision and imagination which makes the pleasing singer. Vocal study and the study of public speaking or expression brings out personality and this surely is the key-note of success. The development of capable piano playing calls for intensive application and thoughtful practice for many years. Those who have superior ability on the piano or organ, have a great advantage over those who are only mediocre performers; as the former have an asset technically which admits them to the higher circles of artistic and cultural life. Even though one cannot express deep and beautiful thoughts verbally, he can command attention because of instrumental skill.

The ideal public school music teacher should have a cultural background. He should have an inherent love for the beautiful in all things and also possess factual and artistic knowledge in order to see clearly with broad vision. One's social instincts should be well developed. Active participation in music and civic clubs affords opportunities for individuals to grow in self-expression. It has been said that the greatest study of man is man. Might we not add that the greatest study of man is that of investigating and discovering the hidden capabilities of one's own self. Confidence in one's ability is developed by participation in dramatics, chorus and solo singing; and there is nothing more helpful than the practice of leading community singing for breaking up a bad "inferiority complex." The artistic musician will find by "taking stock" that he already has most of these qualifications. He should seek opportunities to round-out his general cultural equipment.

Preparation

THERE IS no sharp line of difference in the preparation of the public school music teacher and the professional "general practitioner" in music, that is, the musician who can play and teach piano, and also direct orchestras and choruses, and sing and teach voice. The public school music teacher should have adequate training in school music methods. There are normal courses in methods given by various state approved institutions and minimum standards of required preparation have been established for supervisors of music in elementary schools, junior high schools, senior high schools and for teachers of instrumental classes in elementary and higher schools.

The preparation of the supervisor is concerned largely with methods in all fields of school music teaching, whereas the preparation of the school music teacher is more specialized, in that the school music teacher must present intensive music courses and handle pupils directly. The supervisor follows up the music work of the regular grade teachers who teach music in the daily school program, supervises the work of the special music teachers and is responsible for planning and carrying out a broad scheme of music education fitted to the needs of a giv
munity. The music teacher

GEORGE LeROY LINDSAY

George LeRoy Lindsay was born in Ashbourne, Montgomery County, Pennsylvania, January 23, 1888, and received most of his education in Philadelphia. He holds the degree of Bachelor of Music and Bachelor of Arts, and has been an instructor in public school music methods at the American Institute of Normal Methods in Chicago and Boston, and also at Temple University, Philadelphia.

In 1918 Mr. Lindsay was elected an assistant to the Director of Music of the Philadelphia Public Schools. He organized and trained the remarkable chorus of 500 children who sang the difficult four-part music of "The Children's Crusade," by Pierne, in conjunction with the Philadelphia Orchestra and the Philadelphia Choral Society. Under the direct supervision of Mr. Lindsay, the development of music in the senior and junior high schools has placed Philadelphia in the front ranks of the large cities offering worth-while opportunities in all kinds of music study.

In June, 1925, Mr. Lindsay was elected Director of Music of the Philadelphia Public Schools. In September, 1925, the course of study in music in the elementary schools was revised and on February 1 a new standard course in school music was placed in operation.

Mr. Lindsay is a pianist, organist and composer of standing. Under his personal musical direction, one of the leading Philadelphia churches gained the distinction of having the largest regular attendance in the world, at a mid-week service.

ra Stems. The Una Corda Pedal

Please explain why the first note e following progression has the extra and flags extending upward, when it eady a sixteenth note and connected the group.

What do *una corda* and *tre corde* ?, Do they signify which pedal to

E. T.

Such extra stems are occasionally l to show that the notes which ess have especial significance. Gen- such notes form in themselves an nt melodic progression. Often marks or accents are also added. r less stress should be given these ccording to their value in relation general structure.

Una corda means to depress, and *le* to release the soft pedal. When dal is pressed down in the grand he entire action moves slightly to ht, so that each hammer strikes cally on one string (*una corda*), of the customary three strings (*tre* Actually, when the soft pedal the hammer hits two strings, not one.

Extemporization

In reply to my request for data on this subject, I have received the following interesting letter from Mrs. Ann Heuermann Hamilton, Field Worker in the Junior Department of the Missouri Federation of Music Clubs. She says:

"As I have always been interested in this department of music study, I cannot refrain from accepting your invitation to tell you how I go about teaching it.

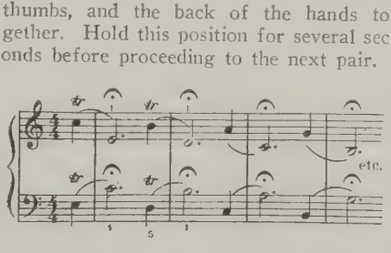
"My preliminary studies in keyboard harmony and transposition begin at the very beginning: half-steps, whole-steps, tetrachords, scales, tonic chords in five-finger position, 1-V-1, 1-1V-1, 1-1V-V7-1, 1-1V-1, 6/4-V7-1, in five and six-finger position. All these things are done in all keys and the fingers almost unconsciously learn to follow certain "tracks" very much in the manner that a "natural" player's fingers act. So far there has been no opportunity for originality; but now come illustrations that show how the chords are used in actual composition. The first illustration uses only the tonic chord, in period form. As soon as this has been played in every key, the pupil makes up a similar period. The next illustration uses 1-V-1; the next 1-1V-1, and so forth, and after each illustration the pupil extemporizes one with those particular chords.

"While this has been going on, work in composition for beginners—which also begins unbelievably easy—has been progressing. Keyboard harmony furnishes the finger ability to do the work, and composition teaches the musical form. They go hand in hand. When the preliminary studies are completed, the various positions of the chords are used, and the illustrations by Beethoven and other masters inspire the students to some really good work; for still, after every illustration comes original work at the keyboard modeled after said illustration.

"Some teachers may consider the above work too cut and dried; but I do not consider it so. It lays a definite foundation and avoids the aimless rambling with which the usual extemporizer is addicted. This foundation will no more interfere with the flow of genius than learning the alphabet or the multiplication table will. It is obvious that with such a foundation the embryo musician can advance as far as his talent and application will urge."

Mrs. Hamilton also encloses a copy of the Federation booklet which outlines the contests for juniors and prescribes lists of materials for work on various instruments and in general musicianship. The latter field includes tests for the ear, in harmony, invention, sight-reading and transposition. She adds, "We hope to be able to add Extemporization before long."

Hand Position



Can you tell me how to make a pupil hold the outside of his hands up? I tell the pupils to curve the hand as though they were holding a ball, and tip the hand towards the thumb, instead of letting it slide down hill.

About one in twenty is serious-minded enough to do this, but the others disregard what I say. Perhaps you can think of some device whereby the hand can be kept in good condition without their seeming to realize it.

S. M. LEG.

If one lays the hands carelessly in the lap, the natural position is with the little finger down and the thumb above it. Hence to secure a properly balanced position on the keyboard, one must hold the hand rotated about half way over toward the thumb.

As a means toward this end, let the pupil practice the following exercise each day. In playing the first note of each pair, let the hands rotate outward, the right hand to the right and the left hand to the left, until the thumbs are in the air, directly over the little fingers. With the second note of each pair, however, both hands should rotate decidedly inward, till they *stand on the thumbs,* as it were, with the fifth fingers now in the air above the thumbs, and the back of the hands together. Hold this position for several seconds before proceeding to the next pair.

Of course, the proper position for general use is about half-way between these two extremes. Note that it will help to attain this position if the pupil be taught to keep her wrists somewhat above the level of the hand.

MacDowell's Shadow Dance, Op. 39, No. 8

Will you please give me some suggestions as to how MacDowell's *Shadow Dance* should be rendered? Should the pedal be held down during the low notes in the bass that must be sustained?

MRS. M. P. O.

Measures 25-44, in which the sustained bass notes occur, should be played very delicately, with the soft pedal held down continuously. This extreme lightness will permit a freer use of the damper pedal than would otherwise be the case. Hence, depress the damper pedal in measure 25, and afterward quickly raise and lower it whenever the bass note is repeated or changed, namely, in measures 27, 28, 32, 36, 38, 41, and each following measure, as far as measure 45.

I measure my words when I say that not the most profitable transaction of my business career has brought me results comparable in value to those which I derived from the investment of hearing, in my early youth, let us say, "Tristan and Isolde," or seeing Botticelli's "Primavera."

—OTTO KAHN.

The Pupil's Interest

After the rudiments of the piano have been taught, and scales, duets, expression markings and prominent composers made familiar to the pupil I find the lessons often become quite monotonous, especially to the older pupil. Can you suggest some means of keeping up the student's interest? I have also tried sight-reading, but find that this does not appeal to all students, particularly those who are not adept in the subject.

E. A. H.

To be effective, music study must be backed up by enthusiasm, and one of the most important functions of the teacher is to devise means for arousing and retaining such an attitude.

Of many devices for this purpose, I mention two—the one general and the other specific. The first consists in pupils' recitals, group meetings, or any other kind of team work that will induce a wholesome emulation and interchange of ideas.

The second device consists in appeals to the imagination. Give the pupil music which lends itself readily to this end, such as MacDowell's little *genre* pieces, Mendelssohn's "Fantasie," Op. 16, No. 2; *The Trumpet Vine,* Grieg's *Lyric Pieces,* and the like. Let the pupil fabricate stories about these pieces, and then proceed to express their details in his playing, in such a way as to present to the hearer the picture which is in his mind.

Finally, keep up your own personal enthusiasm for the work, which must have its due reaction upon the pupil. Be up-to-date in new music, new ideas about teaching, new perspectives over the whole field of musical endeavor. Never rest satisfied in the thought that you have solved all your problems, that your system of technic and interpretation is the last word; for one of the greatest joys in the musical profession is that it is a living issue, and that there are always new depths to sound, that there is a perpetual freshness in its daily expanded beauties.

A Left-Handed Pupil

I have a left-handed pupil who persists in reading and playing the notes written for the right hand with the left, and the left with the right. At first she could not differentiate between the up and down of the keyboard (above and below Middle C). Her reading at lessons is almost impossible, due to this complex of hers.

In assigning a new lesson, have the pupil practice it solely with the hands separately, so that the two parts cannot become mixed in her mind. At the following lesson, let her play the left-hand part while you play that for the right hand, and then reverse the process. If she can do this well, she may be permitted to put the hands together during the ensuing week—otherwise they must be kept separate for a while longer. For the present, whenever she reads over new material, let her do it with one hand at a time, while you play the part for the other hand.

The Musical Scrap Book

Anything and Everything, as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

NOT GUILTY, BUT DON'T DO IT AGAIN

PICCINI cut such a poor figure in the famous "Gluck-Piccini Opera Fight" in Paris in the days of Marie Antoinette, that we are apt to lose sight of the fact that he was an excellent musician even if inferior to Gluck. In "Great Italian and French Composers", George T. Ferris tells us something of his childhood in Naples.

As a boy he was admitted to the Conservatory, and growing impatient of his studies, attempted to compose a mass. The great Leo, chief of the conservatory, "sent for the trembling culprit," says Ferris.

"'You have written a mass?' he commenced.

"'Excuse me, sir, I could not help it,' said the timid boy.

"'Let me see it.'

"Niccolo brought him the score and all the orchestral parts, and Leo immediately went to the concert-room, assembled the orchestra, and gave them the parts. The boy was ordered to take his place in front and conduct the performance, which he went through with great agitation.

"'I pardon you this time,' said the grave maestro at the end; 'but, if you do such a thing again, I will punish you in such a manner that you will remember it as long as you live. Instead of studying the principles of your art, you give yourself up to all the wildness of your imagination; and, when you have tutored your ill-regulated ideas into something like shape, you produce what you call a mass, and no doubt think you have produced a master piece.'

"When the boy burst into tears at this rebuke, Leo clasped him in his arms, told him he had a great talent and after that took him under his special instruction."

After such teaching it is no wonder Piccini grew up into a timidly conservative musician quite unable to match the bold, untrammelled genius of Gluck.

In the arts often those who have the largest rewards are those who deserve them least and complain most loudly.—ALFRED KALISCH.

BACH'S BURIAL PLACE

As MOST musicians well know, the body of Mozart lies in "an unknown grave" in a Viennese cemetery. Not many know that until quite recently the exact whereabouts of the grave of Johann Sebastian Bach were also unknown.

Bach died July 28, 1750. His body was placed in St. John's cemetery at Leipzig, but owing to transformations this burial ground underwent the location of his grave was lost. It must be remembered that during his lifetime Bach remained a somewhat obscure country organist whose career was in no ways comparable with that of his splendid contemporary, Handel. Not until Mendelssohn, inspired by his teacher, Carl Zelter, took occasion to revive the works of the grand old Cantor of Leipzig, did the significance of Bach become apparent. Meantime, however, his grave had lost its identity.

From a footnote in A. Pirro's book, "Johann Sebastian Bach, the Organist," we learn that "during the progress of general disinterment incidental to the devotion to other uses of the land occupied by the cemetery, Bach's remains were found and identified by most scientific methods. In August, 1900, took place the official ceremony of reinterment in a stone sarcophagus contained in a crypt constructed for the purpose at the foot of the chancel steps of the new St. John's Church. . . . By its side, enclosed in a similar receptacle, lie the ashes of Gellert, the poet."

MOZART'S "SHIVER MUSIC"

A BRIEF but interesting analysis of Mozart's peculiar genius appears in "Variations on the Theme of Music," by W. J. Turner, a book of musical essays chiefly of interest to English readers. Mr. Turner finds Mozart's genius many-sided, and among other things has this to say about it.

"It is not astonishing that a mind so well balanced as Mozart's should show so great a sense of humor. In this he surpasses all other composers, and since the sense of humor is essentially intellectual, it is natural that Mozart, the most intellectual of composers, should be the greatest master of comic opera. But what is altogether unexpected is his power to make one's flesh creep.

"Nothing has ever been written of such truly diabolical verve as the aria for the Queen of Night in 'The Magic Flute.' It is the rarest event to find a light soprano who can sing this at all; it is certain that we shall never have it sung so as to do full justice to its startlingly cold-blooded ferocity. Yet the aria has the smooth, glassy surface of a mere bit of coloratura virtuosity; but it is the surface of ice beneath which is the fathomless black water. This sinister ambiguity of much of Mozart's music is a quality quite apart from the more familiar power of striking the imagination which he shows in the music which announces and accompanies the entrance of the statue at the dinner-party in the last act of 'Don Giovanni.' This is the most famous of Mozart's dramatic touches, and there is not a more thrilling moment than this in the whole of Wagner's 'Ring,' or indeed in any opera that has ever been written."

GLINKA'S GOOD FORTUNE

JUST as Tschaikowsky was able to give his time to composing symphonies the world of music could ill spare because Mme. von Meck endowed him with an income, so Glinka, the founder of modern Russian music, was able to write "A Life for the Czar" thanks to a sudden accession of fortune which made him a man of independent means.

"In the spring of 1827," Montagu-Nathan tells us in his life of Glinka, "a highly placed acquaintance, aware of a desire on the part of Glinka's father to improve his financial resources by means of speculation, advanced a considerable sum of money—apparently on the security of 'an unblemished reputation'—and was able to repay himself handsomely when the time arrived to share the proceeds. Through this sudden change in his father's position Glinka found himself relieved of any necessity of following a remunerative calling, and threw himself into what has been described as a life of 'frenzied dilettantism.'

"He joined his friends in a series of musical revels of which he gives the fullest particulars in his 'Memoirs.'"

Montagu-Nathan describes one of these "revels." Glinka and his friends "embarked in boats decorated with Venetian lamps. On one they carried the trumpeters of the Household Cavalry; on the prow of another was a small piano at which Glinka presided as conductor." Glinka's friends sang solos and the trumpeters played flourishes between numbers.

GRIEG AND THE DRAMA

Two great Norwegian dramatists played a great part in the development of Grieg's genius. Ibsen's invitation to Grieg to write the incidental music to "Peer Gynt," and the music itself brought lasting fame to the young composer. Hardly less significant was a similar invitation from Björnson, which resulted in the incidental music to "Sigurd Jorsalfar," now frequently heard in the concert-room which of course includes the radio studio.

Regarding this music Henry T. Finck quotes Grieg himself as saying: "The play was to be produced at the Christiania Theatre after such a short preparation that I was allowed only eight days to write and orchestrate the music. But I had the elasticity of youth and it went."

"Björnson," remarks Finck in his Grieg biography, "was not present at the first production (1872), but he was at its revival the following May. It was anything but a good performance; the music must have been literally 'executed,' for the composer relates that he suffered such tortures when Hammer who was a good actor began to sing that he would have been glad to hide himself, and instinctively he bent over more and more, cowering in his seat, until Björnson poked him in the ribs and said, 'sit up properly.'

"'I started as if stung by a wasp,' Grieg added, 'and thenceforth to the end I behaved myself and sat motionless on the scoffer's chair.'

"Nevertheless, the occasion was a triumph and after the performance the two authors went to Björnson's and lunched on 'some delicious old cheese.' The children, too, came in, exclaiming 'Just think, we were up in the 'paradise,' and we saw papa and Grieg come on the stage.'"

"Paradise" is evidently Norwegian for the "Peanut Gallery."

"THE real problem in the future lies in the question as to whether people will be stimulated to make their own music. A nation of listeners is only partially musical. It would be a sorry day for our artistic outlook were all our music provided by specialists. A musical people is really one in which the dividing line between professional and amateur is so faint as scarcely to be recognizable, and in which the vast majority of the public can enjoy music.—*Dr. W. G. Whittaker.*

TSCHAIKOWSKY'S "FOUR SYMPHONY"

TSCHAIKOWSKY wrote his Fourt phony while recovering from the of his disastrous marriage. He d it to Nadejda von Meck, the stra generous woman who endowed hi an income of $3000 a year without met him personally, her wish bei he be free from financial difficu that he could compose in peace.

Mme. Von Meck was the wido Russian engineer to whom she wa ful during a long period of povert which he rose to fame and fortune. her husband's death she went to Moscow where she heard some of kowsky's music and recognized hi ability.

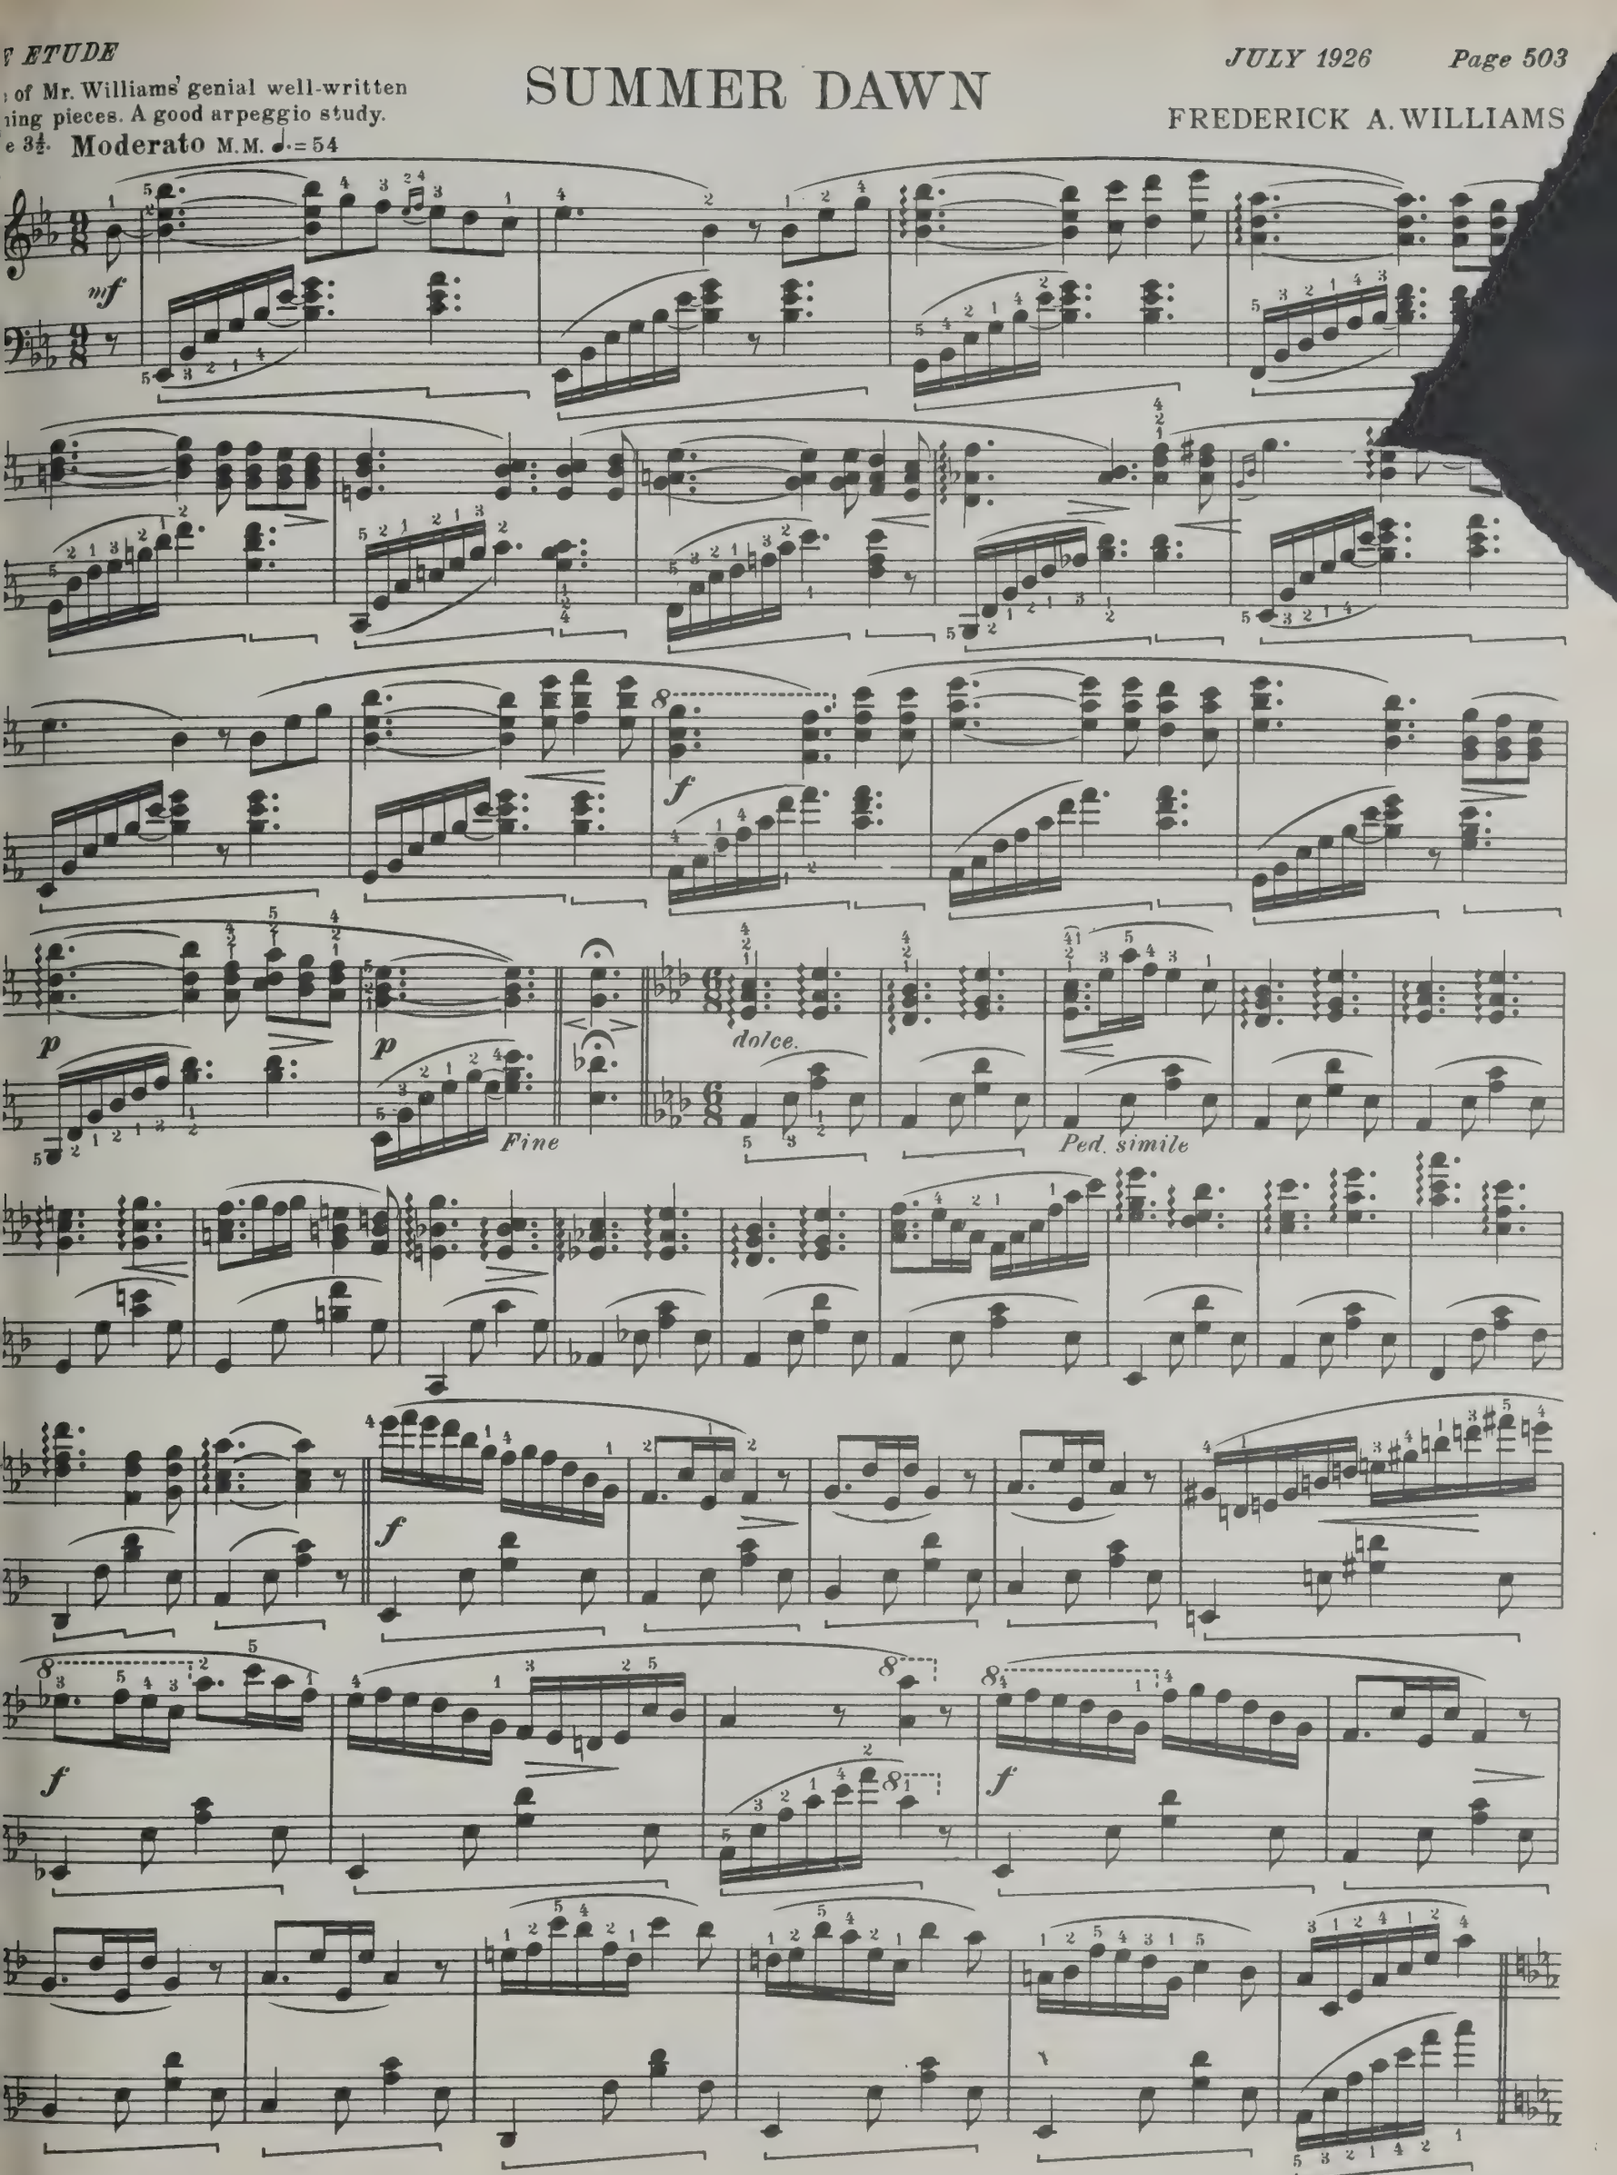
How much Tschaikowsky app this is shown in his letters to he the symphony was in progress. Venice he wrote: "No one of chestral pieces has cost me so muc but on no one have I worked wi love and devotion. At first I only by the wish to bring the sy to an end, and then I grew more ar fond of the task, and now I cann to leave it. . . . How glad I it is *our* work, and you will kno you hear it how much I though you in every measure! If you w would it ever have been finished?

"When I was in Moscow and that my end was about to come, on the first draft, 'If I should die send this to N. F. Von Meck.' I the manuscript of my last compos be in your possession. Now I am well, but thanks to you in a pos give myself wholly to my work, an lieve that I have written music whi not fall into oblivion. Yet it is that I am wrong; it is the peculia of all artists to wax enthusiastic o youngest of their productions."

"Our best musicians too often u eign languages, whereas our best can just as well be set to the best E —ELEANOR EVEREST FREER.

HAYDN'S VISIT TO HERSC

SIR WILLIAM HERSCHEL, discov the planet Uranus, was also a m Haydn, when in London, paid him which he described in the following letter:



"On June 15 I went from Win Slough to Dr. Herschel, where I s great telescope. It is forty feet lo five feet in diameter. The machi vast, but so ingenious that a single m put it in motion with ease. There a two smaller telescopes, of which twenty-two feet long and magnif thousand times. The king had tw for himself, of which each m twelve *Schuh.* He gave him one th guineas for them.

"In his younger days Dr. Hersch in the Prussian service as an oboe In the seven-years' war he desert came to England. For many years ported himself with music, became c at Bath; turned, however, to astr After providing himself with the ne instruments he left Bath, rented a not far from Windsor, and studi and night. His landlady was a wido fell in love with him, married hi gave him a dowry of £100,000. this he has £500 for life, and hi who is forty-five years old present with a son this year, 1792. Ten yea he had his sister come; she is of the est service to him in his observation quently he sits from five to six under the open sky in the severest c

Hair Dressers of many nations have acclaimed the Nestle Meter Scale

The Machine that Reads Hair—
enthusiastically welcomed by Master Hair Dressers Association at the Hotel Commodore, New York.

The Machine that "prescribes" the Permanent Wave

This scientific instrument makes possible a new and perfected system of permanent waving. It discloses the true facts concerning the character of your hair—*in advance of the wave.*

In the Nestle Laboratory in New York, it "reads" a strand of your hair and determines the treatment that suits each individual case.

The Nestle Meter Scale in New York helps your own hairdresser give you the Perfect Permanent Wave

"Facts first, then the wave"—that is the slogan of CIRCULINE operators in thousands of establishments all over the United States. You get the precise style of wave you want—because the CIRCULINE permanent waver works with Knowledge instead of Guesswork.

Nestle's Circuline Process

The Nestle *Circuline* Process follows to the letter, the reading of the Nestle *Meter Scale*. It scientifically adapts the treatment to the hair . . . It makes the work of the Nestle waver sure—and it makes results perfect.

Wash or Shampoo As Often As You Like

The CIRCULINE Permanent Wave stands washing, bleaching, dyeing, shampooing, rain or fog, sea or spray. And it will make your hair grow healthier than before, because you need no longer subject it to hot marcel irons or nightly curlers.

How to Have Your Hair Rea
The Nestle Laboratory Reports to You Dire

Just fill out the coupon below, and en close a small strand, cut from your to hair, (about as thick as the lead in a ordinary pencil—and at least five inche long.) Enclose $1 deposit—which will b deducted from the price of your next pe manent wave, anywhere in the Unite States where the CIRCULINE Process used. (Over 6,000 hair dressers an beauty parlors use Nestle Permanen waving apparatus.) The Nestle Compan guarantees the refund of your deposit.

Mail This Coupon Today

The Nestle Laboratory will then sen you its official card, showing the resu of your hair test, and containing explic directions to your permanent wave stating exact Circuline treatment r quired for any type of wave you wan

NEW BOOK PUBLICATIONS

of Music and *about* Music

ALBUMS OF PIANO MUSIC

Album of Song Transcriptions and Variations

FAMOUS MELODIES—SACRED AND SECULAR

Price, $1.00

Who does not love the old familiar songs? One never tires of their beautiful melodies, often fraught with fond memories. In this album will be found the most popular of these favorites, dressed in attractive and brilliant pianistic settings. These arrangements carry an appeal to both pianists and listeners. As none of them go beyond Grade 5 in point of difficulty (many being in Grades 3 and 4) they may be played by any performer of moderate ability.

Twelve Mother Goose Melodies

By W. Berwald **Price, 60 cents**

The Mother Goose rhymes always interest young children and the clever musical settings given them in this little album add to their charm. The text is given, although they are not intended for singing. Early Grade 2.

Musical Moments

By Mrs. H. B. Hudson **Price, 75 cents**

Twenty-five little piano solos, a duet and a novelty for one piano—eight hands comprise this collection of attractive recreation material suitable for use with the instruction book. Grades 1 and 2.

Celebrated Light Overtures

Piano Solo Album—Price, $1.00 Piano Duet Album—Price, $1.50

Piano arrangements of the standard overtures are always in demand and performers who supply the musical background for motion pictures, teachers who have pupils somewhat advanced and all good piano players will find much that is attractive in these volumes. These arrangements, if desired, may be played together as pieces for two pianos, six hands. Probably the best description of these albums is the list of contents: *Bohemian Girl*, Balfe; *Festival Overture*, Leutner; *Hungarian Lustspiel*, Keler-Bela; *If I Were King*, Adam; *Jubilee*, Weber; *Light Cavalry*, Suppe; *Marriage of Figaro*, Mozart; *Mignon*, Thomas; *Orpheus*, Offenbach, and *Pique Dame*, Suppe.

PIANO INSTRUCTION

Middle "C" and the Notes Above and the Notes Below

By Lidie Avirit Simmons **Price, 75 cents**

Very easy and very attractive material for very young piano beginners. The student begins with Middle C and learns one note at a time, going above and below. Frequent writing exercises are given as well as many pretty little pieces. The book is profusely illustrated.

MUSICAL READINGS

Popular Pianologues from the Repertoire of Coyla May Spring

By Clay Smith **Price, $1.00**

The outstanding successes of these well-known Chautauqua performers have been included in this volume. The variety is excellent, one being patriotic, another optimistic, some with a touch of pathos, others sentimental, then there is a comedy, a juvenile number and last, but not least, a sacred selection.

SONG ALBUM

Each in His Own Tongue

THREE ART SONGS

By Thurlow Lieurance **Price, $1.00**

Real American "art songs" these. The verses by William Herbert Carruth are superb in thought and Thurlow Lieurance has made eloquent musical settings which are strongly emotional in content and require a rather declamatory style of rendition. The book is most artistically printed and bound.

MUSICAL LITERATURE

Great Men and Famous Musicians on the Art of Music

By James Francis Cooke **Price, $2.25**

The opinions of some of the most eminent personages in the business and professional world are given in this book and their views as presented by the author make most interesting, inspirational and instructive reading. Among the contributors are Thos. A. Edison, Charles M. Schwab, Richard Strauss, Gustav Mahler, Rupert Hughes, Ralph Modjeski, Edward Bok, Dr. Frank Crane and many others as well known.

Elementary Piano Pedagogy

By Chas. B. Macklin **Price, $1.50**

Those first pupils are a problem; and the teacher who arrives at a solution of holding their interest while trying to get into their consciousness a working knowledge of the fundamentals of music, has made a real achievement, and this is just the thing that the author of this book has made many times easier. Every teacher and prospective teacher should read this book.

How to Succeed in Singing

By A. Buzzi-Peccia **Price, $1.50**

When a man has achieved a notable success in any field of endeavor, his opinions on that subject bear the stamp of authenticity. Senor Buzzi-Peccia, who has had as pupils some of the most prominent artists of the operatic and concert stage, gives advice in this book that should prove of almost incalculable benefit to any singer desiring to enter the profession.

ORCHESTRA

Senior Orchestra Book

Compiled by Wm. H. Mackie

Orchestra Parts - Price, 35 cents

Piano Accompaniment - Price, 65 cents

Especially suitable for High School and College orchestras. The instrumentation includes parts for solo and obbligato violins, saxophones, etc. Almost any combination that includes violin and piano may be used.

PIPE ORGAN

Organ Transcriptions

By Orlando A. Mansfield

Price, $1.25

Taking some of the best piano and violin compositions in our catalog, Mr. Mansfield has made playable, interesting pipe organ transcriptions of them for this album. None of these pieces are difficult; most of them are in Grade 3.

CHOIR MUSIC

Anthem Glory

Price, 35 cents

The success of our anthem books is due to the fact that they supply, at a very reasonable cost, a generous collection of good anthems for a variety of occasions. "Anthem Glory" should equal, if not exceed, the success of its predecessors.

Worth-While Material for Violinists in First and Second Grades

THE JUVENILE VIOLINIST

By F. A. Franklin, Op. 48

TEN short and melodious pieces for the juvenile violinist. These numbers are all in the first position and may be given at an early period in the student's course of study, providing excellent supplementary material to any violin method. The numbers are in varied styles and rhythms, moderate in length and admirably suited for first recital pieces.

Price, $1.00

FIVE FIRST POSITION PIECES

By Authur Hartmann, Op. 35

FOR teaching purposes or for first recital numbers, these five excellent compositions are unexcelled. Each selection proves that the composer, Arthur Hartmann, has a marked vein of originality and the enviable gift of melody, and all of them will interest every teacher and ambitious student of the violin. The titles of these five fine numbers are: A Frolic, Cradle Song, Dance of the Marionette, Swing Song and The Song of the Top.

Price, 75 cents

ALBUM OF FAVORITE FIRST POSITION PIECES

A VOLUME of twenty-two violin compositions, which possess real worth. Teachers here have an ideal work for instructive purposes for the beginning violinist, who will find in these numbers interesting recreation material.

Price $1.00

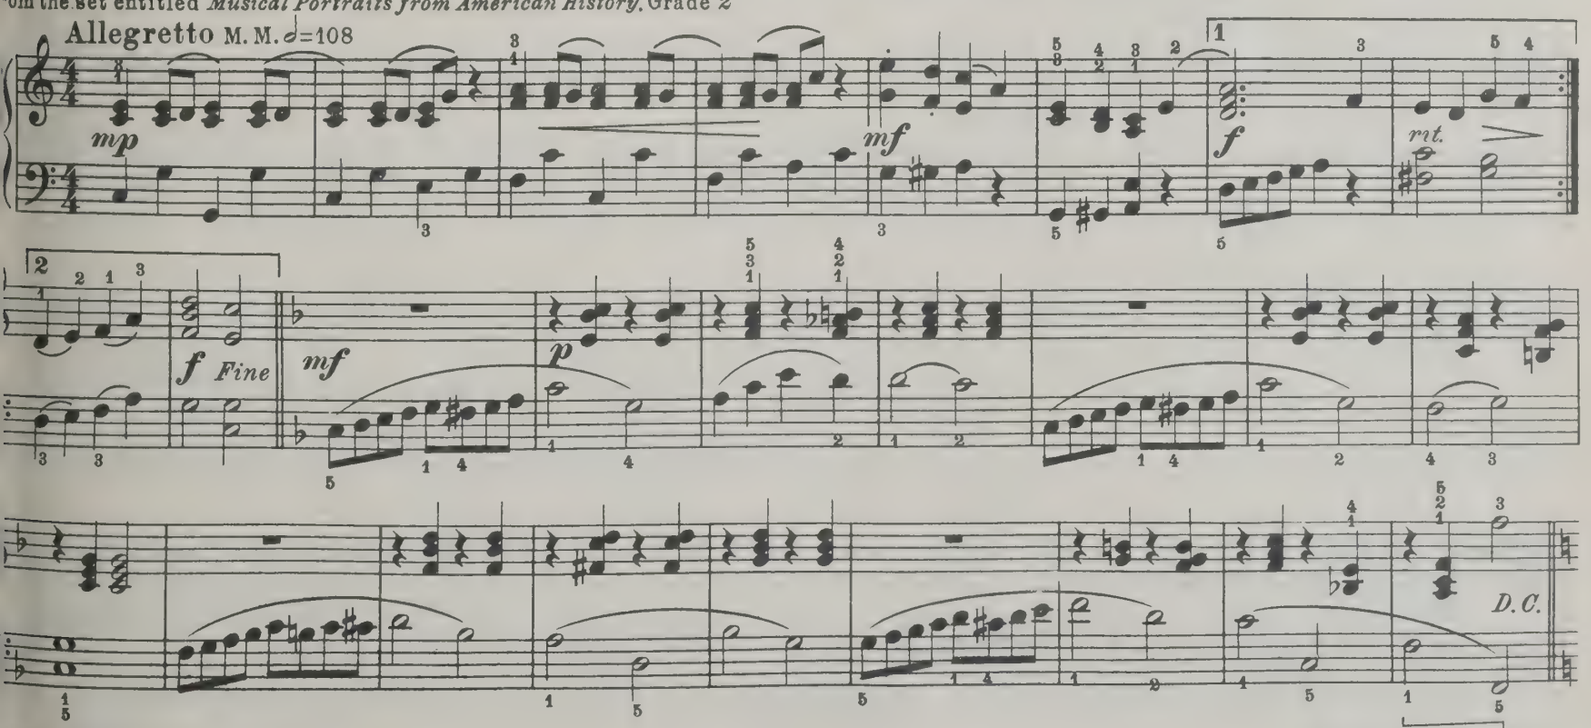
ANDREW JACKSON



THE WAR OF 1812

DOROTHY GAYNOR BLAKE

Down in the land of lotus and cotton
There lived a man who will ne'er be forgotten;
Andrew Jackson was his name,
His courage brought him fame.

I never tire when they tell that old story
Of how at New Orleans he fought for "Old Glory"
He was wise and brave and true—
We'll always honor Jackson.

The Education of the Average Student in Music

(Continued from Page 496)

its of view of the symphonist and zist as artists, we find in the one aspiration, the spirit of adventure, g look to the past and a hopeful the future, in the other a sav- mental energy, slight knowledge past, and a perfectly safe and prof- conformity to the style of the

schools of music should aim to symphonists, albeit dull ones. If ce a true genius should emerge ne mass of average minds let all for an age without its genius is indeed a dark age. But we must not wait for a genius to appear who shall do our work for us. A host of well-trained teachers sent out equipped with a thorough knowledge of the art of music, and of methods of imparting this knowledge, who know the pleasant feel of musical notes at first hand, and who throw themselves into the deeper and cleaner channels of contemporary progress, can brush a surface of fresh tints over the drab life that many people are forced to live. And this recoloring of existence is the best function of art.

Great Men on the Power of Music

(Continued from Page 492)

language of music is infinite; it all; it is able to express all."
—Balzac.

cannot imagine a complete educa- man without music."

ic is one of the most forcible instru- or training, for arousing and for ng the mind and the spirit of man."
—W. E. Gladstone.

e are in music such strains as far any faith which man has ever had ftiness of his destiny."—Thoreau.

"Music cleanses the understanding, inspires it and lifts it into a realm which it would not reach if it were left to itself."
—Henry Ward Beecher.

"Music, once admitted to the soul, becomes a sort of spirit and never dies."
—Bulwer.

"Take a music bath once or twice a week for a few seasons. You will find it is to the soul what a water bath is to the body. It elevates and tends to maintain tone to one's mind. Seek, therefore, every clean opportunity for hearing. Purchase some kind of instrument for the home and see that its beneficent harmonies are often heard. Let music be as much a part of a day's routine as eating or reading or working."—Oliver Wendell Holmes.

"We can do without fire in the house for half of the year, but we must have music the year round."—Sidney Lanier.

"Music is fundamental—one of the great sources of life, health, strength and happiness."—Luther Burbank.

"The man who disparages music as a luxury and nonessential is doing the nation an injury. There is no better way to express patriotism than through music."
—Woodrow Wilson.

"Music, rightly taught, is the best mind trainer on the list. We should have more of the practical subjects, like music and drawing, and less grammar and arithmetic."
—Dr. Charles Eliot.

"If young men had music and pictures to interest them, to engage them and satisfy many of their impulses and to enliven their days, they would not go to the low pleasures of the streets; they would have an alternative and would be too fastidious to do so."—George Bernard Shaw.

A Poet Musician

TAS GRAY, author of the famous *Written in a Country Churchyard*, rue music lover concerning whom Krehbiel once wrote an interesting ublished in a volume called "Music anners." Thomas Gray, 1716-71, e world his debtor by the careful ion of some valuable Italian manu- Krehbiel quotes his biographers, whom, Mason, says:

chief and almost the only one of Gray's) amusements (if we except ient experiments he made on flowers to mark the mode and progress of getation) was music. His taste in was equal to his skill in any more it science. It was founded on the dels, those great masters of Italy urished about the same time with his favorite, Pergolese. Of his, of Leo's, Buononcini's, Vinci's and Hasse's works he made a valuable collection while abroad, chiefly of such of their vocal compositions as he had himself heard and admired. . . His instrument was the harpsichord, on which, though he had little execution, yet when he sung to it, he so modulated the small powers of his voice as to be able to convey to the intelligent hearer no common degree of satisfaction."

What a charming combination: a poet supremely gifted, who loved music and flowers. Tom Moore, with his combined gift for music and poetry and his Irish voice, was just such an artist. Our own Stephen Foster might have been still another had his earlier education been along broader lines.

Teams and Flags

ETUDE:

o many good ideas from THE ETUDE. little "stunt" last year which worked ell with my pupils, when I felt that rest was lagging.

led the whole class into two teams, children elected their captains them- For every good lesson I pasted a tiny the name of that pupil; then, at the he week, the team having the most a larger flag pasted on its side. as done for about fifteen weeks. At the end of that time the members of the team having the most big flags were to have been the guests of the losing side at a picnic; but in our case the result was a tie, so that everybody was happy at a general picnic. We had this in the country, and, as it rained, we had to eat in the farmer's barn, but that was even more fun. We had nearly seventy-five present, including several mothers as chaperons.

Yours for anything new in teaching,
ELIZABETH D. HART.

The KIMBALL in Every Clime

THROUGHOUT the years since Kimball Pianos were first manufactured, they have been given the most severe climatic tests—through heat and cold, dryness and moisture. In our own country—the homes of the valleys and the mountains, of the coast regions of the east and west, or from the lakes of the north to the warm, moist vicinity of the Gulf—the Kimball has earned an enviable reputation for excellence of *tone* quality and for *staying in tune.*

The same commendation comes from the use of the Kimball in the tropical countries of South and Central America, Mexico, the Philippines, Cuba—from the varying conditions in Australia, Spain, and Alaska.

The unanimous admiration of the Kimball must, therefore, come from the *merit of the product*—its reliability under all conditions. Correspondence is invited whether you are considering the purchase of a grand, a reproducing grand, an upright, a player piano, pipe organ, or phonograph.

The Singer's Etude

Edited for July by HOMER HENLEY

It is the Ambition of THE ETUDE to Make This Voice Department "A Vocalist's Magazine Complete in Itself"

The Will-O'-the-Wisp

Mr. Homer Henley has had a long and honorable career as both singer and teacher, in the Pacific Coast States. He represents the best methods of such undoubted masters as Giovanni Sbriglia, Sir Charles Santley and William Shakespeare; and his pupils have risen to many positions of importance. Particularly has he been successful in transmitting the traditions of the oratorio style.

OF ALL THE definitions of which the word "singing" is susceptible, probably none could more aptly describe its charming, heart-breaking impermanence than the word "elusive." The singing voice is a bird of passage, a Will-o'-the-wisp dancing ever ahead just beyond our reach, leading us over strange marshes, flickering above dangerous bogs where quicksands wait to snare us. It is such an intangible thing—the voice! So close to the soul, so far from physical imprisonment! The fairest in promise, the most inconstant in fulfilment! Yet many have captured it and held it long; held it vigorous, beautiful, pliant to every wish and shade of thought.

These skillful beings we know as the "great" singers. What sort of greatness do they hold in common possession? That of vocal quality, voice texture, fibre, sound, timbre (as the French say it) or exquisiteness. If, then, "greatness" of voice is a certain sound or quality held in common by *all* of this class, it is reasonable to suppose that there is a standard by which the possessors of this "greatness" are able to identify, measure and adjust this volatile quantity. This standard is based upon a common qualification peculiar to these "great singers," their management of two great elements, breath and resonance.

The Great Singers' "Method"

THE WRITER of this article was at one time musical critic on a metropolitan daily newspaper. As such it was his duty to obtain interviews with the great singers of the world, interviews which were of a most informal and friendly nature.

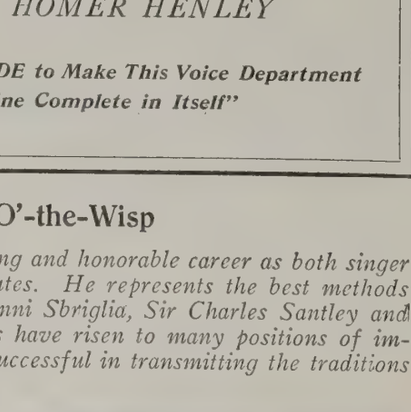
These singers showed him how and where they breathed, and how and where they "placed" their voices. The point of interest here to the student and teacher is that all these "great singers" breathed in exactly the same manner and in the same place. All these great singers tuned their voices in exactly the same manner and in the same place. There was no variability in method. That is why there is a standard. That is why great singers are in a class by themselves. That is why they are great.

After all it is simple enough, that is, if we are simple enough ourselves, and follow like children instead of losing our way in technical entanglements. The great singers are all children: they have simple, child-like minds that function in direct, straightforward lines. The greatness of their simplicity deflects them automatically from every snare of vocal confusion: bombast, chicanery or well-intentioned befuddlement. Their instinct is for the greatest and they bend with it as the willow divining-rod twists toward the hidden gold. What is the secret of that instinct? Ah we might ask them, but I doubt if they could tell us!

Yet that need not deter us. Our concern is, can we, without their genius for simplicity, acquire what they have? I think we can. But, like Paul, to win the race we must divest ourselves of every weight, and disperse the clouds of theories which surround us. Do great singers become great because of a profound knowledge of anatomy or a comprehensive mastery of the laws governing sound waves? We who know great singers know that they are not scientists. They are artists. Not that they lack the mental power or application; but simply that their brains function naturally in other directions.

The great singers are essentially creatures of instinct and intuition. They are acutely sensitive and receptive. Their instinct tells them exactly what they want; their intuition leads them infallibly to their needs. So the great singers are never led aside by the plausible arguments and representations of vocal technicians. Their musical ear is their guide for tone, and, as for breathing, I believe that the right way is simply passed on from one to another—a tradition.

Simplicity the Keynote in Breath Control



IT SEEMS to be the melancholy fate of the majority of mankind to go at things the wrong way or the hardest way or the longest and most awkward way. It seems never to occur to them to be simple. Yet all great invention and discovery has resulted from simple and direct thought and methods. The greatest architecture is the simplest. The greatest writers present their thoughts in the simplest language.

In singing it is simplicity that leads to the heights. Great singers all breathe one way: they hold their chests high all the time they are singing and every time they sing. The shoulders are not raised, but kept down and back. If through carelessness, forgetfulness or the excitement of the emotions, their shoulders are raised, they have done the thing correctly so long that right control continues to function despite technical lapses. But their chests are always held high. They flatten the abdomen somewhat. They incline the upper body well forward toward their audience in an attitude of ingratiation.

Put yourself in this physical attitude. Gracefully incline the body forward—not too much—expand the ribs and upper chest and breathe. Breathe three or four minutes without singing: but maintain the high chest, especially in expiration. (Have you ever noticed that the chests of the great singers never collapse in singing, even at the end of the longest phrase? If the great singers *all* do it that should be warrant enough for you.) Then sing something, still breathing the same way and standing in the same position. You will feel the abdomen retract, but you will be chiefly conscious of the operation of the muscles of your back and sides. Melba used to say that she got her high tones from the small of her back. Lilli Lehmann said the muscles of the back were used to press the breath firmly against the arch of the chest. Sbriglia, the teacher of Jean De Reszké and Nordica, laughed his famous, thin, sardonic laugh at all directions but those concerning the point of support, namely, the breath pressed against the chest-tension muscles by those of the back. Lamperti, Shakespeare, as well as all the old Italian masters who wrote of the voice, dwelt constantly and insistently on the use of the muscles of the sides and back.

Ease of Emission

NOW WILL BE felt a singular ease in the emission of your voice, a firm freedom of the throat region, and a sense of enjoying complete power over the outgoing breath-stream. The act of right breath-control pleads its own cause. It needs no advertisement, no recommendation. Like all supremely right things, its simplicity and the inevitable progress that results carry their own conviction.

HOMER HENLEY

Tone Placement

AFTER breath-control the one remaining requisite is beautiful resonance. Jean De Reszké used to say that singing was "a matter of the nose." What a fine fury of dissent and acclamation that statement did stir up, to be sure! Its partisans raved enthusiastically of nothing but nasal vibration—aiming the voice between the eyes. Its opponents were none the less emphatic in their defense of pure "school" singing, the lifted, soft palate, the open throat as differentiated from the "nasal whine."

Let us search for the truth where it most abounds—among the great singers. Where do they "place" their singing voices. Let us go to the phonograph, put on the record of any great singer's voice, take a chair and sit down with our ears inside the opening of the sound box. Let us strip our minds of every vestige of preconceived ideas, theories and technicalities with which they have been wrapped and stifled since we became interested in the voice. The recorded tones of the great singer will bathe the naked mind in a flow of new hearing if we throw bodily out of our mental houses every smug label of tone and tone-placement, and listen to it!

What do we hear?

The Italians, new and old, call the voice "the bell." I used to think they meant something relating to *bel canto*. Not so. By "the bell" they mean the head, or, literally, the voice ringing like a bell in the head. They say, "beautiful bell." They mean that rings with bell-like sonority in Do they mean in the mouth? mean in the head above the mout nose, then? No. In those va lared caves back of the nose, f the soft palate, and high above it one of those marvelously dove-ta plates of the skull.

The head-cavities of the gre are extraordinarily open at all t if we will hear the voice ringi head, the sound will be much as t of a violin or 'cello. We may a golden gong reverberating in room, a fountain of ringing coi in a marble basin, or a thous things; but if we hear it aright, beauty always.

One may say, "Oh yes, he n nasal sound. Of course, I hear t body can." The difference betw the great singers hear and wha person hears is the measure of t ence between his voice and the v great singer. They are great s cause of what they hear; he is because of what he does not hear

Another cries, "I must have a b How shall I get my voice up the head-cavities?" To him I say, " teacher. Ask any teacher." He you a mirror and show you how t of "N" as in the word "gong" will depress the soft palate and back of the tongue, and thus d breath-stream so that part of it the buccal chamber and part of post-nasal cavities.

You are now in the position o who has been set before a master whose hands has been thrust paints and a canvas, and who bidden to reproduce that masterpie have the physical materials but n edge. You have still to become a The child must see countless grea ings; he must compare them; he to reproduce their equal through seeing. You must hear countle singers; you must compare the must try to reproduce their equal your own hearing.

Again I say, *Listen!* The differ tween what is known as the nasa and the tone the great singers er the difference between a Titian ar partment-store chromo. The onl road is the ear—your ear! But be helped to hear through another teaching if that teacher's ear is fine to hear as the great singers hear, teachers are always great hearers.

The Foundation Tone

THERE IS another thing that y learn to hear: that is the fo tone underlying the smoothness great singers' voice quality. It compared to the roots of a tree, deep ground, or the ten stories or so crete which go under the earth's to support a sky-scraper. There is to all rightly placed voices (wheth be lyric sopranos or basso profun weight, a foundation, without wh voice would be lost, for instance, orchestra, and in a very large audi It constitutes the "professional" which everyone recognizes instantl basic substratum of rich authority the non-professional lacks. Its val sists in keeping the voice, even the notes of high sopranos, singing chest. (This does not imply ches or "chest register tones," however.)

Giovanni Sbriglia, one of the t with whom I studied and one of the est teachers who ever lived, used that keeping the tones in the che the secret of singing, but that ver people in the world, including ever

own pupils, understood this little- but quite simple principle. The has obtained the most astonishing with it in his own teaching. It into play the enormous resonating of the chest cavity giving the voice y" apparently obtainable in no other

us go again to our phonograph and to the great voices of the great .. If our ear detects nothing to- et us go to-morrow. Let us go, ly until we hear something new, until we have learned the texture and weave of the new sound, and have analyzed and dissected its every fibre, but until we can imitate that sound successfully with our own voices. New and unsuspected tonal worlds will then open to our amazed ears and understandings and, as the mists of technical obscurities fade from the windows of true vision, we shall thank God that we are learning how to be as children again, for only so can we learn to become great.

Curing Audible Breathing

IBLE breathing among singers is by the incoming breath striking the ilate, that curtain hanging between ccal chamber and the throat, and up a vibration between it and the x behind it. The soft palate is a r easily amenable to discipline. It utomatically when one yawns. It ie obligingly if one, *thinks* a yawn.

When the soft palate is raised, the loose curtain which caused the sound is drawn up out of the way and the incoming breath is not heard. Try it yourself. Yawn widely while inhaling a brisk breath. You will find the inhalation to be noiseless. Then think a politely-suppressed yawn, and, with a little practice, you will find that your breathing for singing is quite inaudible.

Bondage and Deliverance

EGARD to tension in the regions of ngue, jaw and neck, most students doubt gone through the experience ing advice of many teachers in ng for what they feel must exist ere; namely, an unerring road lead- the goal of right singing.

ny case, almost without exception, eachers sought to apply local meas- the correction of my tight jaw and and my perfectly unmanageable

less extreme instructors tried sug- The tongue should just lie limp mouth, barring the sides, which be trained to rise like the sides of h and so form a sort of flume for e exit of the tone-stream. My jaw be devitalized; it should drop back- oward the neck as if beyond con- My head should be floatingly poised racefully pliant neck. My chewing s must be relaxed—and would I stroke them downward along the with the points of my fingers, just at of the ears, to convey to those but necessary "crushers" the inti- that all is not food that fills the that song was not meant to be All to no avail!

I turned to the books on singing ad all of them I could find. e sure these did not recommend easures for the relief of tension, y were amazingly vague as to the remedy. They fairly brimmed over with imposing generalities as to freedom and relaxation, but none of them told exactly how to do it in just so many words.

For the benefit of students in a similarly uncertain condition, groping about in their own consciousnesses for the help that is so often denied them, let me explain what the books on singing mean to convey but neglect to make plain. *If the singer breathes rightly and breathes rightly long enough, tension will disappear.*

Tight jaw, stiff tongue and rigid neck-tensions are caused by an unconscious effort to control the breath somewhere above the shoulders, probably at the neck. That is the root of the trouble. To correct superficial manifestations the cause of the trouble must be removed. All other courses are makeshifts that but beg the question. A protruded abdomen makes for a corresponding locking of the neck-muscles. A slightly retracted abdomen, on the contrary, is rarely accompanied by neck-tension. If the shoulders rise, the muscles of the neck are made dangerously active. If, however, a breath is filled outwards and not upwards (horizontally, and not vertically), the likelihood of shoulder and neck tension is greatly reduced.

By all means the chest should be expanded, but the shoulders likewise should be held down and the breath pressed firmly against the chest tension muscles. The troubles of the tongue, neck and jaw probably will not disappear at once, for habits are difficult things to conquer, but disappear they certainly will if the singer persists in proper breathing.

The Fleet Staccato

HE WORD "staccato" means, literally, disconnected; cut apart by means of silences. In music this the shortest sound possible to the ient creating it. In the singing means the briefest length of sound al cords are capable of producing. ot in use the vocal cords lie folded om each other in semi-circular lay- "accordeon-pleating."

e act of speech or song they spring l only to return quickly if the de- ound be short, or to lie parallel in roximity whilst vibrating for a long On staccato notes they spring for- neet and rebound; spring, meet and again and again. Their touch is ning-brief as the wet finger-tip of ndress on the steel of her polishing Between these transient touches lies as complete as the silence of inter- space, even though its duration be measured by the thousandth part of a second.

A staccato note is a complete thing in itself, and, being complete, it must needs be made beautiful. The beginner will probably produce a sound resembling the cackle of an agitated hen; but beauty can be come by, if the right means are intelligently employed.

We have seen that the mechanics of the staccato note are localized in the larynx or voice box. We have now to look at the power which sets these mechanics in motion. It is generally here that the crux of wrong staccato-note production appears. Rightly done, the staccato note is produced under force of a steady breath-pressure against the chest tension-muscles. Wrongly done, the staccato note is produced by a spasmodic movement of the abdomen; each note requiring a separate, conscious, physical bodily effort. The ef-

The Way to Sing
(C. C. BIRCHARD & Co., BOSTON, PUBLISHERS)

DEAR MR. PROSCHOWSKY—
Let me express my appreciation of your thorough understanding of the *True Art* of singing and the intelligent simplicity of your elucidations, through which I have been able to discover and use new beauties in my own voice. I commend to you those artists and students who seek the truth in singing—the beautiful and lasting art of *"Bel Canto."*
Gratefully yours,
AMELITA GALLI-CURCI.

MY DEAR PROSCHOWSKY—
I am happy in expressing my admiration of your method of instruction. Having heard your pupils, I frankly state that besides the perfect placing of the voice their diction was clear. This secret is a sure success.
TITO SCHIPA.

f a rapid staccato scale, each note
ding both a powerful abdominal re-
n and protrusion, may be better
ed than described!
physical sensation in correct stac-
inging is localized wholly at the
. The staccato is a *coup de glotte*
ke of the glottis), and if there be
of them in succession they form
ve call laughter. Right there is the
correct staccato practice. Laugh
l laugh; that is, a rapid series of
il accents on the same note, and
e, in effect, singing a rightly-pro-
staccato. A rapid laugh on any
ill do it.
will find that it eliminates auto-
matically any convulsive bodily movement and produces the little machine-gun fire of vocal pearls wholly at their proper source —the larynx. Inasmuch as any sung note, long or short, should possess the quality of roundness, it is advisable to do much of the staccato practice on a round vowel to start with: OO (as in shoe), for choice. From that sound, a rational progression to the more open AH would be, the vowel OH (as in show), AW (as in saw), UH (as in up), and lastly, AH.

Staccatos should always be done at the beginning of a practice period, as they make more demands on the physical strength than any other form of vocal exercise.

The Source of Many Ills

-CROWDING the lungs with breath
cause of many of the evils which
he path of the vocal student. For
e, when too large a breath is taken,
e balance of its control is lost, and,
ıy cases, it escapes in far greater
ınd proportion than would be the
a more moderate-sized breath were
d. It induces a condition similar
t of the Mississippi steamboat in
Twain's story. The boat was very
Its whistle was very big, and used
steam to such an extent that every
ıe whistle blew, the boat stopped.
large a breath also has the strong-
dency to constrict the muscles above
ɔulders in a sympathetic effort to hold down the struggling body of air eager to escape. A startling proportion of vocal troubles may be ascribed to this pernicious habit.

On the other hand singing on a small but controlled breath affords the most surprising revelations in the freedom of emission and the tone-quality. The amount of breath to be cut down depends, of course, upon the individual case; but if the teacher recommends the curtailment of a good third of the breath intake, in the majority of cases he will not go far wrong. One of the foundational tenets of right singing rests on breath intensity furnishing tonal-intensity. This cannot be brought about if the lungs are over-loaded.

The Vulgar Slur

slur, or scoop, in the voice is the
curving the tone with a broad sweep
ne note to another. The same pro-
ɔne with delicate, hair-line stroke,
s legato. Made slenderly, like a
crescent sigh, it is a portaménto.
ɔrtaménto, is like a beautiful and
ɔus scimitar, an instrument for the
the skilled artist only. The legato,
gnature of the finished singer, is
sical line of beauty that glides grace-
nd freely like a bird over the melo-
dscape. The slur, or "scoop," is the
ırk of crudity. Unfortunately, how-
vith many uninstructed singers, it
s a serious habit, and one difficult
come.
due wholly to lack of breath control *between the notes*. After a note is sung the singer "lets down" between that and the next note; the breath lags for an instant and, of course, the tone lags with it and must be pushed up an uneven curve to the next note. If the tune chance to be descending the scale, then the drop becomes more pronounced than before, the slur slides recklessly down the steep slope because the breath is running away too, and cannot control it.

Escaping breath between notes is the cause of the slur. Holding back the breath between notes is the remedy, a permanent and infallible one. A practice of holding back the breath, of seeming to drink it in between notes, will cause this habit to be overcome.

"The Flowering of the Lips"

s said of Sappho, the poetess of
that "her lips curled like flexible
s about the cunning niceties of her
." The Italian phrase, *fior di lab-*
erally means the flowering of the
Who does not remember the marvel-
s of Nordica, the great interpreter,
ıgly eloquent lips which modelled
meo-like chisellings the beauty of
vels; and the lips of Caruso, shoot-
like a horn, shaping and kneading his words as the hands of a sculptor shapes his clay?

The lips are the painters of the tone. Used beautifully and skillfully they strew its path with shimmering iridescence. But never stiff, rigid lips thrust out as, in the Bible, "the heathen shoot out their lips!" Beautiful, sensitive, melting lips, touching with fire and roses every thought that flows through their charming portals! This is the flowering of the lips.

Women in Eighteenth Century Orchestras

HING could be more delightful,"
esident de Brosses, "than to see a
ınd pretty nun in a white habit, with
ı of pomegranate flowers over one
nduct the orchestra and beat time
the grace and accuracy imaginable."
is that "for fine execution, and as
or of an orchestra, the daughter of
is second to none." Some of these
ısicians were famed all over Italy;
ıice used to be split into hostile camps
ɔrt of this or that singer.

But not all of these women musicians were nuns. "Young women were kept there until their marriage," says Rolland, and quotes Grosley as saying "Music was part of an education which seemed more adapted to form Lais and Aspasias than nuns or mothers of families." In this respect there is a wide gap between women's orchestras in Venice, Calif, twentieth century, and those of Venice, Italy, eighteenth century.

*program of the morning was en-
English; and it was a direct ref-
of the idea that high-grade in-
n goes of necessity with foreign
es. Not only were the majority of the songs of fine caliber and content, but also, in the working out of technical detail, musical nuance, shading and mood values, quite as serviceable as chanson, leider and aria."*—CHARLES E. WATT.

Every Experienced Teacher Realizes the Importance of Being Prepared for

A PROMPT AND SATISFACTORY OPENING

Next Teaching Season

Often the success of an entire year is due in large measure to getting a good start

Order Teaching Material NOW

Many teachers order their supplies some time in advance of the season's opening, as this affords an opportunity to examine and classify the material at their leisure. For such as these we have what we call the

EARLY ORDER PLAN

This plan is to book the annual "On Sale" orders during the early summer months subject to delivery on or before a date specified by the teacher. Orders received up to August First are combined in one shipment prepaid to central distributing points and from there forwarded at a small expense to the several consignees. The saving in transportation charges is an important item, but of much more consequence is the certainty of having one's music supplies on hand and ready for use when the pupils arrive for their lessons.

Write TODAY and tell us

The number of pupils you expect to have during the coming season.

The grades and styles of pieces desired.

The date when the material should reach you.

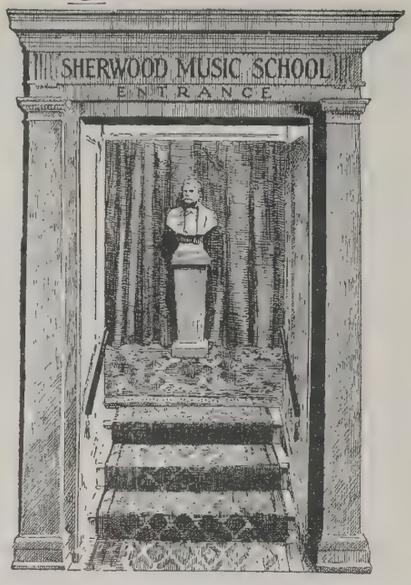
You will BENEFIT by

Receiving the best possible assortment of material sent on our liberal ON SALE terms, all not used being returnable at the end of the teaching season in June when settlement is made.

Having a plentiful supply of material on hand when ready to begin the season's work.

Saving a part of the delivery expense.

A MAIL ORDER MUSIC SUPPLY HOUSE FEATURING ACCURACY, COURTESY, DESPATCH AND ECONOMY IN FILLING THE WANTS OF SCHOOLS, COLLEGES, TEACHERS AND LOVERS OF MUSIC



Theodore Presser Co.

ESTABLISHED 1883

1710-1712-1714 CHESTNUT STREET

PHILADELPHIA, PA.

The Gateway to a successful future

ARE you interested in teaching music? In the concert field? In theatre organ playing? In Public School Music? These are a few of the professional fields for which we can prepare you. We assure you an opening in your chosen line as soon as qualified.

Teaching

Students preparing with us for teaching may take positions in our Extension Branches, of which there are more than one thousand located all over the country, or in our Chicago Neighborhood Branches, of which there are more than thirty, with others in process of establishment.

Those who come to us with previous training and experience can very quickly qualify to take positions in our Chicago Neighborhood Branches, thus gaining further experience and earning money for their own study.

Theatre Organ

Since the establishment of our Theatre Organ Department, we have trained and placed organists in positions with salaries starting from $85 to $100 a week.

Students of piano and organ, who have developed instrumental technic and musicianship, can prepare to meet the requirements of theatre playing in a very short time. Good openings are assured.

Concertizing

Chautauqua and Lyceum tours offer salaries of $40 to $100 weekly. Concert engagements are usually paid for by the single appearance, the fee being $25 to $50 and upward.

Our extensive system of Branches enables us to provide ample openings for those we train for the concert field.

Public School Music

Our two-year course leads to a Teacher's Certificate, entitling the possessor to the Illinois State Teacher's Certificate and permission to teach, without examination.

Annual salaries of $1,500 to $2,500 are available, with large outside earnings through private teaching, choral directing, etc.

More openings than we can supply applicants for are referred to us every year from school authorities throughout the country.

Our Fall term begins in September.
Write for Catalog mentioning The Etude, *and telling us which phase of service most interests you.*

Teaching Positions

TEACHING positions are available in our Thirty-two Chicago Neighborhood Branches for young teachers of piano and violin who wish to teach, and, at the same time advance themselves by study with our artist teachers; also for advanced students as soon as they are qualified to teach.

See Fall Announcement elsewhere in this issue. Write for Catalog and Teaching Position Application Blank, mentioning The Etude *and giving an account of your training and experience.*

rmony" on the part of the boy. feature of the junior high school erefore, should be massed chorus Provided that sufficient time is for choral periods of rehearsing, that methods are employed which re quick results, then choral part ill prove to be the most stimulat- ity in the whole school life and The pupils should meet in roups and sing music which will ie boy with changing voice to e, in a comfortable vocal range. ion of music should be developed ction with all the choral periods. nterested pupils will elect inten- es in elementary theory and prac- any pupils will join the music he glee club, orchestra and oper- are the outstanding group ac- the junior high school. These ons carry on the indoor activities sent the school in festivals, con- social gatherings. The older many junior high schools are in grade with the earlier classes ior high schools, and the pupils ave opportunities to take music which will count toward high aduation. This leads to a discus- ie music opportunities which the h school should offer.

Senior High School

SENIOR HIGH school should r all the music activities which should have and in addition to ive course in Theory and Prac- mony should be presented as ced course. One of the most courses is the one in Music on or Music Literature. Every ld be trained in music under- and so the course in appreciation ely valuable as we must create ve audiences for our orchestras, oups and artists, lest our art ssion fall into decadence. Credit raduation should also be given and instrumental ensemble classes sted and functioning as the rep- school glee club and orchestra Credit should be granted for outside music study of voice, an and the instruments of the orchestra. Opportunities should ed for class instruction on the unusual instruments of the in order that the high school may have as complete an ation as possible. Opportunity ping a band should be given. A s band does not take long in the making and it receives ready recognition as a great school and community asset.

Recognition for the School Music Teacher

SUMMING UP the whole discussion, we find that there is a need for the highly trained executive musician in the public schools. There are more opportunities and there is less competition in school music directing than in professional directing. A given community can support only a few musical organizations and the success of the ambitious musican depends on the law of the survival of the fittest; and so, many good professionals are without recognition because the field of opportunity is limited. This is not true in school music teaching, as each school is a community in itself and the music teacher has every opportunity to develop all features and phases of his work and all of this with a fixed salary and the added advantage of regular attendance on the part of his classes. In the smaller communities, election as supervisor of music or special teacher of music often means election as musical director for the community. When this is the case, contacts can be made with community movements and help secured for school musical projects such as class instruction in piano and violin. Instruments must be secured for the band and orchestra. The community will gladly give financial aid, if it enjoys the co-operation of the school musical organizations in the community affairs. The school music teacher must please his community and meet his people on a common ground, in the selection of program material. Much harm has been done to the advancement of music appreciation by forcing an audience to listen to music that it does not understand. Community singing is a great force in unifying the interests of the people. The participation of the "grown-ups" and graduates in the school orchestra rehearsals and concerts has a far reaching effect in binding the school, homes and community together. Musical memory contests popularize and increase interest in music; and the schools can start the movement. Festivals and music contests create tremendous interest and consequent local support of the musical organizations competing. The school music supervisor or teacher can be the leading spirit in all of these movements and can rest assured that he will receive something greater than mere pay, because he is ministering in art, and a reaction of his community to things beautiful really is a living and objective demonstration of a spiritual devotion of the highest kind.

Another "Nightingale" Story

TUDE:
owing is from an old book of trav- rge William Curtis. Recording a enton Falls, New York, he says: ioteer was a fine boy of sixteen. d along over the plank road and horses, the people, and the places He was sharp-eyed and clear bright boy who may one day be

Have You Faith in Yourself?

Have you ever wondered whether or not it would pay you to take up a special course in music and train for something bigger in your work? State Departments of Education recognize schools of high scholastic training. You can earn a Diploma, Degree or Teacher's Certificate through our school, which is issued by the authority of the State of Illinois.

Earnest, ambitious students are invited to send for our catalog and sample lessons. We send them without any obligation and they show how it is possible to get accredited courses without having to go away from home for an expensive course.

We have been offering our courses to music lovers through THE ETUDE columns for many years. If you haven't sent for literature before DO IT NOW! Check on the coupon below what particular course you wish to see and we will send sample lessons and quote special terms to you.

If you want to advance in your music, get full details now of the courses which have started others on the road to success. There can be no *question* about its paying when so many thousands of musicians are advancing through the aid of our courses to positions of responsibility and influence.

A Public School Music graduate writes:

"I am now the director of the Community High School Orchestra, having received my certificate from our superintendent upon the recommendation of the State Board after presenting my credits received through my studies with your institution."

Piano Students' Course by William H. Sherwood.

Normal Piano Course For Teachers, By William H. Sherwood

Harmony By Adolph Rosenbecker and Dr. Daniel Protheroe. This course includes Counterpoint, Composition and Orchestration.

The Organist's Etude

Edited by Well-Known Specialists

It is the Aim of THE ETUDE to make this Organ Department "An Organist's Etude Complete in Itself"

Artistic and Inartistic Performers

IT HAS been said that performers upon the "King of Instruments" can be classed under two headings, "Organists and those who play the organ." The former are usually people of experience and high artistic aims, while the others include the inexperienced and those whose artistic instincts are of a low standard, either from lack of ability, or opportunities for study with teachers of merit. The remarks, therefore, that will be made, while possibly being of general interest, will perhaps be of greater assistance to "those who play the organ."

The present day organs have so many of their pipes placed in a swell box that the correct use of the swell pedal is one of the ways by which a really good performer is known.

The Swell Pumper

HOW MANY of us have not come across the man on the stool who thinks that the swell pedal is a convenient vehicle for the exercise of his right foot, and who treats his listeners to a continual pumping of the swell shutters?

The late Sir John Stainer puts on record the case of an indifferent performer who presided at an organ of which the swell shutters were plainly visible, and who continued his pumping even when playing on the choir organ *which was unenclosed.*

The first point to notice with regard to the correct use of the swell pedal is the fact that the first opening of an inch or so produces the greatest crescendo. This therefore should be made slowly and afterwards the speed of opening should be accelerated considerably, due to the fact that the crescendo then is not so great. The reverse method should of course be employed with the decrescendo, that is, a swift closing of the shutters until the last two or three inches, after which time the shutter should be allowed to close slowly.

Adding or Withdrawing Stops

THERE is another point, however, of great importance, and that is, the treatment of the swell pedal when a stop of considerable power is either added or withdrawn. Let us take a case to illustrate this, for which purpose we will assume that the swell organ is not a large one, and consists of, say, three or four 8 ft. stops, one each of 4 ft. and 2 ft. and a fairly powerful reed. Now the difference in power between the full swell without this reed, and with it, will be considerable.

Should we therefore desire to increase *gradually* the power, when this reed is added; the best plan is to open the swell box somewhat *before* adding the said reed stop, and just at the moment it is drawn to close the swell box again. By this method the crescendo will be more gradual. The reverse process should of course be adopted when a decrescendo is desired; for at the exact moment when the reed stop is pushed in, the swell shutters should be opened, thus enabling the graduation of tone to be more artistically managed. Naturally if a sudden contrast is desired, the above method would not apply.

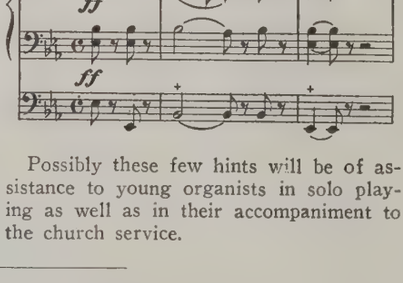
Changing from Swell to Great or Vice Versa

ANOTHER instance might be given, say, when the great organ diapasons coupled with the swell including the aforementioned reed is in use. Should the performer then be playing on the swell organ and desire a crescendo by utilizing the great organ keyboard, the best plan would be to open the swell box somewhat, and at the moment the hands fall on the great organ to close the swell shutters rapidly. As in the former instance, the crescendo is made more artistically by this method and the reverse process will also apply. In fact, whenever a stop of great difference in power is either added or withdrawn, this method should be adopted.

Advantage should be taken (especially in the case of small swell organs) of the difference in power to be obtained by holding or fixing the swell box open at certain points such as one-third or two-thirds of its full extent. Many players omit to take advantage of this, for they either use the swell pedal for a crescendo or diminuendo, or they fix it fully open.

The Organ Crescendo and Diminuendo

By Henry Hackett, F. R. C. O.



Organ Accent When Swell Box is Fixed Open

IN ADDITION to the recommendations already enumerated, there is a further one, which is that of accenting a chord in cases where the swell is already fixed open, or when the feet are otherwise occupied and unable to attend to the swell pedal. This is frequently called for in organ solo playing and refers particularly to writings of the older composers. The chord previous to the one requiring an accent should be slightly detached, and the accented chord be slurred on to the following chord, which latter should also be somewhat shortened.

Perhaps Guilmant, the eminent French organist and composer, and W. T. Best (who occupied a similar position in England) were among the first to recognize this; and they carefully indicated such effects in their compositions. Older composers, however (who wrote at a time when the organ was not considered so much a solo instrument as it is today), did not indicate such marks of expression as do writers of the present day; but skilled performers realize this and play with greater variety of touch than the printed copy often indicates.

The following short extract provides an excellent example produced by accent, and leads the listener to assume that the marked passages are actually given more power, even when no additional stops are added or the swell pedal utilized.

Marche Triomphale, Guilmant

Possibly these few hints will be of assistance to young organists in solo playing as well as in their accompaniment to the church service.

For the Movie Organist

By Alanson Weller

IN SELECTING themes for the film try to study the emotions and general atmosphere of the scenes which you are about to accompany and select pieces which fit these moods. This is the real secret of successful picture playing. For example, an intensely dramatic emotional climax might be appropriately accompanied by the *Andante Cantabile* from the "Fifth Symphony" of Tschaikowsky judiciously cut so as to have the tremendous climax of the music fall in with that of the film. Likewise a rather sentimental scene might be shown to the strains of the Nevin "Love Song" or even the "Liebestraume" of Liszt. For scenes of sorrow or loneliness the popular and decidedly elegiac "Andantino" of Lemare will do very well. A hurried, agitated movement is needed for "exciting" portions. Numbers like the "Egmont" and "Prometheus" overtures are excellent for this type of scene.

In every picture there are portions which, while they serve to advance the action of the plot, do not express any definite emotion, and consequently do not require emotional music. Do not waste big dramatic numbers on these places. They are known as "neutral scenes," and a little neutral improvisation or a short piece such as the "Cantilene" (Salome) or some of the short numbers published in the ETUDE will fill the bill nicely.

Vary the registration frequently, not necessarily with each change of music, as this is unnecessary, but often enough to avoid monotony. Certain emotions are best suggested by certain stop combinations. If the pieces used are organ compositions, they will have a set registration; but, if (as is often necessary) piano pieces or orchestrations are used, the player must make his own combinations. Since every player has different ideas as to which stops best suggest certain emotions, it is useless to give fixed rules. Here one's own resourcefulness and originality must be the guides.

Orchestrations can be very effectively used in this work. Buy the piano part of the "small orchestra" arrangements. In most small combinations the pianist is also conductor, hence the piano-conductor part contains in addition to the piano accompaniment the melody on a staff above the accompaniment. By playing this melody on one manual, with the stops drawn which correspond as nearly as possible to the instruments which would be used in the orchestra (these are also indicated in these arrangements), and supplying a portion of the accompaniment on another manual with a rather soft neutral registration, a very fair result can be obtained. Among these arrangements are a number of excellent overtures. One should always keep a supply of these on hand, as they serve a great variety of purposes.

Avoid playing too loud or

selves on the next occasion is stup
deavor to raise the tastes of thos
you at all times, but be reasonable

verse ground where your hearers ollow, the cause of music is not d. It is not necessary to play " or musical claptrap of any kind to interest quite large numbers general public; they respond won- to really good music which they ow and understand.

ot adopt as your pattern the supe- son who proudly states that he ractices his voluntaries, but just at he feels inclined to play at the This is a sure sign of incom- or decadence. Good organists pre- ir recitals and voluntaries, and it taken as a general rule that "the illful the player the more con- s the practice."

ot refrain from playing music as become popular through repeti- it is really good music. It is to deny audiences music for ey long, if the only fault of the that it has become "popular."

Do not play any composition which is unworthy of the instrument, the building, or yourself; but avoid the mischievous tendency to judge by "titles." A fugue, a chorale prelude or sonata may be strikingly bad music, or indeed not music at all, whereas a weak title may conceal an excellent composition. Choose your music by its quality and not by the title or form.

Forms of composition which are difficult to understand, such as chorale preludes, should not be given in large doses, unless some explanation, either verbal or printed, is supplied to the listener.

Occasional technical inaccuracies are pardonable, but faulty rhythm and stodginess are unpardonable. Organ playing should always be musical in the best sense. The interpretative aspect of music must be carefully studied. Musical interpretations are as essential in organ music as they are in vocal music or in other forms of instrumental music.

—*Musical Opinion*

Choir Helps

By Fred R. Stecker

ler to have a successful choir, in- ust be present at all times.

st be expected that a chorus choir n entirely different basis than a of which the members in most e paid.

that one of my great helps has keeping of each member busy. an organized choir, hold our reg- nthly business meetings, also one ent each month. Such members ot able to do solo work, either et, or quartet, I find it very good in charge of the social event which ke place in the present month. ember may assist along with the ocial staff, while others may work th the membership staff. Before a can be taken in as a regular he or she must be present at oir rehearsals and one business

found that if a person is willing out for a month to see what we an learn in that time if this party out through the many hardships re.

not go through the same routine each night at rehearsal, thereby varying the work as much as possible. Sometimes we take our anthems for the following Sunday first, then the new anthems, and then hymns; then, again, we alternate. A good plan is to have all solo parts left out of an anthem until the final rehearsal of it.

If there is a member in the choir that can play the piano, it is well to let that person go over parts of solos, or any tricky passages, with members having these for the following week, thereby giving them an early start.

We, have an average attendance of twenty members, and out of these there are only five that do chorus work only; so, in order to make the most of our time, it is necessary to have another pianist besides myself, as organist, to rehearse the different parts which I give out from time to time.

A good plan is to have the rehearsal begin promptly and end the same, leaving the balance of time to be spent on extra work. Thus we not only keep up the interest in our choir, but also maintain a helpful, live organization in the church.

How to Play Over Hymn Tunes

My copy of the January *Musica.* vas prematurely removed by an ultra- housemaid. I remember, however, letter which explained that the rea- playing over the tune were two; to let e know what the tune was, and to n time to find their places. The seem to remember, generally played and told us how to do it. His ideas good; but really they are not in it t I do.

mber, in my young days, when I had with only two stops (an open dia- l a stopped diapason), I used to play es of the tune, if it had as many as lf it had less, I played only the first d the congregation never knew what was and never found their places at played the first line on one of the shed it in, and pulled out the other econd line, reversing the process for , so that one always left off on the began on. I hope this is clear. It good, but I was told by some people little or no taste that some of the ion were sorry they ever did find es. I expect this was on account of s: the vicar chose them, and some ere very poor.

gel voices ever singing;" well, of ere's only one possible stop to use: there's nothing clever about that. My specialty is in the *"ever* singing;" and even though they get tired and may have found lots and lots of places, the proper atmosphere is got. "Brief Life," I finish quite suddenly, when nobody's expecting it. It gives them a jolt, I can tell you; but it explains the meaning of the hymn.

In "Our day of praise is done," I play over the whole tune on the full organ; and that just about ends it for me, for when they begin to sing I always stop at the end of the first line. If they want to go and perjure themselves, they can: but I won't. In summer time I simply refuse to play, "The day thou gavest, Lord, is ended" until 10.30 p. m. I remember one time, when the vicar's sermon made me think that that hour had been reached. I played the tune; but I have been more wary since.

I love my voluntaries after evensong. One evensong a man stayed to listen. I had just finished the Fantasia I myself had written on "The Monastery Garden" when I noticed him. I went up to him and shook him, but he did not wake. The vicar (I got my literary style from him, though he is not much good otherwise) told me that, in the language of past days, this man would have been called a "three-bottle man." Still, it was rather nice to have him there. HESPERIDES HOTBATH.

The Child's Approach to Music Study

To win the enthusiastic interest of the boy or girl at the very outset has always been one of the biggest problems in music teaching. Leading educators agree, today, that this can be best accomplished by enabling the youngsters to *make music in their own way* with the aid of that universal musical instrument—the Harmonica. After they have become proficient on this instrument they will take naturally and enthusiastically to the study of the piano, violin and other musical instruments.

A Hohner Harmonica for the boy or girl will help solve the problem. With the newly perfected Chromatic Harmonica they can play the complete chromatic scale. It is not a toy, but a real musical instrument which will promote self-expression, rhythm, and accuracy, and lay the foundation for serious musicianship.

Hohner Harmonicas are endorsed by such prominent group educators as—

Peter W. Dykema, Prof. School Music, Columbia University, New York.
Dorothy Enderis, Ass't Supt., Milwaukee Schools.
W. A. Gore, Supt. Schools, Webster Grove, Mo.
Nellie C. Hudd, Principal Mozart School, Chicago.
Harry Keeler, Principal, Lindblom High School, Chicago, Illinois.
Edward Randall Maguire, Principal Junior High School 61, N. Y. C.
W. H. Wheeler, Principal, Alton Community High School, Alton, Illinois.

—AND MANY OTHERS—

FREE BOOK OF INSTRUCTION

This interesting and helpful booklet comprises 16 pages of simple instruction illustrated with charts and pictures, and includes six popular musical selections arranged for harmonica and piano. Copies in any quantity will be supplied upon request.

THEATRE ORGANIST'S SECRETS

EVERY PROGRESSIVE ORGANIST should have this complete course in trick and imitation playing. Contains detailed instruction for producing Dog-bark, Snore, Rooster-Crow, R. R. Train, Bagpipes, Banjo and over twenty other effects indispensable to the motion-picture organist.
Price Two Dollars, postage prepaid
C. ROY CARTER, Organist
P. O. Box 97, Sta. C, Los Angeles, Cal.

Organ and Choir Questions Answered

By Henry S. Fry

President of the National Association of Organists, Dean of the Pennsylvania Chapter of the A. G. O.

Q. Will you kindly tell me in "The Etude" of what the proper care of a pipe organ consists? For instance, should the swell shutters be left open or closed while organ is not being used? I do not mean the tuning and service given by a tuner, but the care of the organ by the organist using the instrument continually.

A. As a rule the swell shutters should be left open when the organ is not in use, so that the temperature of the swell box may be as near that of the unenclosed section of the organ as possible. Outside of keeping the organ locked (if necessary to protect it from misuse) and turning off motor, the keeping of swell shutters open is practically the only care that is necessary on the part of the organist, where a tuner is regularly employed to keep the instrument in good condition.

Q. I want to make use of the "descant" method of congregational singing. As I understand it the congregation is led in singing the hymns by a choir; at the same time a chorus of sopranos sings an independent air. Is this correct? If so, where can I get the music for this latter part?

A. Descant hymn tunes may be used in the way you mention and we would suggest that you secure the "Descant Hymn Tune Book," by Geoffrey Shaw, published by the H. W. Gray Co. In an examination of two hymns from this collection, the Editor was impressed with the thought that the arrangement might be more effective if the descant melody did not appear in the organ accompaniment, and he suggests your trying it that way—leaving the descant melody to be heard only from the voices.

Q. In Cesar Frank's "Grande Piece Symphonique" how fast should the first "Andante Serioso" be played—according to metronome about 50 ♩ ?

A. Tempos vary somewhat according to the size and acoustics of the auditorium—for instance the *Toccata* from Widor's "Fifth Symphony" is marked ♩ =118 while the composer is said (by a distinguished Philadelphia organist and former pupil of Widor) to play it at the rate of ♩ = 76 to 80 in his own church, Saint Suplice, Paris. Large resonant auditoriums permit of a slower tempo being used than that employed in a smaller room of less vibrant quality. In the writer's church, which has excellent acoustic properties—being rather resonant a tempo of ♩ = 52 seems effective for the *Andante Serioso* movement you mention. The speed might perhaps be slightly increased in a small church with little or no resonance.

Q. I would appreciate it if you could give me the name of some book which gives comprehensive, helpful information which will enable a pianist who knows nothing about the reed organ to play this instrument, or at least acquire a fairly complete knowledge of how to go about it.

A. We would suggest "Melodious Easy Studies for Reed Organ" (4 volumes), Landon.

Q. Will you tell me a list of summer schools for Organists in New York City?

A. We believe Columbia University, New York City, has a summer course which includes Organ. You might also inquire from the following in reference to the matter:

New York School of Music and Arts, 824 West End Avenue, New York City; American Institute of Applied Music, 212 W. 59th Street, New York City; Guilmant Organ School, 17 E. 11th Street, New York City.

Q. As a constant reader of THE ETUDE, *and your department I am taking the liberty of writing you for a little advice. I have recently been appointed Choir Director of a Methodist Church, and, in organizing the Choir, I am confronted with the following situation. I find that we will have plenty of female voices that are fairly well trained but am unable to obtain the required number of male voices. As yet I have been unable to get but two male voices that can sing the parts, tenor and bass. I also find that there are plenty of men who would like to sing but cannot sing the parts given them (they being used to singing in unison with the sopranos).*

My musical education was obtained upon the violoncello, and I have a very fair knowledge of harmony. I have had no vocal training other than learning to sing baritone in a choir. Do you think that, with the proper instruction books, I could teach a class of men in learning to sing tenor and bass? Any advice you can give me as to the names of instruction books to buy, methods and so forth, will be gratefully appreciated.

A. The Editor sees no reason why you should not sucessfully instruct a class of men in learning to sing the tenor and bass parts. I would suggest that you secure copies of either of the following books: "Methodical Sight Singing," Root, and "The Student's Manual of Sight Singing," Whelpton, and proceed to teach them along the lines suggested. It might be well at first to have them sing the melodies of a few hymns, naming the notes, *do, re, mi,* and so forth, until they become familiar with the intervals. After they are proficient in singing the melodies in this way, have them try to sing the tenor and bass parts in a similar manner.

Of course you may find a few who will have difficulty, but they are likely to be a minority. If you can persuade the two men who can sing parts to attend the class, they can be of much help to you in your work. Your training in harmony should be an aid to you, and the 'cello training should serve to make your sense of pitch accurate, as the player of a stringed instrument, unlike the pianist, must correct the intonation.

Q. Your organ and choir questions department has proven very beneficial to me as it no doubt has to others, but there are two or three questions that concern me more than some of those already published, and I am going to take the privilege of asking them.

I have been studying the organ for some time, and I find that a knowledge of harmony is very desirable, if not absolutely essential. However, I have not the time to put on it that would be required in a correspondence course such as that suggested by you in an earlier edition of THE ETUDE. *What would you advise me to do? Are there any books that could be used for study at home? If so, what ones might best be used?*

2. In Audsley's "Organ Stops," he speaks of pipes being blown or voiced on a wind of ¼", 5", 7", and so forth. Is this pressure measured in inches of water or mercury?

3. In the same book, when speaking of Mixtures, Dulciana, Cornet, or other compound stops, a chart, such as the following, is sometimes given:

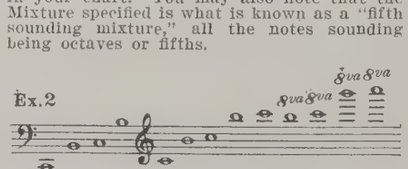
MIXTURE—V RANKS

Ranks.	I	II	III	IV	V
Break 1. CC to BB...	19	22	26	29	33
Break 2. C to B ...	15	19	22	26	29
Break 3. c' to b' ...	12	15	19	22	26
Break 4. c'' to b''...	8	12	15	19	22
Break 5. c''' to c'''...	1	8	12	15	19

Will you please explain the meaning of the figures in the chart? Are they the relative length of the pipes or of the tones, or have they no connection with either?

A. 1. Any course in harmony could of course be studied at home, though some text books might be more readily understood without the aid of a teacher. We would suggest the following, from which you might make a choice.

Harmony Book for Beginners..Vol. 1..*Orem*
Theory and Composition.....Vol. 2..*Orem*
Student's Harmony (with key)..*Mansfield*



2. The wind pressure for organ pipes is usually found by using a pressure gauge or Manometer into which water is poured. Admission of air to the gauge forces the water up the tube, and the difference between the level of the two surfaces of water is measured in inches, the result indicating the wind pressure. The following illustration of a gauge appears in the Stainer and Barrett Dictionary, although gauges of a different type are now used:

The liquid employed may be water or mercury, but if the latter is used the reading in inches must be multiplied by 13.6, as mercury is 13.6 times the weight of water. Water is most commonly used for convenience and accuracy.

3. The following chart will serve to show you the points at which the indicated Mixture breaks, as well as the pitch of the pipes actually sounding, which is indicated by the figures in the chart you quote. This chart is also reproduced below with the names of the notes substituted for the figures quoted in your chart. You may also note that the Mixture specified is what is known as a "fifth sounding mixture," all the notes sounding being octaves or fifths.

Ex.2

MIXTURE—V RANKS

Ranks.	I	II	III	IV	V
Break 1. CC to BB..	G1	C2	G2	C3	G3
Break 2. C to B ..	C2	G2	C3	G3	C4

Self-Help in Music Study

By Richard Kountz

(Continued from Page 499)

everything else. Nothing could be from the truth.

not only true that a man is great ine of activity as much on account eneral knowledge as on account of nical equipment, but it is also true e more towering his figure is in field, the more widespread and, at e time, accurate, will be found his lge of general subjects. He may, ıe, be reticent in expressing him- natters other than those with which rofessionally associated, but this found largely the result of his for the probably greater knowledge those whose work lies with specific ınder discussion.

example, a successful symphony a leader not only must have the ıte skill of his craft at hand but, ion, he must also have a profound ge of human nature and the ability le and direct men, a vast knowl- f the musical literature of the an understanding of society and ıstoms. He must be, in some di- ıt least, a diplomat, a social figure, cal expert and a figure transmit- ıfidence in his orchestra and his . He occupies a position that re- f him knowledge whose tentacles many a remote place. And yet ion is such, due to his contact with ing figures in other fields of en- as frequently to inculcate in him g of modesty in expressing an regarding extraneous matters; ı, at the same time, he may be miliar with them.

Another Superstition

The second superstition to go under the axe is the belief, fondly cherished, especially by the immature, that originality should be the *immediate* objective of one's artistic efforts. It is due to this perverse delusions that many of the grotesqueries of the art world come into existence (generally a perishable one). The absurd knick-knacks constantly evolved by many so-called artists originate in this weird belief.

Originality is nothing more than the natural outgrowth of a personality rooted in solid knowledge and nourished with care and technical skill. I mean, of course, originality that is to prove of any value to either the possessor of it or the world in general. The complaint against much of our modern art is not that it is so original (it isn't) but that it is pitiful. Such originality, if any, to which it may lay claim is so weak, so unsupported as to inspire dismay at its being set out before the public in such condition.

It is not the business of students to be original. It is their business to absorb the old. If there is any originality of value in them it will manifest itself as the years go by. If there is not, there is no use in their trying to fake it.

Self-help, then, proves itself to be nothing more than slow, painstaking, accurate and constant efforts to acquire as much already established knowledge and skill as possible. Its economic value is indisputable. It is the meat upon which artistic results are nourished. It is a self-acquired faculty. It is, in fact, a necessity with which none of us can dispense and still survive in either the world of music or the world in general.

Is Your Metronome Dusty?

By Ethel M. Stevens

ıd not our teachers be criticized ecting to use the metronome and ng it stand covered with dust? time and rhythm so accurate with ls that the metronome can be dis-

Indeed, this is not the case. The me should be employed daily to e careless pupil along the right accurate musicianship.

ly a pupil came with apparently howledge of time, after having studied three years. When shown the use of the metronome a surprised and startled look came to his eyes, and he exclaimed, "I never knew before that that thing was used for beating time! I supposed it was the teacher's bank where she kept her money!"

Should not our teachers wake up to the fact not only that metronomes are essential in the studios, but also that their service is beneficial?

Musical Punctuation Marks

By Charles Knetzger

ARE there so many different kinds s around the notes," said Grace to her. "I think it makes music so

ıt all," said her teacher; "they are to help the player."

ntelligent reading of a paragraph e very difficult if there were no commas, colons, semicolons, and So also the proper interpretation c is not an easy matter if the punctuation marks are missing or ly placed.

of these marks has a distinct per- and a definite meaning. The slur says: "Lift your rom the keys just long enough to e legato. Take a breath, and go

se over a note or rest says: ere a moment before going fur-

st says: "Be sure that you w many beats to give me, and do l the key down while you are ."

The tie is a sign of partnership. Two or more notes have become wedded and are considered as one.

Accent marks ^ > give notice that something very important is being said. They are the musical exclamation marks, and strongly object to being slighted.

Crescendo marks say: "Please begin softly and get gradually louder."

Diminuendo marks say: "Play gradually more softly."

The notes under a slur say: "We belong together. Please do not separate us."

These little staccato notes say: "For goodness sake, take your fingers off the keys! We are red hot!"

What an improvement there would be in the playing of little girls and boys if they knew the meaning of all these marks, and observed them carefully!

School for the Training of

THEATRE ORGANISTS

Direction of CHARLES H. DEMOREST, Famous Theatre Organist

FALL TERM OPENS SEPTEMBER 13th

Students have lessons and practice before the Screen provided by the College in its studios. New two and three manual Wurlitzer theatre organs for lessons and practice, owned and operated by the College.

COURSE OF STUDY

A two year course. Varied to suit the individual student.

FIRST YEAR

First Term: First working registration, arranging of popular ballads, semi-classic ballads. Themes for feature films.

Second Term: Preparation for news reel playing, arrangement of piano numbers for the organ, waltzes and marches. Characteristic numbers arranged.

Third Term: First studies in adapting orchestrations to the organ, first studies in jazz playing, second or double-touch, playing of song-slides. Comedy film.

Fourth Term: First actual screen work, the news reel, comedy film, classification and construction for feature films, cuing short and long feature film, thorough preparation in adapting music.

SECOND YEAR

First Term: Repertoire, transcriptions of violin and orchestral music, orchestral overtures adapted, first actual screen work in playing the feature film, scenics, cartoons, travelogues, etc.

Second Term: Modulation and improvisation for all types of films, memorizing for important situations, dramatic music such as misteriosos, furiosos, etc. Actual dramatization of all kinds of films, meeting actual conditions of the theatre, improvisation including waltzes, marches, intermezzos, jazz, melody work.

Third Term: All scenic effects such as storms, falls, thunder, trains, etc. Constant practice before screen.

Fourth Term: Devoted entirely to screen work by those who have followed the complete course, and opportunity will be given to play before invited audience, so that practical experience may be gained fitting the organist for public work.

LENGTH OF COURSE

The time which will be consumed in covering the course will be determined to a large extent upon the ability as organists of those who take it. Students who never have studied organ previously will require two full years to finish the course. Experienced organists may cover it in one year.

NOTE—*Church and concert organists of experience are eligible to enter the Advanced Course.*

FREE FELLOWSHIP

Mr. Demorest has consented to award a Free Fellowship of two lessons weekly, each of thirty minutes, to the student who, after an open Competitive examination, is found to possess the greatest gift for playing theatre organ. Free Fellowship application blanks on request.

uestion and Answer Department

Conducted by

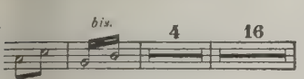
RTHUR DE GUICHARD

'edal in Technical Studies.

y I use the pedal when practicing ical studies?—B. Klein, Brooklyn,

ver use the damper pedal (commed the loud pedal) when pracger exercises, scales, chromatics, ar- nd changing chords; otherwise, use indicated by the music.

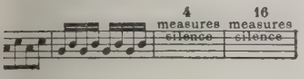
Passage, or Pedal Point.



ase explain what a Pedal Passage hould it be played?—O. A. M., Lin-

pedal passage is one having a susnic or dominant in the bass, somehow, the harmony of the upper parts ndependently. This pedal part is pedal point? The upper parts begin vith the harmony of the pedal note. of the independent upper parts is ch is directly above the pedal bass.

ns and Abbreviations.



ll you please tell me the meanings owing musical signs? How are they terpreted?—Frances B., St. Louis,

ey are played thus:

rd *bis* (Latin, twice) signifies that ire or measures over which it is st be played twice.

y—Melody—Counterpoint.

at is the real difference between and melody? Is it wrong to say, ying that song her harmony enthe audience?" Does counterpoint her of these?—Reader, Toledo, O.

elody is a succession of single notes. s a simultaneous combination of two different notes. Counterpoint is a n of two or more melodies written to certain strict rules—The quotaore, is in error.

n in Composition.

ase explain what is meant by "imi- a musical composition. Does it the repetition of the original tune another key?—Pianist, Jenkintown,

t is one form, the simplest. Apply to any group of notes, repeat the the same order upon consecutive the scale and you have the most form of imitation. Then invert the hich has now become a "figure"), side down; reproduce it in different ifferent parts or voices; increase or he length of the notes of the figure ir original figure is a good one, you t a really good piece of music by r of imitation. A very good examnalysis, is the song *Les Morts,* by

ntor of the Nocturne.

was the first composer to introform known as "Nocturne?" Was pin?—O. F., New Bedford, Mass.

pin wrote some very beautiful speche Nocturne, and gave it its most form, but he did not introduce it. an, of the name of John Field, was r. He was born in Dublin, in 1782, his début as a solo pianist, in 1792, of ten. His graceful compositions orth studying.

iple and Triple.

y should there be duple and triple hat is, what do they really mean? tell them from the time-signature?

What kind of time is 6-4?—L. J., Wollaston, Mass.

A. Time is arranged as duple and triple to mark the recurring accent, or stress, by twos, or by threes. It is a simple matter to tell, by the time-signature, whether the time be duple or triple. Common time is duple, the accents occurring on the first and third beats. When the time is indicated by a fraction, 2 3 4 6 9

4, 4, 2, 8, 8, if the upper number (the numerator) is divisible by 2 it is duple time, if *by three only* it is triple time. Therefore 6-4 time is duple time, or two dotted half-notes to a measure.

An Instrument named a "Nay."

Q. Was there such an instrument as a "Nay?"—L. Foley, Providence, R. I.

A. The Nay is an Egyptian flute.

Voice that is "Chiffee."

Q. Have you ever heard of a voice that is "chiffee?" I have been told that my voice "se chiffe." What does it mean? I know all about "nasal" and "throaty" and "tight" and "breathy;" but "chiffee" gets me! What is it?—Singer, Pittsburgh, Pa.

A. A voice is said to be *"chiffee,"* or that the voice *"se chiffee,"* when the tone, at first firm, dwindles away rapidly to nothing, without resonance, similar to the edge of a piece of cloth or cotton which, when pulled, ravels out. A ragged voice of no consistence.

Neumes.

Q. What are Neumes?—Sister Placida, St. Paul, Minn.

A. Neumes formed a system of notation, or pitch of notes, from the end of the fourth to the twelfth centuries. They were not notes as we now understand them, for no stave existed; they were probably accent marks, placed over syllables, and consisted of dots, dashes and other hieroglyphics. The Neumes were gradually developed into notes.

Diatonic and Chromatic.

Q. What is the meaning of Diatonic? and of Chromatic?—A. C., Mount Vernon, N. Y.

A. Diatonic (Greek, *diatonikos*) is the term applied to any note, scale, series of notes or chords belonging *to one key only,* without any alteration. Chromatic notes, or alterations, proceed by semi-tones.

"Consort" and Concert.

Q. What is the meaning, in music, of the word "consort," which I have seen on some old music? I can imagine its meaning, but would like your authority to make me sure.—E. E. E., Providence, R. I.

A. "Consort," a fellow, companion, mate, partner. The word may often be found so spelled in the works of old authors for the word "concert;" but it was wrongly spelled. Nevertheless, some analogy may be discovered in the two words when it is remembered that a "concert" is made up of companions and partners who are met together for the performance of music, either as players or auditors. "Consort," in this connection, is no longer used.

What Is a Fret?

Q. What is understood, in music, by the word "fret?" I saw recently in a book some reference to "the frets of the violin," which I do not understand.—Student, Buffalo, N. Y.

A. Frets are thin strips of ebony, metal, or ivory, or any other substance, inlaid or placed across the fingerboard at right angles to the strings, thus indicating the positions of successive semitones. The fret is not used on the violin, viola, or violoncello; but it is still to be found on the mandoline, guitar, banjo and similar instruments. The fret was most probably used first for the fingering of lutes, which had a number of strings. That the word was very generally known and employed, we can gather from Shakespeare's *Hamlet,* where we read (Act III, Scene 2): "Though you can fret me, you cannot play upon me."

Position at the Piano.

Q. Should I sit low, or rather high at the piano? What is the best position, and should it always be the same?—Bertha Cole, Chicago, Ill.

A. For choice, sit low rather than high. Sitting high is injurious to finger technic, since it gives more work to the shoulders and arms; and what you require is flexible finger-dexterity, without arm or shoulder action. Try your seat at different heights until you find the position which allows you to play a long time without fatigue. Have also your feet within striking distance of the pedals. Having found the best position for yourself and your playing, keep it always; if not, you may find your playing uncertain, because "out of position."

CHICAGO MUSICAL COLLEGE

61st Year

HERBERT WITHERSPOON, President

FALL TERM OPENS SEPTEMBER 13

More than 125 teachers of world-wide reputation. Private lessons only or courses leading to Teachers' Certificates, Graduation and Degrees in Piano, Voice, Violin, Cello, Church Organ, Movie Organ, Theory, Public School Music, Dramatic Art and Expression, Toe, Ballet, Interpretative and Classical Dancing, School of Opera, all Orchestral Instruments, Chautauqua, Lyceum, Concert and Languages

85 FREE FELLOWSHIPS

(Two Private Lessons Weekly) to be awarded to the students who, after an open competitive examination, are found to possess the greatest gift for playing or singing.

PROFESSIONAL DEBUTS, ENGAGEMENTS *and* SITUATIONS

Public debuts will be given artist students in Central Theatre, Chicago, when they are ready to commence their public careers. A special bureau established in the College will assist artist students in obtaining professional engagements. Graduates who have qualified as teachers will be assisted in securing situations without charge to teacher or employer.

The Legato and Its Accomplishments in Changing Strings

By William Kupper

To THE fortunate violin beginner who has heard some great artist play legato passages with the full roundness developed in the skilled right arm, and has felt the human touch in the vibrations of a vanishing note, the significance of finished, unblemished passages in slurred notes makes a well-merited impression. Yet, the beauty of a fine legato is not necessarily restricted to the great genius; the ambitious violinist can acquire the power to an extent depending on the amount, care and substance of practice. The acquisition of right-arm skill involves mainly the basic exercises stressed for all violin playing.

Scales are the simplest examples, or rather subjects for slurred note practicing; and along with this, they are the most important way of acquiring regularity and precision. A hammer-like motion, analogous to that of the piano hammers, should be practiced "into" the fingers. Playing scales first in detached notes, and then in ascending combinations, with the utmost regularity, deliberation, and precise intervals of length, can produce the desired results. Applying the principle, when runs or cadenzas are to be played, each note should be bowed in prescribed style, and then followed by slurred groups of two, four and so on. But the underlying precept of all intricate playing, slowness in practicing, should constantly be kept in mind.

However, the beginner will find one great difficulty in his way; a limpid, flawless tone seems impossible in changing strings. The solution—a most useful one—makes pureness possible, and adds decidedly to the appearance of the right arm in the way of grace. Students of Professor Leopold Auer are distinguished for their dexterity and finesse in changing strings. The principle can be explained thus:

The wrist, that extremely useful part of the human anatomy, plays the benefactor in this difficulty as in many others confronting the violinist. However, its use towards this particular obstacle is restricted to transition from left to right strings, that is, from the G to the E. In its normal position the wrist should bend in a graceful arch. When a string is to be traversed, especially on the down bow, the curve should be reversed so that the top of the wrist should form the inside right angle of an imaginary right triangle. Of course, the moving of the wrist should be accomplished gradually. After the neighboring string has been reached, the wrist should resume its normal playing position. Clean slurred bow-playing is much more difficult than detached note transition, but can be worked into the right arm by practice. This principle cannot be applied to reverse changing, that is, shifting from an E to a G string direction. Here, wrist movement without embellishment should be used.

Exercises of this kind can always be found in such standard collections of etudes as those of Kreutzer, Mazas, Hermann and Wolfhart.

"When Thoreau delivered his famous assertion that all genius is essentially feminine in quality, he stated in terse fashion the truth which is apparent to all analytical observers, namely, that genius, and particularly literary genius, usually betrays the quick intuition, the delicacy of fancy, the extreme sensitiveness and the warm sympathy which are the traditional attributes of high-minded womanhood."—HARRY COLIN THORPE *in The Musical Quarterly.*

The Violinist's Etude

Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

The Foundation of Violin Technic

By Max Bendix

THERE are numerous points in the development of technical facility on the violin on which pedagogs disagree, but there is one to which there is no dissenting voice, that is:

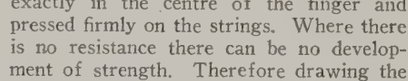
Slow Practice

I have never heard of a violin teacher who did not impress this adage persistently and firmly on the minds of his pupils, but, unfortunately, many of them neglect to impart the most important and salient reasons for studying at a slow tempo.

"You must learn to walk before you can run," is one of the stock phrases used by teachers. It has merit and is clearly understood by students. Slow practice, in itself, means nothing and will bring no beneficial results unless the position of the hand and application of the fingers are absolutely correct.

The hand must be so trained as to enable the student to place his fingers on any given note, in any position on the violin, with reasonable assurance that it will be perfectly in tune, without hearing it sounded. This requires years of patient study but the reward justifies the time devoted to acquiring this certainty.

Perfect intonation can be acquired only by slow practice and careful attention to the position of the hand and correct application of the fingers.



The ear should be used as a corrective medium and not as a guide, for the simple reason that, after the student has heard the tones he is playing and has played them out of tune, it is too late to rectify the fault as he is allowed only one trial. Therefore he will realize the absolute necessity of training the fingers to fall in the correct place without hearing the tone produced.

The foundation of technic is:

Scales

These should be practiced slowly. The four fingers should be held directly over the tones that are to be played, applied exactly in the centre of the finger and pressed firmly on the strings. Where there is no resistance there can be no development of strength. Therefore drawing the fingers back and slapping them on the strings has no value. The real result in obtaining strength comes from the pressure after the finger is applied; the unnecessary movement through the air is lost motion, energy and time, and will retard all efforts towards velocity. The fewer the movements, the less the exertion, the greater the chance for speed.

I have had very good results in the playing of three octave scales by using a shifting grace note, building three tones with one movement of the hand and fingers, as follows:

Repeat 50 times.

This grace note should be played until the hand is so trained as to be sure of having all three tones in each position perfectly in tune. Then, and only then, shift without sounding the grace note.

In my Scale Studies you will find that all scales, with the exception of G, A and A-flat, are fingered alike so that once you have mastered the shift you can apply it to all the scales, as the shift is relatively the same. When you have mastered this in a slow tempo, having followed these simple rules, it is not difficult to increase gradually the speed. As the greatest benefit of the shift is in playing scales rapidly, be sure to make the shift always in the same manner but without sounding the grace note.

Popularity of the Violin

A CORRESPONDENT writes: "While talking to our local bandmaster a few days ago he suggested that the violin was losing its popularity. He pointed out that the best popular orchestras are not using the violin. I was not well enough posted to argue with him. That is why I am writing for your opinion. Is the violin losing its popularity or is it not?"

It is astonishing that any one who has an opportunity of keeping even measureably up with the times in music should make a statement that the violin is losing its popularity. It is indeed true that the popularity of "jazz" has caused violins to be displaced to a certain extent in orchestras playing dance music in cafes, hotels and restaurants, in favor of saxophones and other instruments to carry the melody. However, this has been made up fifty fold in the increase of the violin as a solo instrument and in various orchestral combinations.

Never in the history of the world have there been as many violins and violin players as at present. All the large cities, and even smaller cities over 40,000 in population have one or more symphony orchestras. Many of them have large orchestras, which, while they may not have complete symphony instrumentation, approach very closely to it. This has made room for thousands of advanced violin players, since the violin is the instrument most largely represented in the symphony orchestra.

A good sized symphony orchestra has twelve first and twelve second violins—twenty-four violins in all—to say nothing of the viola—an instrument closely approaching the violin in technic, which many violinists are able to play. Grand opera orchestras and orchestras used in comic opera, musical comedy and so forth, are made up along the lines of symphony orchestras, as far as the preponderance of violins is concerned. The same might be said of better-class orchestras of any size.

When it comes to public school orchestras, we find the violin the preponderating instrument. Instrumental music in the public schools has become such that nearly every school in the cou an orchestra, or orchestral com in which the violins out-number instruments. In many of these school and Sunday School com we find nothing but violins and pia possibly one or two wind inst In cities of less than one hundr sand population I have heard performances of school orchestra numbered almost three hundred

Violin schools conducted on t system, where for a moderate year's instruction (including a is given, has resulted in swell number of violin pupils to a re degree. A traveling salesman for York music house informs me furnishes as many as one hundre every two months to some of these The price for a violin outfit oft as low as four or five dollars school boards buy hundreds of which are furnished free to schol have none of their own.

The growth in the number of s orchestras, public school violin ins and class system violin schools has in an increase of violin stude violinists in the United States tha of the most remarkable incidents musical history of this or any The small decrease apparent in t ber of violins in use has been wholly in the case of jazz or Legitimate orchestras all have th mal quota of violins or have incre number.

In solo violin playing the same able growth has been noted. An thousands of public school pupils a smattering of violin playing in lic schools and in the class system there will be an ever increasing who will be inspired to learn th thoroughly.

America never does anything by There is little doubt that the enthusiasm for violin playing will country among the foremost in th playing world. This is preëmine age of the violin.

Directing a Brass Ban Orchestra

By Herbert N. Carleton

[EDITOR'S NOTE.—The writer of th ing article objects very strenuousl article which appeared in a former THE ETUDE, which ventured to sug the band conductor should wield b under certain restraint, avoiding un motion of any kind. With the purpo senting all sides of a question, the objections are given as written.]

THE article on this subject in t 1925, number of this magazine nee greatly supplemented and in many ulars revised.

Its author apparently advises t master to reduce his gestures to mum, in order to avoid diverting t tion of the audience from the mus present writer is convinced that t *opposite* is the case. The senses o and hearing are *entirely indepen* each other; and it is a familiar f at the moving pictures the specta simultaneously entertained by the and by the orchestral music, many deriving about equal enjoyment fr

Instead of a bandmaster's gest verting attention away from the they focus attention upon it. Ho director infuse any enthusiasm i audience, or even into his own pla he manifests none of this quality h He should throw his whole person to speak, into the music. onously might as well be replaced by a metronome, such as pupils often use as a guide in practicing. His left hand should be used as much as his right hand, or very nearly so, though usually in a different way. A director who uses the same stereotyped up-and-down beat, whether playing "The Lost Chord" or "Why Did I Kiss That Girl," has not the faintest realization of what true directing is.

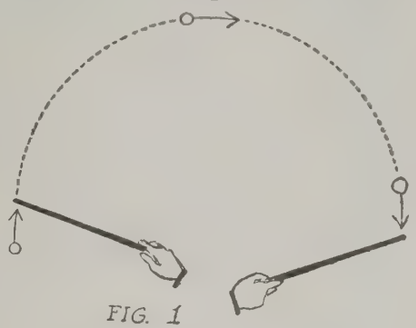

FIG. 1

Another variation is the concave arc, in which the *lowest* point of the arc is similarly arranged.

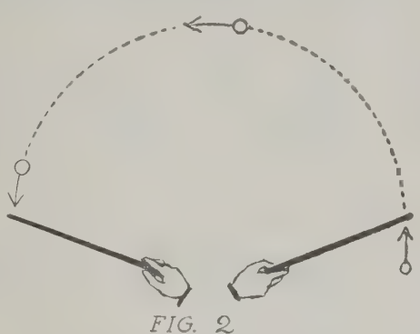

FIG. 2

In romantic passages the director may well throw his head and shoulders slightly forward, as if looking down upon them with absorbed contemplation. When the same or similar passages are repeated, first softly, then much heavier, it is well for him to gaze *upward* while the softer version is being rendered, then throw his head quickly forward as the heavier version starts in.

When plaintive music is punctuated at irregular intervals by sudden outbursts portraying alarm or weird exhiliration, he should *lurch violently forward,* with a broad, enclosing sweep of both arms.

But for marches or any music of a brisk "peppery" character, it is usually preferable to stand as straight as possible, like a military chieftain.

When playing very solemn, majestic music it is well to extend the left arm directly in front, at an angle of about sixty degrees above the horizontal, with the hand wide open and held vertically, palm forward and fingers pointing upward.

In playing for moving pictures, the music should follow instantly every change in the picture. For example, if a man is fighting a forest fire while his daughter is dying at home, these scenes being alternated at intervals of a few moments, the "snappy," delirious music played during the fire scene should change instantaneously to the soft, sad music of the deathbed scene, at the exact moment when the picture changes, even if it is "in the middle of a note," so to speak.

Many unique "quirks" will readily occur to any director who really "feels" the music. For example, in the closing phrases of the *Anvil Chorus* from "Il Trovatore," the few sweet notes preceding the final crashes should be indicated by beats "as light as a feather," in the form of concave arcs, and both hands should be *high up* and *well forward* when the last two crashes are impending. These should be indicated by bringing his left hand down to his side with a sweep of extraordinary vigor for the first crash, and then doing the same with his right hand for the other crash. Of course, the drums should be reinforced by as many anvils as are obtainable.

In intensely brilliant, forcible music, the director can enthuse and inspire his players by promenading in front of them for several steps forward and back.

He should wheel suddenly, when the theme changes from one where the instrumentation consists chiefly of flutes, clarinets and oboes to one where the trombones, helicons and other brasses are most conspicuous (or *vice versa*), facing directly towards those instruments which are momentarily the most prominent.

In very rapid music, the time should be beaten as rapidly as the notes are sounded, instead of only beating for the alternate notes. When playing marches, or any music of a distinctly military character, the vertical beat should predominate, though even then there is a field for considerable variation. In the heaviest and most rapid passages, a motion of the bâton resembling that used in "pounding a mortar with a pestle" is peculiarly appropriate. Any unusually heavy crashes on the drums and cymbals should be signalized by waving the bâton with greatly augmented energy, directly towards the performers on those instruments. Most bands suffer from inadequate equipment To render *fortissimo* music most effectively, there should be at least two snare drums, two pairs of cymbals, a set of three kettle-drums and a very large bass drum. One pair of cymbals should be used "free-hand" for resonant tones; the other pair may be played by the bass drummer, with one cymbal clamped on the drum, for "solid" crashes.

When furious climaxes occur, as in most overtures, such as "Poet and Peasant," and in such operas as "Carmen," the director should advance almost into the centre of his band and flourish his bâton with such tremendous force as to work the players into a frenzy, swinging it over their shoulders with long and powerful sideways, curving, or diagonal strokes, as if he were going to "take their heads off," metaphorically speaking, and fixing his attention especially on the heavy brass horns.

For music of a sentimental or reminiscent character, much of the beating may be in the form of a convex arc, from left to right and *vice versa,* alternately, the bâton reaching the highest point of the arc midway between the accented notes. Observe Figures 1 and 2—or even for only one note in four, as is done by many lazy directors.

In music of a delicious sweetness, permeated with a strain of sadness, a gentle "pulling" motion with both hands, similar to the motion used in "pulling molasses candy," drawing his hands towards himself, as if he were literally "pulling" the dulcet tones out of his players, is particularly appropriate.

If a director limits his activity to mere mechanical time-beating the rendition is sure to be dull, flat and colorless.

Above all, he should forcibly impress upon every member of the band that one instrument is no more "important" than another, that as much depends upon the cymbals as upon the first cornet, and that all the players, instead of keeping their eyes "glued" to the music scores in front of them, should *look at the director* as much as possible, in order that none of the latter's motions may be "wasted."

The Wanamaker Violins

Rodman Wanamaker has bought four Stradivarius violins, "Conte La Chesnaie" (1687), "Dancla" (1710), "Joachim" (1723), and that consumately powerful and resonant violin which is called "The Swan" because it is the last one the master-carver made before he died. It bears the inscription, "In My Ninety-Third Year." Mr. Wanamaker will not use these instruments himself. They will be played in concerts in the auditoriums of Wanamaker Stores in Manhattan and Philadelphia.

Violin Questions Answered

By MR. BRAINE

ns in Harmony.
It is somewnat difficult to an- estion as to the best books to ry, Harmony, Composition, and ause your letter fails to state ate of advancement of the pupil, he is studying for the profes- are hundreds of works on all anches of music. If the pupil ed, the "First Lessons in Har- eston Ware Orem (Theo. Pres- ladelphia) would no doubt be

up" to Work.
nout hearing you play, it would difficult for me to prescribe just you should take up next. Pos- and second books of the Kayser 20, would be what you want. bility is that there is no change of your violin after you have hile, but that it is your play- nges for the better. After play- ur muscles and nervous system heir work, making it possible roduce a better tone. 3—Leo- a famous teacher of the violin, ary, but now teaching the violin City.

Rosin
making prepared rosin sold for olinists, various ingredients are mon rosin to bring it to the of softness or hardness. The s of the various brands of rosin ormulas very carefully, and I of them would tell you how his It is said that the addition of amount of melted tallow (the candles are made) to common n a melted state, makes a very violin playing.

nd Shoulder Pad.
nould have to see you play in ise you intelligently about the st and pad to use since people it builds, and some have much than others. It is also true no more mooted point among s than the use of various kinds shoulder supports, pads, cush- orth. Some teachers advise one other and some none at all. It at the great majority of violin cate the use of a chin rest and , worn under the coat in the a and tied under the chin rest ase of a woman. The chin rest enough, and the cushion thick ble the player to hold the violin Very few teachers advise dis- the chin rest altogether, but w. Quite a number insist on a no cushion or pad.
lp you very much if you could onal advice of a good violin is subject. He could help you at kind of a chin rest, and show old the violin. It is very dif- the correct position by looking

mati.
—Sorry the ETUDE cannot re- icle from your local paper de- upposed old Amati. Thousands ncerning "finds" of old Stradi- and other Cremona violins ap- rs all over the United States. y rarely happens that a genuine found, although it is not ab- ssible of course. Would advise your violin to an expert if you in knowing if it is a real Amati.

German "Strad."
E. G. O.—The fact that your violin has "Made in Germany" on the label is quite certain evidence that it is only a German copy of a Strad. Its value depends on just how good a copy it is. If you are not familiar with violin values yourself, your only course is to get a good violin dealer to appraise it for you.

Strads in Existence.
O. O. H.—It is not definitely known how many Stradivarius violins are in existence at the present time. Different estimates have been made, but they are more in the nature of guesswork than anything else. Most authorities maintain that there are several hundred.

Overtrained?
E. L.—Without having an opportunity of hearing you play, anything I could say in regard to what the trouble is with your playing would be pure guesswork. However, I have no doubt our difficulty comes from your late start, at 23 years of age. Looking back on a long life spent in violin teaching, I cannot recall a single pupil who accomplished any results worth while after starting over twenty years of age. It simply cannot be done. Read what Carl Flesch, the famous violinist, says in the April ETUDE: "Violin technic is a peculiar thing, in that it is very quickly and easily acquired in the early years, while later in life no amount of study will make up for the years that have been missed."
It is possible that you have been over-trained, that is that you have been continually kept playing music too difficult for you. You have excellent violinists in the city where you live. Play for several of them and get their opinion as to where your trouble lies.

Inaccurately Worded Label.
M. L. B.—Impossible to estimate age or value of your supposed Amati without seeing it. The copy of the label you send is not an accurately worded Amati label, so the chances are that your violin is an imitation.

Branded Imitation.
F. H. M.—Stradivarius did not brand his violins on the back in the manner illustrated by the photographs of your violin which you send, so it is quite certain that your violin is only an imitation. Just how good an imitation it is I cannot say without seeing it.

Supposed Strad.
O. L.—I am afraid there is hardly one chance in a million that your violin is a real Strad. 2—The ETUDE does not buy violins of that description.

Teaching Beginners.
G. F. D.—As a first book for beginners you would find the *Easiest Elementary Method for the Violin*, Op. 38, by Wohlfahrt, published by the Theo. Presser Co., Phila., Pa., as good as any. 2—The following books will assist you in your teaching: "The Violin and How to Master it" by a Professional Player; "Violin Teaching and Violin Study" by Eugene Gruenberg.

Correspondence Lessons.
V. M. Y.—Under the circumstances, as you have outlined them, I am quite sure that the only way you can accomplish anything in violin study in the right way is to go to a good conservatory or private teacher and take private lessons. After a term or two, your teacher can tell whether you have the requisite talent to continue, and can advise you how far you can probably go in violin playing. A player starting over twenty can hardly hope to build up a big technic, but can often accomplish enough to be the source of much enjoyment to himself and friends. 2.—The trouble with correspondence lessons is that you have no one to tell you where you are wrong and correct your mistakes when you are playing over the lessons.

'Cello Label.
H. E. W.—Labels in 'cellos mean nothing since anyone can buy any kind of a label and paste it in any kind of a 'cello. It would be nothing short of a miracle for your 'cello to turn out to be a real Strad. You will have to show it to an expert. If you have no experts in your city, arrange for an examination by one of the dealers in old violins and string instruments who advertise in the ETUDE.

Tracing Origin.
W. McS.—As there are no marks on your violin to indicate the maker, I am afraid it would be like hunting for a needle in a haystack to try and find its origin. The inscription on the violin throws no light on the identity of the maker.

Tracing Garett Violin.
C. E. G.—Sorry I cannot trace the Isaac Garett, 1899, violin. Possibly some ETUDE reader can oblige.

Purchaser for Old Violin.
N. A.—Matthäis Neüner, Mittenwald, 1720-1793, made many excellent violins noted for their great volume of tone. If you cannot sell the violin in your home town, you might correspond with old violin dealers who advertise in the ETUDE, and they might find a purchaser for you.

Trade-Mark Label.
W. W. T.—There is not over one chance in a million that your friend's violin is a genuine Strad. There are millions of imitation Strads scattered all over the world, all duly labeled Stradivarius, with counterfeit labels. These labels are used more in the way of trade-marks, rather than with any intention to deceive.

The **AMPLITONE** *Trade Mark*
Invented by August Martin Gemünder
(Patents Pending in all Countries)
An invention made of spruce wood, harmonious octave vibrators attached inside of the violin to the lower pin block, with two brass screws.
These Vibrators are always in **sympathetic unison** with the tones played by the violinist and does not require alterations to the violin whatever, it simply makes **THE BEST TONE VIOLIN SOUND BETTER, AS WELL AS ALL OTHER VIOLINS.** It puts the whole violin into action. Circular Sent Free.
The Amplitone is made and installed personally by the inventor. Send your violin for examination.

Cantatas and Oratorios. By rd Terry. Book I. Oxford ress (American Branch); 52 in cloth. Price, fifty cents. volume (Book I) represents a oritative survey of the cantatas Johann Sebastian Bach, from in Arnstadt through his can- *Thomasschule* in Leipzig. Dr. Terry traces the beginnings of the cantata with clarity and with economy of expression; and he gives us a truly vivid picture of Bach's fertility in this *genre*. The tabulated lists of the Bach cantatas are invaluable for study and reference.

The Problem of Modern Music. Translated from the German of Prof. Adolf Weissmann. Bound in boards; 239 pages; illustrated. Published by E. P. Dutton & Company, New York, at $2.50 per copy.
This book of criticism, by the noted Berlin musicologist, is an alert and unprejudiced discussion of the manifold and knotty problems which encompass the path of music in this twentieth century. Prof. Weissmann has his finger on the very pulse of the matter, you feel; and his interpretations and estimates and prognostications appeal mightily for their good judgment and keen perception. His style is lucid, though "packed"—highly readable. No one could peruse this book without a quickened sense of what a crisis we have now reached in the development of music. What is the result to be? Prof. Weissmann has hacked sturdily and not without effect at this Gordian knot.
The introduction to "The Problems of Modern Music" is by Edward J. Dent, M. A., chairman of the International Society for Contemporary Music. It is a diffuse, but interesting, introduction, and should not be skipped.

Summer Readings for the Folk Who Are Musical

It is very gratifying to note the interest in musical literature works, due to the fact that many active music workers find time in the summer months to "read up" on things musical. There are many excellent books published, some that will help and inspire pianists, others that give information and inspiration to vocalists, and yet others that give interesting information, worth while storing up in one's mind, about celebrated composers and their works, and so on through the wealth of musical literature available, there are books sufficient to satisfy the varied musical interests existing. On another page in this issue, the Theodore Presser Co. has given space to suggesting and giving brief descriptions of volumes that will make profitable and entertaining reading for summer months.

There is no joy like being fully conversant with the art you love and there is no time like the present for adding to your store of musical knowledge and at the same time building up a worth-while musical library.

The Value of a Technical Rejuvenation

Teachers and accomplished pianists are too prone, during the Fall, Winter and Spring months to neglect certain phases of their technical equipment in giving attention to their teaching work or their repertoire of those months. Some of the Summer moments that are free of other demands, are profitably devoted by many to regaining former skill in all branches of technic.

The Theodore Presser Co. will be glad to send for examination, works that may be purchased for use in this way. There are such publications as, "Exercises for Developing Accuracy in Piano Playing," by Gustav L. Becker; "Hand Culture," by Anna Busch Flint; "The Art of the Piano," by Theodore Lack; "Concentrated Technic," by Alois Lejeal; "The New Gradus ad Parnassum," by I. Philipp, of which there are eight volumes, each covering some specific field of technic, and other works that are favorites for helpful self-drill, as suggested above.

Early Preparation for Next Season's Teaching Work

The Theodore Presser Co. has nothing to gain in the Early Order suggestion made to its teaching patrons, other than the opportunity of rendering more careful and more individual attention to selection requests than is possible when many teachers are clamoring for immediate attention in the last minutes before the opening of the teaching season. The prudent teacher avoids the disappointment hazards of a last minute rush for materials and by sending in at this time an outline of possible requirements for the beginning of next season, as well as instructions as to the approximate date in July, August or September, by which the material should be delivered, secures not only careful attention, but also as a material sign of appreciation for relieving the Theodore Presser Co. from last minute pressure, is given a saving of about one-half the transportation costs. This music does not have to be paid for any sooner, or returns made any sooner than if delivered at any other time in the next teaching season.

If you do not use the Early Order Plan each season, use it this season and its advantages will be so apparent that future seasons will find you using it regularly.

Album of Study Pieces In Thirds and Sixths

We are pleased to announce a new volume in the series of *Study Pieces for Special Purposes.* The volumes in this series previously published are *Album of Trills, Album of Scales, Album of Arpeggios* and *Album of Octaves.* The fifth volume in the series now being announced for the first time is *Album of Double Notes, Thirds and Sixths.* In modern piano playing the study of double notes becomes more and more necessary, and in this new volume will be found a splendid collection of pieces suitable for the purpose. This is an intermediate grade book, just as are the other albums.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

New Easy Four-Hand Album

There is a steady demand for easy four-hand music. It has been some time since we have published any collections of this nature, but we now have the pleasure of announcing a new compilation. In order to provide for the needs of beginners in four-hand playing, as well as for those a little further advanced, we are including first and second grade pieces in generous proportion. The pieces will be arranged as far as possible in progressive order, just touching the third grade. Only copyright material will be used, and the best composers will be represented by their most tuneful numbers.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Sesqui-Centennial Time in Philadelphia

Although at this writing the Sesqui-Centennial Exposition, commemorating the 150 years of American Independence, is just about getting under way, there are thousands of visitors within the city of Philadelphia.

The Theodore Presser Co. during the period of this remarkable exposition will maintain "open house" to its many out-of-town friends and patrons and every friend and patron visiting Philadelphia should take advantage of this. We are at your service and you can make this your headquarters for resting or correspondence periods, and we will be glad to act as a post office if you desire to have your mail addressed in our care.

Music is playing a prominent part in the Sesqui-Centennial program and there are many treats for music lovers who visit Philadelphia during the period of the exposition.

Come to our establishment at 1712 Chestnut Street. Make yourself known and ask to be shown through the great storehouse of music publications maintained by us.

Some Self-Help Opportunities For Music Students

Wherever possible those desiring to progress in music should seek the classes of a competent music teacher, but frequently summer months separate the teachers and students of a community and then the next best substitute for the student who cannot afford to travel to classes elsewhere, is self study.

Teachers would do well to encourage this because it results in the building of a greater interest in music, assuring the teacher of a pupil who will be ready to resume studies when classes are opened.

It is not altogether advisable to suggest that a pupil do much self-study in technic, beyond keeping up practice in phases already covered, but it is very desirable to turn attention to a study such as harmony, using for this purpose a book that is as clear and easily understood as the "Harmony Book for Beginners," by Preston Ware Orem, or a student who is beyond the rudiments of harmony, could well take up "Theory and Composition of Music," by the same author. "Theory and Composition of Music" is a book that leads one into the stages of actual composition and there are many teachers who could well afford to brush up their theoretical knowledge with the use of this book.

Another suggestion for self-study is the "Standard History of Music," by James Francis Cooke. Everyone interested in music should know something of its origin and developments, as well as the influence exerted by various composers in different periods. This book not only gives information of this character, but gives it in such a way that it is really fascinating reading, instead of study.

How to Play the Piano By Mark Hambourg

Mark Hambourg has won a definite place in the hearts of the readers of THE ETUDE by his exceedingly practical, invariably helpful and always readable articles on the art of playing the piano.

Some years ago in England he wrote a book which had an immense vogue in that country, over fifty thousand copies having been sold, according to our understanding. By arrangements with the publishers, it now becomes possible for us to put this very clear and succinct volume in the hands of our readers at a very moderate price. When one realizes that a lesson of Mr. Hambourg in person would cost over twenty times the price of this book, the value of the volume can be appreciated, because it contains the essence of a great many lessons.

The special introductory price as a new addition to the Presser catalog, is especially low, because we are able to purchase from the former publisher a limited number of bound copies. This introductory price is 80 cents.

Three Dances for Four For the Pianoforte By Cyril Scott

This is a recent *Opus* by English composer, Cyril S Mr. Scott may be classed as among composers, his work travagant and, best of all, gets that no matter whatever there must always be definite terest. *These Three Dance* nally for four hands. They *ensemble* music for the pia three are in triple time, grace ing. While not difficult tech dances, owing to the atmosp ter of the harmonies, will re and finished playing. The t about equal in difficulty.

The special introductory vance of publication is 35 cen postpaid.

Fifty Easy Melodious S For the Pianoforte By A. Biehl, Opus 7

This volume will shortly the *Presser Collection.* These a part of the regular curricu very many teachers and school elementary exercises in mec may be taken up directly at t of second grade work and the right up to the beginning grade. Almost every variety tional passage work is thoro plified. Our new edition will with the utmost care.

The special introductory vance of publication is 30 cen postpaid.

New First and Third Po Album for Violin and P

While the first position, of at the basis of all violin play soon as this position has been lished, the student should beg to make the shift, so as to positions. The position next in is the third position, and the remain for a considerable pe first and third positions. period our album of first and tion pieces will be just right. in this album is a gem well wo agreeable to the listeners an to practice.

The special introductory vance of publication is 50 cent postpaid.

Standard Second-Grade Recreations for the Pia

The Storm for Piano Solo Or Pipe Organ By Clarence Kohlmann

Many thousands annually attend the Ocean Grove Auditorium and hear Mr. Clarence Kohlmann's rendition of *The Storm.* We now have this work in preparation, both as a piano solo and as an organ solo. It is one of the best storm pieces ever compiled. In addition to the actual storm portion and other original material of Mr. Kohlmann's, it contains quotations from other composers; Grieg, Haydn, Tschaikowsky and others are represented, and well-known hymns are introduced in chime effects, together with some others of the good old songs.

The special introductory price in advance of publication is as follows: For the piano solo, 25 cents per copy, postpaid; for the organ, 25 cents per copy, postpaid.

Album of French Composers For the Pianoforte

There is a distinctive charm and grace in the piano music of the French composers, and their compositions find much favor with pianists of discrimination. Some of the most delightful drawing-room pieces are found in the works of such composers as Saint-Saëns, Godard, Widor, Dubois, Debussy, Pierne, Wachs and Lack. We have included a generous number of these in this new compilation. None of these pieces will be beyond the ability of the average good pianist. This album will be a most useful one to have in the performer's library when material is desired for a few moments' diversion at the keyboard, and pianists will also find in it some material for recital or concert programs. The special advance of publication cash price is 35 cents, postpaid.

Penitent Pirates—Operetta By Paul Bliss

Although Mr. Bliss has other successful Operettas and Cantatas to his credit, this is the first Operetta or Musical Playlet offering by Mr. Bliss engaging the participation of both sexes to be added to our catalog.

We have sold thousands of copies of *Ghosts of Hilo,* an operetta for young ladies, and after examining the manuscript of *Penitent Pirates* for both young ladies and young men, we feel certain that its success will be even greater than the gratifying success of *Ghosts of Hilo.*

Penitent Pirates is nicely arranged in two acts, and the music surrounding the excellent plot is not at all difficult, even the majority of the choruses being in unison.

Tunefulness and a feeling of freshness is ever present in all the musical work, and the staging can be handled easily, its elaborateness being governed by the facilities for making the most of the opportunities for picturesque staging.

Those who are interested in works of this kind most certainly should have a copy, whether they plan to produce something late in the fall of this year or at some later date in the future, and our Advance of Publication offer herewith gives opportunity to secure a single copy at a price of 40 cents, postpaid.

Twenty-Four Caprices For Violin Solo By P. Rode

Here is another very strong addition to our constantly increasing *Presser Collection—Twenty-four Caprices in the Form of Studies for Violin Solo in All the Twenty-four Keys, by P. Rode.* This fine work is used after the Kreutzer Studies and, in fact, is considered one of the three indispensable works of advanced violin technic, viz.: Kreutzer, Rode and Fiorillo. This new edition will be edited by Mr. Otto Meyer, the personal representative of Sevcik in this country. Mr. Meyer has done the editing of a number of other recent works in the *Presser Collection,* and we are sure that this new edition will meet with the approval of all teachers who demand the best in educational publications.

The special introductory price in advance of publication is 45 cents per copy, postpaid.

Beginning with the Pedals Of the Piano By Helen L. Cramm

The announcement of the approaching publication of this work has brought a most gratifying response from our music teacher patrons, many of them taking advantage of the low advance of publication price to place orders for first edition copies. This little work should prove very useful to piano teachers who have in charge the instruction of ambitious young students. The proper handling of the pedals is of such vital importance to good piano playing that the study of them should begin as early in the student's course of study as possible. These attractive little studies, by one of the most successful writers of juvenile educational material may be given to students in the second grade. While this work is being prepared for publication, we are booking orders for it at the special price of 30 cents a copy, postpaid.

A New Collection of Favorite Songs and Choruses for all Occasions

Wherever groups congregate for singing this new collection will come in handy. It will prove useful alike for home, school, lodge and community gatherings. It consists of the best and most popular songs, both old and new. Most of the numbers are so arranged as to be sung by mixed voices in four-part harmony. Others are intended to be sung in unison to the usual piano accompaniment. Our aim has been to make this the best and most comprehensive community singing book ever published.

The special introductory price in advance of publication is 10 cents per copy, postpaid.

Twelve Melodious Studies In Scale and Chord Passages For the Pianoforte By C. W. Kern, Op. 560

Mr. Kern is a very prolific writer and our catalog contains most of his successful piano compositions. He is a practical musician and many teachers use his piano pieces in their work, as they are almost always suitable for teaching purposes. This latest contribution of his is a set of piano studies in the form of study pieces, beginning in Grade 2 or 2½ and progressing into the Third Grade. Each of the studies has a title, and each is accompanied by a note explaining the technical object to be attained. Teachers who wish to obtain these useful studies may order a copy in advance of publication at the special price of 30 cents a copy, postpaid.

Technic for Beginners Preparatory to Hanon or Pischna By Anna Priscilla Risher

This is the first book of regular daily finger exercises. It is intended to be used over a considerable period. Just as soon as the young student has attained the correct hand position and finger action, this work may be taken up. The idea is to keep the entire work in practice after it has been first learned, a page at a time. It contains all the necessary two-finger exercises, five-finger exercises, crossing exercises, scale work, and so forth.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Brehm's First Steps for Young Piano Students

This is a very useful beginners' book, and when it was published by Brehm Bros. it was used by many teachers who prefer the very first studies to be written in the treble clef for both hands. Having acquired the Brehm Bros. catalog, we are now going to publish this attractive book in a brand-new, revised edition, and we suggest that teachers who are familiar with the work, and those who desire to become acquainted with its merits, take advantage of the special advance of publication cash price, 25 cents a copy, postpaid, to place their orders while this special offer is in force.

World of Music

(Continued from Page 481)

Franz Schalk will retire as director of the Vienna State Opera, after having been associated with this famous theatre for more than twenty-five years.

With "H. M. S. Pinafore" enjoying a splendid and popular revival at the Century Theatre and "Iolanthe" filling the Plymouth of New York, Gilbert and Sullivan seem still to have a perennial hold on the taste of the great public. And the secret is that they possess art in their librettos and music, instead of presenting a mélange of machine-made mummeries of both.

Paganini's remains, according to late news, have been removed from the Goione family vault near Padua, where they had formerly rested, to the churchyard of Staglieno, in Genoa, which was his place of birth and where the Municipal Palace contains the Guarnerius violin which was the master's favorite.

Patty Stair, pianist, organist and composer, passed away at her home in Cleveland, Ohio, on April 26. She was one of the two women organists of Ohio permitted to wear the honor robe of the American Guild of Organists, of which she was a Fellow. She was also widely known as a teacher.

The Oldest Opera known to musical historians has been discovered in lower Egypt. It is a mime in the form of an opera and dates from the Graeco-Roman era (2 A. D). The action takes place on the shores of the Indian Ocean.

The St. Olaf Choir, which is making a tour of Europe, sang on April 20 before the King and Queen of Norway. The concert was in the aula of the University at Oslo, and the King and Queen, having expressed a desire to hear it, came fifteen minutes early to meet the members of the choir, who are children and grandchildren of men and women who years ago left Norway.

The Pennsylvania State Chapter of the National Association of Organists met for its sixth annual convention, at Lancaster, on May 25. A demonstration of "Seven Octave Features and the Development of Synthetic Tone" was one of the most interesting elements of the meeting.

Manuscript Musical Compositions of Sibelius, the great Finnish composer, and of other modern writers, have been given to Yale University by Mrs. Carl Stoeckel, widow of the patron of music. There are two hundred items, including forty volumes of orchestral scores.

Unpublished Orchestral Works by American composers had their innings on April 23, when a program of them was interpreted by the Rochester Philharmonic Orchestra, under the batôn of Howard Hanson. This was the third of these concerts which the Eastman School of Music sponsors, in order that composers may have the opportunity of hearing their works adequately presented and thus profit by their former writings, to the production of more perfect art.

The Six "Brandenburg Concertos" made the program of the last of the season's concerts of the Queen's Hall Orchestra (London), under Sir Henry Wood. Sir Henry has done much to popularize the works of the great Cantor.

Opera in Milan during 1925 received five hundred and eighteen representations, of which four hundred and forty-five were of Italian works. Verdi's "Traviata" led with forty-two performances, while Donizetti's "Lucia di Lammermoor," Rossini's "Barbiere di Siviglia" and Mascagni's "Cavalleria Rusticana" ran second with thirty-five performances each. Of foreign works Gounod's "Faust" led with fifteen hearings.

Radio Broadcasting has made such inroads on the sales of phonograph records that the royalties of such a popular composer as John Philip Sousa are reported to have fallen off sixty thousand dollars since 1909, leaving him for 1925 but a mere "pittance of twenty-nine thousand and five hundred dollars from this source."

The Washington Symphony Orchestra of eighty-one players, under the direction of Kurt Hetzel, formerly a conductor at the Royal Opera of Munich, gave its inaugural concert at Poli's Theatre on the afternoon of April 20.

"The Bell's First Note," or as some call it, "The Liberty Bell's First Note," used for the cover illustration of this issue of THE ETUDE Music Magazine, is by J. L. G. Ferris, whose paintings of incidents in early American History are world famous. "The Bell's First Note" is a scene in the foundry of Pass and Stowe, Philadelphia, 1753. John Pass, one of the firm, stands at the right. The chairman of the Committee appointed to buy the bell for the State House was Isaac Norris. He is the gentleman in the gray coat talking to Benjamin Franklin. The young lady is a relative of Isaac Norris, and is about to strike the bell for its first note, which proved to be beautifully clear and resonant.

THE PRESSER PERSONNEL

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

Mr. Robert H. Rabe

Mr. Robert H. Rabe, who came to this company in 1916, is a highly qualified expert on the staff of the Publicity Department and covers the catalog division of this Department.

The Theodore Presser Co. publications number close to 30,000. Practically all of the detail attending the compiling and keeping up to date the many classified catalogs necessary to so large a number of publications, has been under the supervision of Mr. Rabe. The catalog section also keeps on hand catalogs and folders of other publishers that aid in serving our patrons.

Mr. Rabe also oversees the Filing Department and frequently in the last checking of communications before they are filed, he discovers that certain additional information can be given to our patrons, or that a search in certain channels will reveal the correct publication desired, although the order gives incomplete or incorrect title.

Starting in the music business with a Middle Western house at a very early age, Mr. Rabe has to his credit 25 years in the music business. His familiarity with the bibliography of music publications is amazing, and he also possesses personal musical accomplishments, which extend into the field of composition.

So, in introducing to our many friends and patrons Mr. Robert H. Rabe, we can sincerely say that here is a member of our staff who contributes much in seeing to it that music buyers know of the publications that are most valuable to them, and also participates to a high degree in our efforts to have prompt and accurate service in the supplying of any publications desired.

ORGANIST'S OFFERING for CHURCH, RECITAL and MOTION PICTURE PLAYING

COMPILED BY
PRESTON WARE OREM

A collection of Twenty-six very desirable Organ Numbers

In these days when the organ is in use more than ever before and so many excellent organs exist it is very essential that the organist possess a fine variety of new and good material. ORGANIST'S OFFERING is a volume that offers just such material in a convenient form. A great number of organ compositions were considered and, after very careful consideration of their respective merits, eliminations were made resulting in the retaining of only those numbers that would be most suitable for the purposes for which this volume was compiled, pieces most of which are not to be found in any other volume.

The contents include a number of the best of recent compositions as well as some very excellent arrangements from the classics.

ORGANIST'S OFFERING is well printed on good paper, the cover is stamped in gold and the binding gives a leather bound appearance. The publishers have supplemented well the painstaking labours of the compilers by producing an attractive volume.

"Organist's Offering" represents a useful compilation of pieces for the purposes designated and should have a large sale. The organ arrangements are well made, and the contents of the book musically interesting.

FREDERICK MAXSON
Organist, First Baptist Church, Philadelphia, Pa.

PRICE $1.50

THEODORE PRESSER CO.
1710-1712-1714 CHESTNUT ST., PHILA. PA.

A Dozen Melodies for Saxophones By Clay Smith

Mr. Clay Smith is best known through his many successful songs and as the director of a well-known concert organization. One of his specialties is the saxophone. In this new volume now in preparation he has taken twelve of his most successful songs and arranged them for saxophone and piano. There is one volume of piano accompaniments which will do for all, but there are separate parts in solo or duet form for the C Melody Saxophone, the E-flat Alto Saxophone and the B-flat Tenor Saxophone, respectively.

Either of the saxophone volumes may be ordered at the advance of publication price of 30 cents, each, postpaid. The piano accompaniment may be ordered at the special low price of 45 cents, postpaid.

Five Little Tunes for Five Little Fingers—Pieces for the Left Hand Alone By Mildred Adair

Pieces for the left hand alone are very much in fashion. Young students are always proud of being able to exhibit their technical proficiency in this manner and, besides, excellent practice is afforded the left hand. The new book of Five Little Pieces, by Mildred Adair, contains about the easiest numbers for the left hand that we have seen. We would grade them about one and one-half. This volume has a further advantage in the fact that the student, in addition to developing the left hand, gains also an elementary knowledge of the use of the pedal.

The special introductory price in advance of publication is 25 cents per copy, postpaid.

Beware of Fraud Agents

The American public is too prone to trust people unknown to them. Daily receipt of letters of complaint from our musical friends who have paid out good hard American dollars to swindlers with smooth tongues is the reason for this warning. Pay no money to strangers no matter how plausible or heart-rending the story may be. Look out for so-called students trying to get votes for tuition in college. Look askance at the supposedly ex-service man. Do not let your sympathies run off with your pocketbooks. We cannot be responsible for the work of swindlers. If there is any question as to the responsibility of an agent, take his name and address, pay him no money. Send the address to us with your subscription and we will credit the agent with his commission.

Three Splendid Summer Etudes for 35c.

We will send the June, July and August issues of the ETUDE MUSIC MAGAZINE as a special introductory offer to new subscribers for the small sum of 35 cents. This gives everyone interested in music an opportunity to become acquainted with the world's premier musical journal, the ETUDE MUSIC MAGAZINE.

Changes of Address

In giving us changes of address, always mention both your old and new addresses. Do not depend on a notice to the postmaster when changing an address. Second class mail matter will not be forwarded and failure to advise us will cause subsequent numbers to go to the old address and be lost or destroyed.

Splendid Combination of High Class Magazines with Etude at Substantial Reductions

If you wish to take advantage of any of these bargains and your present subscription has not yet expired, send the order with the price and give us the expiration date on your present subscription. We will see that the new order does not take effect until your former subscription expires.

Dancing Elves

By Ethel V. Moyer

THEODORA had had a big shining gold star for three weeks in succession. She felt quite sure that she would get another one this week for she had practiced the whole of a new piece when her teacher had told her to take only the first page.

Now she was returning from her lesson in a somewhat dejected mood for she had not received her gold star; and her teacher, Miss Bradley, had felt quite grieved with the performance of her "Dancing Elves."

"You know, Theodora," Miss Bradley had said, "that I told you quite positively to practice only the first page. And don't you remember how I said you should play the accompanying chords? So very lightly, like elves dancing on flower petals or on tiny blades of grass?"

Theodora had answered, "yes," and hung her head.

Miss Bradley continued. "You believe in fairies, don't you, Theodora?" "Oh yes," replied Theodora, with more enthusiasm.

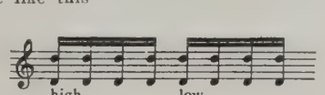
"Then, you know that you must play fairy dances with lightness and delicacy, like a feather blowing in the wind, or like flower petals dropping from the blossoms."

"I saw the cherry blossoms blowing off as I came here," replied Theodora, "and they looked like snowflakes."

"Just so, that is the way they must sound. But I am afraid the chords as you have played them would do for a bear dance better than that of a fairy."

So after Theodora had taken her music home she decided to go to the edge of the woods back of her house and gather flowers. There were just loads of spring beauties growing in great clumps by an old fallen tree. After she had gathered all she could carry she sat on the fallen tree to arrange the flowers in a nice bunch. The sunshine was very warm and in a few minutes she had fallen asleep. Presently she heard the sound of a tiny horn, very silvery and musical. How beautiful it was! Then she heard more music that sounded like tiny violins. In just a moment the woods was filled with fairies. Some rode on the wings of the bumblebees and a whole troop on the wings of a dragon-fly!

Theodora looked with astonishment. For there they were, gathered on the spring beauty blossoms and dancing so merrily just where she had picked her flowers.



The air was filled with their music, so beautiful but so faint! They danced so blithely and gracefully; so lightly that the blossoms did not even bend under the weight of a whole troop!

Theodora rubbed her eyes and looked about her. Her blossoms had fallen to the ground in a dejected heap. "I must have been asleep," she said, as she gathered up the spring beauties, "but now I know how the fairies dance. I never thought they were such little people. But I have seen real fairies, and I am sure I shall know how to play my "Dancing Elves."

Question Box

DEAR JUNIOR ETUDE:

In a book of octave studies there is a passage like this

Will you kindly explain what is meant by high and low?—G. K. (Age 13).

A. This refers to the position of the wrist, which of course, must always be relaxed. Sometimes holding the wrist in a fixed position when playing octaves, is apt to produce a stiff condition, but by varying the position of the wrist, high and low, this condition is avoided and the player is enabled to give more rapidity and lightness to the octaves.

DEAR JUNIOR ETUDE:

Will you please tell me the correct pronunciation of the word "Etude?"

E. S. I. (Age 15),
Connecticut.

ANS. Pronounce "E" to rhyme with Day; "tude" to rhyme with dude.

DEAR JUNIOR ETUDE:

There are no musical clubs or schools around here. Not many people know how to play an instrument in this town. There is no way of taking lessons. Does it do any harm to practice without a teacher? Could you tell me how to strengthen my fingers?

From your friend,
LILLIAN PALINUS (Age 11),
Rhode Island.

Ans. It is always a pity when those, who like music and want to take lessons, have no opportunity of doing so.

If such a one knows what is meant by a good hand position, good finger, wrist and arm motion and good relaxation, one might be benefited by practicing without a teacher. But these things are almost impossible for children to acquire by themselves, and such practice might not only be useless but might be harmful to the muscles and nerves. However, one can learn alone, with the help of a good book, how scales are built, how chords are put together, and how different a major chord sounds from a minor one. Perhaps you could find some one who could help you a little and more or less guide your work without giving you regular lessons.

Betty's Scale-Song

By Alice Hamlet

When Betty practices the scales
She starts 'way down at C
And sings this jolly little song,
As happy as can be:

"Wrist out, thumb under, second up,
Transfer—Oh, this is fun!
The thumb goes under, second up,
Third up, transfer—C's done!"

And then she plays the scale of G,
And many others, too;
All perfect, for the song just tells
Her fingers what to do.

Are You Monotonous?

YOU KNOW there are lots of words in the dictionary that mean nice things, and lots that mean tiresome things, and "monotony" is one of the tiresome ones.

Lots of things are monotonous, and lots of people are monotonous, and things and people get to be that way when they are always too much the same, never any change or variety.

You may have six favorite things to eat, but if you had to live on them and never get any thing else, you would grow tired of them. You must have variety.

You may have six favorite books, but if you could never read anything else you would grow very tired of them; you would long for some variety.

You may have a favorite piece of music, but if you were never permitted to play anything else, not only you, but everybody who heard you, would long for something else.

And sometimes, even the way people play the piano is monotonous. You have probably heard these people over and over again. Perhaps you are even guilty of being that kind of a person yourself. If so, why?

These people start to play their piece fairly loud and fairly soft, yet neither one thing nor the other, and they continue in the same deadly monotonous way to the end.

The loud is only half loud, so it sounds exactly like the soft, which is only half soft. The staccato is only half staccato, so it sounds exactly like the legato, which is only half legato. The light tones sound just like the heavy tones, because they are neither one; the retards sound just like the accelerandos, because both are a minus quantity; the crescendos sound just like the diminuendos because they do not do either.

And what is the remedy?

A good, big bottle of exaggerated extract of expression, taken daily during practice. Shake well before using, and never cork the bottle.

Try it.

The Choir Master

Each Month Under This Heading We Shall Give a List of Anthems, Solos and Voluntaries Appropriate for Morning and Evening Services Throughout the Year.

Opposite "a" are anthems of moderate difficulty, opposite "b" those of a simple type.

Any of the works named may be had for examination. Our retail prices are always reasonable and the discounts the best obtainable.

JUNIOR ETUDE—Continued

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original stories or essays and answers to puzzles.

Subject for story or essay this month—"Patriotic Music." Must contain not over one hundred and fifty words. Any boy or girl under fifteen years of age may compete whether a subscriber or not.

All contributions must bear name, age, and address of sender written plainly, and must be received at the JUNIOR ETUDE Office, 1712 Chestnut St., Philadelphia, Pa., before the twentieth of July. Names of prize winners and their contributions will be published in the issue for December.

Put your name and age on upper left hand corner of paper, and address on upper right hand corner of paper. If your contribution takes more than one piece of paper do this on each piece.

Do not use typewriters.

Competitors who do not comply with ALL of the above conditions will not be considered.

THE MINUET
(Prize Winner)

The Minuet is a kind of slow graceful dance, or the music for the dance. Though the minuet is not danced now, except in plays or pageants, the music will live forever. There is no music that contains as much grace and charm as minuet music. Mozart was noted for his minuets. The one from his opera "Don Giovanni" (or Don Juan, as it is also called) is probably the most famous minuet ever written. He wrote many of his minuets when he was a young boy; and they are still played. Other famous minuets are by Paderewski, Boccherini, Beethoven, Gluck and Handel.

JACK COSTELLO (Age 14),
California.

THE MINUET
(Prize Winner)

The minuet—even at the mere mention of the word our minds wander back to the time of Washington, and we picture the people, both old and young, in their quaint and beautiful attire, gracefully bobbing up and down in the long hall. Whenever we hear a minuet played, the same transformation takes place in our minds; and our spirits, if troubled, are calmed, and we can feel ourselves sailing on the smooth sea of bliss, taking part in the minuet. Even in this day of wild and ungraceful dancing the minuet cannot be forgotten. It has survived. What music makes us as satisfied with every one and everything as the minuet?

FREDA ROSNER (Age 14),
Pennsylvania.

THE MINUET
(Prize Winner)

There are two thoughts that come to our mind when we say minuet. The first is the dance. The dance is slow and graceful and consists of a coupée and a high step. It was first danced in Poitou in France, in the seventeenth century. It is called minuet because of its short steps. The second thought is the music that is composed and regulated to the steps of the dance. It is usually in three-four or three-eight time. The minuet was often used as a movement in the old suites and later in the sonatas and symphonies.

ELEANOR MAYTILA (Age 12),
Minnesota.

Honorable Mention for Minute essays in April:

Ruth Corrine Taylor, Leona Keyser, Mary F. Higbee, Helene Juergens, Earl Lovell, Uriel M. Ittenberg, Doris M. Evans, Mary Morton, Elizabeth Evans, Jeanne Murlhy, Beatrice Fuller, Anna Bess Tipton, Miriam Gold, Esther Heiser, Mary Lucente, Eleanor Fowler, Mary Ellen Simpson, Claude Faust, Florence Skeels, Lucy Allen, Mary Jane Pearce, Constance S. Taylor, Margaret Sewell, Floy Stegall, Thelma C. Rainey.

N. B. A great many contributers this time evidently looked up the word minuet in their encyclopedias, and copied out just what the book said, as several compositions came in from different parts of the United States, word for word alike, others with very slight changes. Naturally these compositions did not receive prizes, although they gave very excellent definitions of the minuet.

A frog can only croak you know,
But when he does he croaks just so;
Listen to his song a minute
And you'll find there's music in it.

The World of Music

ica," a Grand and Patriotic , employing fifteen participants, was by the Philadelphia gue, at the Municiium, on June 24. the outstanding is a monster chorus usand voices under tion of Bruce A. ich, in spite of its proportions and at rwhelming volume ang with a fineness of attack, and even to the vanishing pianissimo, pected only from the small body of ices. A tournament of bands and is ended in thrilling numbers by a dy of a thousand instruments, led N. Hoxie. Gorgeously costumed and ballets interpreted American rom "Columbus Before Isabella" in leading in the "Dawn of World hile attending these were stirring ifantry and marine maneuvers. The was enjoyed by an audience of sixty- forty thousand of the sold-out ca- he Stadium remaining away because ened repetition of inclement weather l prevented the performance of the vening. This, the most massive and ageant ever presented in the East, to the initiative and organizing Mrs. Frederick W. Abbott, director iladelphia Music League. Through esy of the Sesqui-Centennial and ague officials the programme was free" on the following Sunday even- mn estimated hundred thousand were ay from the stiles.

MRS. FREDERICK W. ABBOTT

Horter, a fifteen-year-old girl of Massachussetts, won first honors in ational Music Memory Contest con- the National Federation of Music tlantic City, New Jersey, on June 3. l prize was won by Imogene Young of , Kentucky, while third prize went Street of Hattiesburg, Mississippi.

of the 16th, 17th and 18th Cen- to be presented in a Festival to be Haslemere, Surrey, England, from to 31, under the direction of Arnold , the eminent authority on the musi- of this period.

Army Band is to become an indi- it, like an infantry company, in- mere part of the headquarters; and rs are to become commissioned offi- a first or second lieutenancy as the ead of merely warrant officers as in these changes to be effected by a bill passed the Senate at Washington.

ravinsky is announced for a guest e at La Scala, Milan, when he will ie first performance in Italy of his rnol."

argest Theatre in the World" planned for Genoa, by a group of pitalist. It is to stand in the gliata, facing the sea.

Boito's "Nerone" had its South American première on the evening of May 22, when it was presented at the Teatro Colon of Buenos Aires, with Claudio Muzio as *Asteria* and Aureliano Pertile as *Nero*, a rôle he created at the world première of this work at La Scala, Milan. The original scenery also was shipped from La Scala, this opera having set new standards in scenic demands splay of pageantry, in Italian musical uctions.

BOITO

mory Glee Club, of Emery Uni- orgia, is making a tour of England, purpose being "to foster friendly tween British and American stu-

Strauss, composer of "The Choco- r" and other popular light operas, ngaged for a four months' tour of States, when he will lead the first production of his new operetta, as well as the more familiar of nes.

Mildred Caroline Seeba, of Jacksonville, Florida, and winner of the first Caruso Memorial Foundation Fellowship, has been concertizing in Italy and winning fine press opinions.

An Encouraging Omen! Dame Report is telling her neighbors that managers of light opera and musical comedy are discovering a demand on the part of their audiences for "better voices and better singing."

A Verdi Festival, with Toscanini conducting, is to be held at Busseto in September, commemorating the twenty-fifth year of the composer's death.

The Musical Times, of London, issued in June its one thousandth number. Founded in 1844, it has the distinction of being the oldest living English musical periodical as well as one of the two or three oldest in the world. Our cordial felicitations!

At the Nineteenth Alberta Musical Festival, which this year was held at Edmonton, May 11 to 14, the first prize for choral singing went to the Male Chorus of Edmonton, while the first prize for soprano solo singing was won by Mrs. Gordon James, also of Edmonton.

No "War Songs" are known to the Tule Indians of Panama, according to a report on their music, made by Frances Densmore of the American Bureau of Ethnology. As this peace-loving tribe never has been at war, all their songs are intended for the curing of the sick, or are connected with the happiness of life. Differing from other North American tribes, they have no songs of gambling, the hunt or of appeal to the supernatural.

The Broadcasting Company of America—Station, WEAF, New York, announces the following operas to be on the air from 10.00 to 11.00 P. M., Daylight Saving Time (9.00 to 10.00 P.M., Eastern Standard) on Monday evenings, as follows: August 2, "Barber of Seville;" August 9, "Samson and Delilah;" August 16, "Martha;" August 23, "Ballo in Maschera;" August 30, "Mignon;" September 6, "Ernani;" September 13, "Manion."

A New Type of Horn for phonograph and radio, assuring improved sound reproduction at a reduced cost of manufacture, has been perfected by Dr A. L. Foley of the department of Physics of Indiana University. A new series of bends and folds according to scientific principles of sound reflection, renders the improvement. In his long research Dr. Foley has built more than one hundred different types of horns as well as to make a complete phonograph.

The American Union of Swedish Singers held a festival in New York, from May 30 to June 1. At the second concert, in the Metropolitan Opera House, the Crown Prince and Crown Princess of Sweden were present. Mmes. Julia Claussen and Marie Sundelius of the Metropolitan Opera Company, and Folke Anderson of the Stockholm Opera, were soloists. Previous to the Festival the chorus of five hundred went on May 29, to Washington, to sing at the ceremonies of the unveiling of the monument to John Ericsson, inventor of the "Monitor" of Civil War Fame.

The One-Thousand-Dollar Prize of the North Shore Festival Association has been awarded to Edward Collins, Chicago musician and composer, for his "Tragic" Overture. The composition is a symphonic overture, classic in character, and ending with a funeral march. It was first heard by the public as a feature of the opening program of the North Shore Festival on May 24, when it was interpreted by the Chicago Symphony Orchestra under Frederick Stock.

An Exposition of Contemporary Italian Music is to be held at Milan at an early date. Ildebrando Pizzetti, Adriano Lualdi, Ettore Panizza and Retzo Bossi are among the eminent composers promoting the project which is for the purpose of showing the musical productivity of Italy and to give the general public a better acquaintance with it.

Feodor Chaliapin made his Covent Garden début on the evening of May 25, achieving another triumph. He sang his famous title rôle in "Mephistofele;" and among the notables in the audience was Dame Nellie Melba, one of the most famous of *Marguerites* in Gounod's operatic version of the same story. At the close of the performance she is reported to have congratulated the Russian basso with an enthusiastic, "You made a perfect devil."

PETER C. LUTKIN

A Gift of One Hundred Thousand Dollars has been made from the Carnegie Corporation of New York to establish a course in Church Music at the Northwestern University School of Music, Evanston, Illinois. Dean Peter C. Lutkin is to be at the head of the enterprise, and plans are in view to make this the beginning of a movement that should eventually raise our country nearer to the high position which England holds in church music and as a singing nation.

A Mozart Composition for Orchestra, written at ten years of age when at The Hague, for the "Galimathias Musician," and with a closing fugue on the folk-hymn, *Wilhelmnus of Nassau*, had its first hearing in Germany when recently revived by the orchestra of the Mozartverein in Dresden.

Virgin Islands celebrated Music Week under the leadership of Bandmaster Alton B. Adams, U. S. N., who also is supervisor of music in the public schools. A public school festival, in which two thousand children participated, was accompanied by the United States Naval Band. Nothing provincial about our oceanic neighbors!

The Northeastern Saengerbund of America met on June 20 with thirty-five hundred present in the Metropolitan Opera House of Philadelphia. For three days there was a festival contest of German song with Mae Ebrey Hotz, Elsa Alsen and Henri Scott as leading soloists.

Michel Gustikoff, a native of New York City, born of a family musically prominent for two hundred years, educated mostly under the instruction of his father, of Mark M. Fonaroff and Franz Kneisel, and for the last nine years the concertmeister of the St. Louis Symphony Orchestra, has been elected to a similar position with the Philadelphia Orchestra.

HOWARD HANSON

The Thirty-third Ann Arbor May Festival was held in the Hill Auditorium from May 19 to 22. The opening performance by the Chicago Symphony Orchestra, under Frederick Stock, with Mme. Louise Homer as soloist, was greeted by an enthusiastic audience of five thousand. Mme. Homer receiving an ovation and numerous encores. The Choral Union distinguished itself under the bâton of Earl V. Moore. Mendelssohn's "Elijah" filled the second evening; Howard Hanson's "The Lament of Beowolf," with the composer conducting, was a feature of the third evening; while a gala concert performance of "Lohengrin," with Florence Austral, Richard Crooks, Augusta Lenska and Richard Bonelli as leading soloists, brought the Festival to a close.

Fourteen Thousand, Five Hundred and Thirty-two Competitors, including soloists and members of vocal and instrumental organizations, were entered in the Glasgow festival (Scotland) in May. These competition festivals have been the means of awakening interest and spreading musical culture throughout the British Empire, as they have extended to practically all its dominions.

Weber's "Oberon" celebrated the centenary of its première on June 4. It was first performed at Covent Garden Theater, London, and the composer, who had gone thither in a weakened condition, to superintend the preparation and production of his work, died there soon after its first hearing.

The "Violinista," an automatic violin-player, has been successfully demonstrated in Paris, by its inventors, M. Emile Aubry, of the Institute of Arts and Manufactures, and M. Gabriel Boreau, of the School of Physics and Chemistry. It is claimed to play "like a violinist, with the same purity of tone, virtuosity and variations."

John D. Spreckels, music patron of San Diego, California, recently passed away. He shared with his brother Rudolph in donating the splendid pipe organ to Balboa Park at the time of the Panama-California Exposition, and since that time he has contributed the salary of Dr. Humphrey J. Stewart, the official organist of the almost daily free concerts.

The Goldman Band Concerts return to the Mall in Central Park, New York, this Summer, having last year been removed from there by the Guggenheim family, sponsors of the concerts, because of political interference.

"Victor Herbert Week," beginning on May 24, was observed in over three hundred theatres of the United States, by featuring the operas, overtures, instrumental and vocal compositions of the popular composer, as a tribute to his memory. No composer in America has done more than did Mr. Herbert to raise musical theatrical entertainment of a popular type to a position of real artistic worth, so that this recognition comes as a true appreciation of merit.

VICTOR HERBERT

A National Conference for Better Church Music will be held in connection with the Chautauqua Assembly at Chautauqua, New York, from July 22 to 25; and the Council of Fine Arts in Religion will convene at Conference Point, Lake Geneva from August 6 to 8. Among the speakers will be H. Augustine Smith of Boston, Mrs. Edgar Stillman Kelley, President of the National Federation of Music Clubs, and Albert Stoessel, conductor of the New York Symphony Orchestra at Chautauqua.

Miss Mary Venable, one of the leading piano teachers of Cincinnati, and for twenty-five years a member of the faculty of the College of Music of that city, passed away in that city on May 31.

The Covent Garden "Grand" Opera Season, for the first time since the war is this year a success, hundreds are being turned from the doors at almost all performances, and musical London is correspondingly happy.

It is the constant ambition of the editors and publishers of the "Etude" to make each issue of the journal worth many times more, in practical instruction, stimulating inspiration and real entertainment, than the price of the entire year's subscription. The music lover can not possibly find a better two-dollar investment.

During Your Visit to the "Sesqui"

WE want you to make our store your headquarters for receipt of mail, etc. Let us serve you in any way which may be helpful to you.

Remember, we will be glad to welcome you either at 1712 Chestnut St., or at our booth in the Liberal Arts Building of the Sesqui group.

We are preparing a very attractive Sesqui souvenir of interest to all music lovers, which we will gladly forward to anyone upon request.

Earn a Teacher's Diploma
or
Bachelor's Degree in Music
In Your Spare Time at Home

YOU can secure that coveted Diploma or Degree right in your own home, as many other established teachers have done by taking our accredited extension courses.

HE PROOF OF THE PUDDING!

Advanced Composition Course

your course the intricate mysteries of music have been very plainly unfolded I have taken tunes, sometimes original, harmonized them, juggled them about us forms, with so much ease that it seemed almost unbelievable, thanks to your ion and instructors. In my work as orchestra leader and teacher of violin I work indispensable, and cannot recommend it too strongly to both student and d musician—professional as well as amateur.

JOHN FEGUERAS, 65 East Avenue, Rochester, New York.

es Certified Teacher

e successfully passed the State Board Examination and am now an accredited in the State of Oregon. I owe this to your Normal Piano Course, for to pass the examination before, but was not proficient in the answers, and Then I saw your ad in THE ETUDE and determined to try this Course. It n successful, and I am very grateful.

MRS. LULU E. DIEBEL, Seaside, Oregon.

Chorus Won First Prize in Interscholastic League

Conservatory has received considerable advertising through me, as my Junior Chorus recently st prize in the Interscholastic League. They competed with seven schools—three of which ge independent schools. I feel that much of my success is due to Mrs. Clark's course in Public Music.

MRS. ELSIE V. POST, Glen Flora, Texas.

School Music Graduate has Just Secured Life Certificate

now a full-fledged director of the Melvin Community High School Orchestra, having received my te from our superintendent on the recommendation of the State Board after presenting my received through my studies with your institution.

PROF. F. W. REUTER, Violinist, Dewey, Ill.

ierwood Normal Course Systematic And Complete

Sherwood Course has taught me many things I have never heard any of my teachers mention. The course has enabled me to increase the size of my id I can't praise your methods too highly. I recommend them to all.

MARY ELLEN FOLEY, Owosso, Michigan.

Tone—Result of Weldon Course

Weldon lessons have benefited me much. My tone is clearer and better, and the has greatly improved. My breathing has also improved to a great extent, and that the high tones are much easier for me than ever before.

PAUL BLOEDE, 615 R. 124th St., Cleveland, Ohio.

r in Convent Praises Courses

graduate of your Harmony, History and Advanced Composition Courses I say that I think your courses cannot be improved upon. While they are not way a *short* road to success, they surely are a most *safe* one. I trust that this ll bring you a large class of eager new students, and that they will enjoy the s much as I did.

SISTER M. AGNITA, 60 Broad Street, Providence, R. I.

s Ready to Praise the School

people do not know that your school gives credits for the study. This should d in your ads. and you should give the names and addresses of your graduates who are doubtful. I am glad at any time to give a good word for you, as I ceived untold benefit by taking your courses, even though I had played pro- ılly for 15 years. I am a member of the Teachers' Association and know eat a need there is for teachers to take Normal Courses. Your courses have value to me.

LEWIS G. HUNTER, 723 East 35th St., Tacoma, Wash.

It is Different Now

For the last 28 years I have written marches and other compositions. They have been played by the best professional musicians and I have had the pleasure of hearing them over the radio, but with that uncertain feeling—"I wonder what a first-class arranger thinks of the arrangement." Now I can arrange a melody that will stand criticism. Your Harmony and Composition Course has given me that thorough training I needed. I recommend yours as an outstanding school of music.

MR. CHARLES FREMLING, Band & Orchestra Director, Buhl, Minn.

Use Lists of Teachers

The Normal Piano and Harmony Courses which I have taken are the best that could be procured. They are making me an authority, as for before I felt just half way sure of myself. You should use lists of teachers in the various States and show them what your courses are. Every teacher needs them.

MR. CLAUDE C. BRANT, 198 Butler Court, Akron, Ohio.

Violin Teacher Increased Size of Class

This will acknowledge my Harmony Diploma. At the commencement of my studies with you, I was a violin teacher with plenty of time on my hands. My class has grown to three times that size. I command an increased fee and have a waiting list.

SAMUEL GRIFFITHS, New Bedford, Mass.

Has Diploma Endorsed by Secretary of State

Thank you for the diploma. It was immediately endorsed by the Secretary of the State of Illinois. I have taught for six years before studying with your school, but had not found a good systematic course to follow. Your course has solved my problem.

BERTHA GUERRERO DE RAUDALES,
38 S. Dearborn St., No. 1438, Chicago, Ill.

These teachers and thousands of others testify for the Courses we offer. Your experience should be the same as theirs. You do not have to give up your class and go away from home for an expensive summer term. Through our Extension Courses, you can get new ideas and inspiration for your classes by remaining at home. The cost is less and you benefit greatly.

Don't merely WISH for a larger class and for greater financial gain—but resolve today to make the moments count which so often go to waste. For 23 years we have furnished teachers with preparation which enabled them to earn more. The details of the Course with sample lessons will be sent you for the asking.

Check the coupon and get it in the first mail. Write a letter about your own problems—prehaps we can help you solve them.

"LEADERS" IN MUSIC PUBLICATIONS EACH AN OUTSTANDING SUCCESS IN ITS CLASSIFICATION

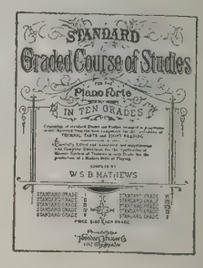
OVER 10,150,000 COPIES REPRESENT THE ENORMOUS SALE OF THESE WORKS

SCHOOL FOR THE PIANOFORTE

IN THREE VOLUMES BY THEO. PRESSER

Volume Two STUDENT'S BOOK | Volume One BEGINNER'S BOOK Price, $1.00 each | Volume Three PLAYER'S BOOK

The Most Popular of All Modern Instruction Works for the Piano



"Beginner's Book" is a veritable "first reader" for the piano. Thousands of teachers enthusiastically state that it is the best of elementary instruction books for young students. "Student's Book" and "Player's Book" are also very popular because of their value as educational works covering the stages following the "Beginner's Book." Throughout this school the material is attractive and pleasing and the teacher is enabled to achieve speedy results in a thorough manner.

STANDARD GRADED COURSE *of* STUDIES

FOR THE PIANOFORTE
In Ten Grades—Ten Volumes

By W. S. B. Mathews Price, $1.00

An Unequaled Educational Work for Piano

This is a complete, progressive series of the indispensable studies for the piano from the very beginning to the highest grade. It is a convenience to teachers and a great advantage to pupils. Except for young pupils, study can be started with the first book. Where the pupil is young, however, it is well to lead up to this course with the "Beginner's Book."

SUCCESSFUL TEACHING WORKS FOR VARIOUS GRADES of INSTRUCTION

TOUCH AND TECHNIC—By Dr. Wm. Mason—In Four Parts - $1.00 ea.
One of the most remarkable works in the entire range of piano pedagogy. A school for artistic piano playing highly endorsed by Paderewski, Joseffy, Gabrillowitsch, Liszt and others.

MASTERING THE SCALES AND ARPEGGIOS—By J. F. Cooke - Pr., $1.50
Scale study from the beginning to the highest degree of proficiency.

SELECTED CZERNY STUDIES—By Emil Liebling—In Three Volumes - $1.00 ea.
Extensively used because these volumes give the best of Czerny's wonderfully helpful studies arranged in progressive order. The editing, fingering and annotating are masterly.

COMPLETE SCHOOL OF TECHNIC—By I. Philipp - - Pr., $2.00
A compendium of modern technic. Excellent daily practice material.

NOTE SPELLING BOOK—By Adele Sutor - - - Pr., 50c
An unusually successful work. The young student is instructed in notation in an entertaining manner.

FIRST GRADE STUDIES—By L. A. Bugbee - - - Pr., $1.00
Exceptionally attractive material for use after the first few rudimentary lessons.

ADULT BEGINNER'S BOOK—By C. I. Norcross - - - Pr., $1.75
These are "suggestive studies for music lovers." An excellent manual for the intellectually matured piano student.

A FEW "SUCCESSES" IN "SHEET" MUSIC PUBLICATIONS

PIANO	Gr.	Pr.	VOCAL		Pr.
Melody of Love, *Engelmann*	3	.50	By the Waters of Minnetonka, *Lieurance*	(2 keys)	.60
Airy Fairies, *Spaulding*	1	.30	Ol' Car'lina, *James Francis Cooke*		.60
In the Arena, March, *Engelmann*	3	.30	Gipsy Trail, *Tod Galloway*	(2 keys)	.60
No Surrender, March, *Morrison*	3	.40	I Heard the Voice of Jesus Say, *Rathbun*	(2 keys)	.40
Keeping Step With the Union, March, *Sousa*	4	.50	Sweet Miss Mary, *Neidlinger*	(2 keys)	.60
Dance of the Winds, *Peabody*	7	.75	Jean, *Burleigh*	(3 keys)	.60
American Indian Rhapsody, *Orem*	8	1.00	Sleepy Hollow Tune, *Kountz*	(2 keys)	.45

Standard History of Music

BY JAMES FRANCIS COOKE PRICE $1.50

A History that Has Pleased Thousands
So Clear that a Child Can Understand Every Word
So Absorbing that Adults Are Charmed With It

Music lovers are here supplied with interesting reading and the music student is supplied with forty story lessons in music lore. The illustrations alone are of a most interesting character and number over 150. All difficult words are "self-pronounced." Bound in cloth, stamped in gold.

Harmony Book for Beginners

BY PRESTON WARE OREM PRICE $1.25

Teachers Achieve Speedy Results With This Harmony Book. Also the Best and Most Practical Work for Self-Study in Harmony

An unequaled "success". The main essentials of harmony are made understandable in a clear, concise manner and everything is presented simply, yet in an engaging manner. A work that lays a strong foundation for future musicianship. Flexible cloth binding.

Helpful, Economical and Convenient Service to Teachers

The Task of Securing the Best Publications for Teaching Purposes is Not a Difficult One for the Teacher Taking Advantage of the Liberal Examination Privileges of the Presser "On Sale" Plan. Decide on Material Tried in Your Own Studio.

Thousands of Teachers of All Branches—Piano, Voice, Organ, Violin, Theory and Other Branches—Have Found the "On Sale" Plan, Promptness and the Other Features Make

PRESSER'S MAIL ORDER SERVICE THE MOST CONVENIENT AND MOST ECONOMICAL METHOD OF SECURING NECESSARY MATERIALS

Details of the "On Sale" Plan as Well as Graded and Classified Catalogs on Any Branch Desired Will Be Furnished Cheerfully on Request

THE ETUDE

AUGUST, 1926 | Single Copies 25 Cents | VOL. XLIV, No. 8

The Jazzomaniac and Her Victim

"Why have the words Jazz and Jagg the same meaning?" asks the humorist.

"Because they are both an irregular, jerky movement from bar to bar," chortles the joker.

The world has been passing through a kind of musical jambouree. Jazz, with all its symptoms, was literally a species of musical intoxication. Starting in America, it spread over all the globe. Out of the *mêlée* came a few minds which had been trained in the better schools of music. With great ingenuity, Whiteman, Gershwin, Lopez, Lange, and others, modified and beautified the Jazz orchestra until the results were often surprisingly interesting. Thus we believe that Jazz, like new wine, is purifying itself.

That it will unquestionably have a bearing upon American music of the future is generally conceded. How could it be otherwise? The ears of our children have been filled to the brim with these inebriating rhythms, for years. When maturity and training of the right kind is given to these youngsters the "pep" of Jazz will still remain in their subconscious minds. Like the voice of an epoch it will appear in its proper way and in its proper place and at the proper time.

The old Jazz of the screeching Jazzomaniac will not torture victims much longer. Our sympathies go out to the old gentleman on the cover of this month's issue. He is merely one of the thousands of parents who have invested in a musical education for daughters only to hear as a result the abominations of Jazz. Now that the fashion for Jazz is passing and better music taking its place, we may look forward to a time when our aural tympani will not be shattered by a pandemonium of horrible noises.

Why Some Teachers Get Ahead

The reason why some music teachers get ahead and others do not is often a matter of business methods.

Good methods never made a poor music teacher a good music teacher; but many a very fine music teacher has been a "failure" in the worldly sense, largely because of the neglect to observe certain very simple and necessary business customs.

This is partly due to the attitude of the teacher in looking upon business with a kind of lofty disdain which seems to disregard the very obvious fact that if it were not for the necessary business machinery of the world art could not exist. This is an absurd and shameful pose which the great and sincere artists of the world are too broadminded to affect.

It is also partly due to habits of irregularity which the nose-lofty musical *poseur* cultivates in order to enjoy a kind of indolence all too welcome.

Business is promoted by diligence, system, attention to detail, and contact with the great world which needs the services or product of the worker, whether these services be blacking shoes or playing fugues, or whether the product be pop-corn balls or nocturnes.

In making this contact the music teacher must:

1. Plan to get patrons by systematic effort.
2. Keep accurate records of work accomplished.
3. Effectively demonstrate ability.

It makes little difference whether your canvass is by personal acquaintance or through printer's ink, in order to divert music teaching patronage your way your advertising should be regular and systematic throughout the year. Every month your patrons should have an opportunity to become acquainted with your progress.

Just at this time of the year the teacher should "work like a Trojan" through circulars or correspondence in interesting patrons for the coming season. It is all very simple. The more people you keep legitimately interested in your ability to render a service to them—a service that will bring beautiful, necessary and interesting things to their lives—the more profitable will be your coming year.

Do not, however, let it go at that. Strive to organize a system so that *every week* next year your patrons will be able to keep in touch with your work. Thousands of teachers have been removed from the worry of "a bad season" through attention to this all-important matter.

Our Pioneers

If there is one thing for which American musical education deserves distinction it is for the labors of our pioneers, the men who blazed the way far out on the prairies of the art in America.

Starting with the ridiculous William Billings, and followed by Francis Hopkinson, Lowell Mason and others of their ilk in the last century, America produced men and women who at least were American enough to think for themselves in Yankee fashion rather than according to models set for them by European musicians who, however great, could never foresee the problems of the New World.

Thus we find in the musical educational creations of William Mason, Stephen Emery, William Sherwood, E. M. Bowman and Theodore Presser, the real spirit of invention sired by experience and mothered by necessity. These men, and others of their kind, understood what was wanted in the New World, precisely as such writers and critics as Dwight, Krehbiel, Elson and Huneker knew what America ought to have in musical criticism.

What is the new generation producing? In the field of writing for the musical press we often notice a pathetic lack of the pioneer spirit among the younger writers. They are only too ready to accept the paradigms of the European masters and make little effort to do anything resembling original thinking.

The field of pedagogy in the study of the piano is by no means fully explored. There are always new angles, new helps, new devices, which an active, well-trained mind can evolve. The Etude is hunting for such material and is always ready to encourage young writers who have something in addition to mere words to sell. The great musical public, always eager to learn how to do things in a little better, little easier, more effective manner, is looking for real ideas, not mere adjectives.

Keys

The late Victor Herbert, whose wit was as truly Irish as was his delicious brogue, once said to the editor, in speaking of one of his English contemporary composers of light opera:

"Oh, that's the fellow who always writes in the key of G, and when he doesn't write in the key of G it sounds like the key of G, anyhow."

Many composers have been very sensitive to keys. Berlioz had most positive ideas as to the effect of different tonalities. In his "Treatise on Instrumentation and Orchestration," he characterizes the *timbre* of the various keys as follows:

MAJOR		MINOR	
C	Grave, but dull and vague.	C	Gloomy; not very sonorous.
C♯	Less vague and more elegant.	C♯	Tragic, sonorous, elegant.
D♭	Majestic.	D♭	Serious; not very sonorous.
D♮	Gay, noisy, and rather commonplace.	D♮	Lugubrious; sonorous; somewhat commonplace.
D♯	Dull.	D♯	Dull.

E♭	Majestic; tolerably sonorous; soft, grave.	E♭	Very vague, and very mournful.
E♮	Brilliant, pompous, noble.	E♮	Screamy, and slightly commonplace.
F♭	(nil)	F♭	(nil)
F♮	Energetic, vigorous.	F♮	Not very sonorous; gloomy; violent.
F♯	Brilliant, incisive.	F♯	Tragic, sonorous, incisive.
G♭	Less brilliant, more tender.	G♭	(nil.)
G♮	Rather gay, and slightly commonplace.	G♮	Melancholy; tolerably sonorous; soft.
G♯	Dull; but noble.	G♯	Not very sonorous; mournful; elegant.
A♭	Soft, veiled, very noble.	A♭	Very dull and mournful, but noble.
A♮	Brilliant, elegant, joyous.	A♮	Tolerably sonorous; soft, mournful, rather noble
A♯	(nil.)	A♯	(nil.)
B♭	Noble, but without distinction.	B♭	Gloomy, dull, hoarse, but noble.
B♮	Noble, sonorous, radiant.	B♮	Very sonorous; wild, rough, ominous, violent.
C♭	Noble, but not very sonorous.	C♭	(nil.)

The distinguished pianist, Wilhelm Bachaus, while on a visit to the home of the editor said that he had always been singularly attracted to the key of C-sharp minor. In fact, on his coming tour of Australia, he is to give a concert composed entirely of compositions in that key. While the key is considered by many as an exceedingly difficult one to play, Mr. Bachaus points out that many of the most popular works have been written in that key, citing the famous *Nocturne* of Chopin, the *Fantasie-Impromptu* of Chopin, the *Prelude* of Rachmaninoff, the so-called "*Moonlight Sonata*" of Beethoven, the Brahms *Intermezzo, Opus 117, No. 3*, and many others. He also points out that for some inexplicable reason a program of compositions in C-sharp minor does not seem to cloy as does a program of compositions written in any other one key.

Individualism in Music Study

Dr. Charles Eliot, who in the very heart of scholastic conservatism, Harvard University, became more iconoclastic than any of the "saner" university presidents of his day, everlastingly assailed the "lock-step" methods once so prevalent in education.

Students of other days were promoted or demoted largely because of their ability or inability to march ahead in "lock-step" with their companions. Like the zebra-clad inmates of penal institutions, the students who did not keep precise step were accordingly punished.

The result was of course that some of the weaker students were spurred on to the common level of achievement. The brilliant students were accordingly held back to this form. The tendency was toward mediocrity. On the whole, "lock-step" systems seem to raise the general standard of the group as a whole and harass real talent and genius.

Every music teacher knows that certain things can be accomplished in a quite remarkable way in classes, but only up to a certain point.

There are certain music students who are born individualists. They are stifled by systems and class methods. Usually the great things, in art particularly, are accomplished by individualists. The individualists are the precious chalices of initiative and originality.

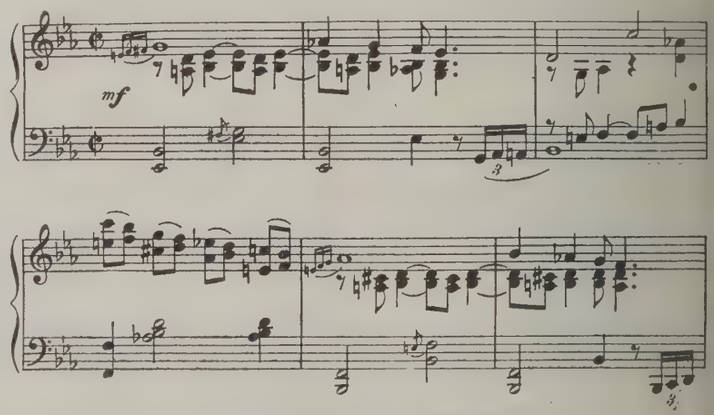
Dyed in the wool pedants are notoriously blind to the native abilities of the individualist. Chopin, Wagner, Moussorgsky, Verdi, Schumann, Stravinsky, all suffered in their time, from restrictions which the "lock-step" specialists would have placed upon them.

The best conservatories and the best colleges are those directed by broad-gage men and women with the ability to identify the individualist and understandingly assist him to the development of his precious gifts. The importance of the private teacher lies in his care of the individualist.

Question: How many royal talents have been exiled to the Siberia of oblivion by the old-fashioned "lock-step" methods of education?

Marche Funebre

King Jazz is dying! His syncopating majesty, brothel-born, war-fattened, noise-drunk, is now in a stage of hectic decline. Like many of the great frauds of the centuries, he has reigned long and not without some good end.



King Jazz has brought a certain kind of dash and swing to American music and to the music of the world, that might not have come in any other way. In itself, his potentiality was thoroughly temporal. Despite all the bang and smash, Jazz could never have the longevity of the most trivial rondos of Haydn, for instance; because the music for the most part was built upon an entirely artificial basis. The virile Marches of Sousa not only have lived for years, but many of them are also more popular to-day in all parts of the world than when they were first published. What Jazz pieces can you recount that have lived more than a few months—two years at the most? Jazz is a perversion of some of the remarkable syncopating rhythms to be found in the native music of many races. The negro race contributed some, but it is a libel upon our colored brethren to lay the musical crime of Jazz to them.

The novelties introduced in Jazz orchestrations, on the other hand, have already contributed a vast number of interesting colors to the palettes of the serious composers. King Jazz in his death throes may be proud of this legacy to the art that he loved to desecrate.

His Majesty's music was one of unnatural noises, cat-calls, explosions, and often the vicious mangling of beautiful classics. Small wonder that he already has abdicated in favor of better music composed by writers with at least some semblance of a real musical training. After all, the *Bier Stube* is not a conservatory.

The dear old gentleman on the cover of The Etude will not be obliged much longer to endure musical paralysis when daughter plays the piano. Daughter has come to realize that Jazz is no longer "fashionable."

Here, then, is the *Marche Funèbre*—Moan, ye Saxophones! Blare Trumpets! Twang Banjos! Shriek Piccolos! Bang Cymbals!—the last steps in the cortege of King Jazz, emperor of the lobster palaces and night clubs of gluttony, boot-legging and whilom vice on the great white ways of the civilization that followed in the wake of the World War.

The Music Mart

There is a caustic school of would-be composers who look down upon any kind of composition for which there happens to be a commercial demand.

If the great world at large were to be run in that way, life would certainly cease in a very short time. The only things which nature produces, for which there is no demand, are pests, the very existence of which is hard to explain.

There is no demand for mosquitoes, for flies, for poison ivy, for mad dogs, for befouled springs, but because they are not popular does not imply that they should be extolled as great works of art.

Many of the greatest pieces of music ever written are the most popular; and moreover they bring a high value in the music mart. Some day we propose to say something about some principles which seem to make certain kinds of music popular.

Chronological Progress in Musical Art

An Interview Secured for THE ETUDE With the Noted Composer

IGOR FEDOROVITCH STRAVINSKY

Biographical

Fedorovitch Stravinsky was born at Ora-m, near Petrograd, June 17, 1882. Very n life he manifested extraordinary ability piano. His father planned to have him a lawyer, and preparations were made for reer. The young Stravinsky, however, met y-Korsakoff and became so interested in that he determined to abandon law. He l composition privately with the great Rus-aster for four years. During that time it eported that Rimsky-Korsakoff said that ther of his pupils brought him such dis-tinctive works. In 1908 Siloti produced his Scherzo Fantastique, which immediately attracted the attention of Sergei Diagilev, the director of the famous Russian Ballet, which startled America with its freshness and beauty a few years ago. Diagilev gave the young Stravinsky a commission to write the music for the ballet "L'Oisseau de Feu" (Bird of Fire). In Paris he was instantly identified as a genius. Many other ballets, orchestral compositions and operas followed. His music is so revolutionary that it is almost impossible to make any comparison with that of the works of other composers. Futuristic in the extreme, his orchestral scores have met with unusual appreciation. One famous orchestral director of America has gone so far as to make the statement that Stravinsky is the foremost of all living composers. His concerto, which is now familiar to American pianists through the artist's own interpretations, has attracted wide attention because of the composer's treatment of the piano as a percussion instrument. Stravinsky has brought a new flavor and zest to the whole art of musical composition of his day and generation.

N CONSIDERING the possibilities of the piano-forte as a musical instrument in connection with the composition of my concerto, I was confronted with the fact that the treatment of the ent by the composers of the nineteenth century o appeal to me whatever in the sense in which I to employ it. The composer has a definite obli- to his art which is destroyed if he is fettered by ions. Consider for instance, the piano music of eteenth century. Is it not a very different music nat of the earlier composers for the instrument? e composers felt the necessity for reaching out to lds, why should not the composers of to-day. If nn had held to the conventions of Scarlatti, there nave been no Schumann as we know him.

its orchestral employment, the piano appears to a wonderful percussion instrument. The piano own individuality and its own significance. Like it is subject to a chronological development. In it the piano has been treated at times as though an orchestra, at times as though it were a vocal ent—that is it was made to "sing," in fact it eated out of everything but its own very evident lividual character as a percussion instrument. The as its own melodies and its own harmonies. They ally different from those of the violin for instance. to imitate the violin, the flute, the 'cello, the bas- any other instrument on the piano, is an error or which it is high time to atone.

s concept of the piano seemed to be developing mind for a long time like a great tree. During t year, it bore its fruit in my concerto. I have ored to restore the piano to its rightful place as a ion instrument.

Artistic Visions

VERY composer must see and hear his artistic visions with his own eyes. Chopin, for instance, is piano in a totally different manner from that in I see it. Through the better part of his life he melodies for the piano which could be played by nstruments and even sung by the voice with quite at facility. Yet Chopin is known pre-eminently composer for the piano. Please do not think that ot admire his works enthusiastically. It is merely e had other gods than mine. Aesthetically, he be- to another age. Chopin is not my musical god. higher honor and admiration for the great Liszt, immense talent in composition is often underrated. do not go for my gods to Liszt, nor to the nine- century, but rather way back to John Sebastian whose universal mind and enormous grasp upon il art has never been transcended. One must go door of Bach and knock if you would see my l god.

m sure that the native ear, that is the ear undis- by musical convention, will find in the music that composing new auditory suggestions of my great f the master of Eisenach. Possibly a badly trained ght say that it is a caricature of Bach. Yet I am ced that in Bach the composers of future will find se inspiration. There is an organic character to ad and rich art that carries with it not only the e of immortality but also a kind of ever vernal ter. Unlike the music of many of his contempo- it can never grow old.

se who see in my music a caricature of Bach are mind greatly in error. My works have always ontrapuntal in character, but now they are even o, more melodic and less harmonic in type. But

IGOR FEDOROVITCH STRAVINSKY

this does not mean that I have sought to caricature the polyphonic writers of the sixteenth and seventeenth centuries. But we must realize that the polyphony of to-day should be differently employed from that of the polyphony of other days. Consider the difference in the speech of the Elizabethan period in England or the France of Racine, from that of today.

"Some critics have even gone so far as to ask, "What would Bach say if he heard your compositions?" I can only reply that Bach would unquestionably be astonished, he would be amazed. But it is only fair to ask at the same time what Bach would think and say if he were to be transported to a modern American city so utterly different from the quiet Thuringian village of Eisenach. What would he say to all that he saw and heard in the streets, the tall buildings, the electric cars, the subways, the radio. He would probably think that he had stepped out in an insane asylum filled with crazy people running hither and thither.

"Therefore in my music, particularly in my concerto I have endeavored to catch the note of our marvelous present, not the remote past. We do not live in the past, we live in the present. We must realize the necessity for feeling the inspiration of the tremendous things that are going on about us all the time. I feel this modernity very deeply. More than this, I find in it musical forms which interest me tremendously. America, with its gigantic growth, inspires me. The American people expend enormous sums for music. However, it is not this about America that interests me most but rather the fact that there is no premium on laziness in America. Everybody works. The possession of huge wealth does not exempt the owner from work, if he desires to retain the respect of the people. The tempo of America is greater than the rest of the world. It moves at a wonderfully swift pace It all appeals to me.

"In my own musical training I had the advantage of studying with Rimsky-Korsakoff. He was a very remarkable teacher, exceedingly careful and particular. He was very wise and very witty. When he made a remark, it was made in such a way that it was hard to forget. One thing his pupils well remember and that is that he made no complimentary remarks. The pupil who expected pats upon the back would have been disappointed with Rimsky-Korsakoff. On the contrary, he could be unrelentingly severe in his criticism I did not study with the master at the Conservatory, but privately; because the formal life of the conservatory would have been abhorrent to me.

"As for my training in piano, I am largely self-taught. I was devoted to Bach and studied his piano works indefatigably. I also worked very hard with the works of Czerny for whom I have very great admiration. He was a wonderful fellow and many of his compositions are invaluable in forming a good pianistic education. He had a great temperament and possibly did more for pianistic training than any other teacher of his time or since.

The Supremacy of Bach

"THE WORKS of the early English writers for keyed instruments such as Byrd, Bull, Gibbons, Purcell, made an immense appeal to me because of their freshness and originality. Handel seemed exceedingly dull to me in comparison with Bach. Handel was a schoolmaster. Bach, on the other hand, was a real creator in the same immortal sense that Rafael, Goethe and Brahms were creators. His resources seemed infinite. His art reached out in all directions. During the past year, I was in Switzerland and played my concerto in several different cities. While there a friend asked me if I had heard the famous guitarist, de Segovia. I replied in the negative. "You must hear him,," he answered. "Segovia's playing is a treat." He came and played part of what is known as the Sonata for violin solo. Schumann, as you probably recollect, wrote a dull accompaniment for these works. Much to my surprise, I learned from de Segovia that Bach wrote these sonatas originally for the guitar and not for the violin. I cite this largely to show the many ramifications of the art of Bach which seems to reach out in all directions. So great is this accomplishment of one man that it is impossible to concede that one is well educated musically who has not studied Bach very thoroughly indeed.

Studies in Interpreted Composition

"DURING the past six years I have given very close attention to a phase of musical development which has interested me intensely. This is the making of records for the piano. Making records to me does not by any means refer merely to the process of playing them. Of course the piano, which is the most generally used musical instrument, will always retain its position as a kind of door to musical education. It will continue to be played and studied indefinitely. However, the instrument has other possibilities than those confined to the fingers. These have been made accessible through the marvelous developments in the piano playing machines, so that the composer can now take records and add all necessary additional notes that could not possibly be played with ten fingers of any one player. More than this, he can so introduce these notes from the standpoint of rhythm, pedaling, touch and dynamics that he creates something quite new in musical art. In other

words, these wonderful mechanical inventions are merely carrying out the possibilities of the piano which, in itself, is really a music machine with a very great number of coördinated parts. The piano-playing machines enable me to 'orchestrate' for the piano. That is, I can take apart and study a work, not merely as the composer puts it down upon paper, but I can secure the nuances and the rhythms and the climaxes—everything. This is done by cutting the paper rolls. An infinite number of trials are made before the right artistic result is attained. Imagine what this means to the composer! Heretofore he has been largely dependent upon the whims of this or that interpreter. This is fortunate, in some ways, because a variety of interpretations must add to the spice of life. Yet, what about the conception of the work which was in the mind of the creator? Surely this deserves to be considered and preserved.

Musical Etchings

"There should be no thought that these machines are mechanical in the sense of being hard or angular. Quite the contrary is true. In making a record in the newer sense, which I have described, I feel that I have my soul in my hands. The result is not like a photograph, in which the camera makes a negative that may or may not be touched up by the photographer, but which is always a mechanical result as compared with an oil painting. The results I seek are those of the lithograph or fine etching, in which the artist has completed his work upon the original plate. It is the work of his own hands. Only the process of multiplication of the lithograph or etching is mechanical.

"Most of the records I have made could not be played by hand. If it were not for this wonderful producing machine, this phase of my art would be lost. The machine is a practical way of preserving this. It is a different art from that of the playing of other days. One cannot compare the art of the racing chauffeur to that of the art of driving a coach. They are two entirely separate and different things. Entirely too little importance is laid upon the composer's ideas in playing his works. I have refused to have my concerto played by others at the outstart, because I have been confident that no one would know just the artistic effects which I have sought. It is better not to have it played in public by others until the composer has been given an opportunity to make his own ideals and artistic aims known to the public."

Self-Test Questions Upon Mr. Stravinsky's Conference

1. What orchestral employment does Stravinsky make of the piano?

2. Is it desirable to try to imitate other instruments upon the piano?

3. Tell something of the teaching of Rimsky-Korsakoff.

4. What did J. S. Bach write for the guitar?

5. What is the real usefulness of piano playing machines?

Backing Up

By Corona Remington

Two things I have learned in my piano practice that have helped me very much. In mastering new daily exercises, such as Hanon and Czerny, I try to learn one new exercise a day, but formerly found that by the time I had played through all of the old ones and had come to the new one in its consecutive order, my mind and fingers were too fatigued to spend the required time and concentration in mastering it. Now I start with the new one and travel backwards through the book. In this way I am fresh and interested in the new exercise and often play it five or ten times before going on to the next one; whereas, before, I was tired and a little bored and only wanted to finish and get to my "pieces." Thus the exercises grow easier and require less effort as I grow more fatigued. This may be "backing up," but it certainly is effective.

Another trick is studying exercises that contain difficulties similar to the ones in the composition I am working on at the time. If it contains trills I work on trills exercises—octaves, sixths, thirds; what not. In this way I do not have to put such endless labor on the piece itself and thereby avoid the danger of going stale on it or playing it to death in the hope of overcoming certain technical difficulties.

"Music is not an entertainment, an accomplishment, a side-show. It is as necessary for the people to have music as they march toward their civic and national goals as it is for an army to have bands or to chant folk-hymns on its way to battle." —CRANE.

Beethoven's Literary Education

By A. Eaglefield Hull

WAS Beethoven possessed of good literary taste? Romain Rolland ("Life of Beethoven," Kegan Paul, 1918) thinks it was remarkable that Beethoven's taste in literature was so sound, in view of his neglected education. By education, I suppose Rolland meant school attendance and private tuition. This was partly atoned for by his intercourse with Breuning family at Bonn (and later). Frau Breuning took a special interest in young Ludwig and watched his mental development as carefully as she did that of her own son and daughter. In the Breuning home, the principal reading was confined to Lessing, Burger, Wieland and Klopstock. The last named (the German Milton) was Beethoven's constant companion in his country rambles. Later in life he loved chiefly Goethe, Homer, Plutarch and Shakespeare. Of Homer's works, he preferred the "Odyssey" and the "Iliad." He was continually reading Shakespeare (in a German translation), and we know with what tragic grandeur he has set "Coriolanus" to music. He read Plutarch's "Lives" frequently, as did all who favored the French Revolution. Brutus was his hero: he had a statuette of him in his bedroom. He loved Plato, and dreamt of establishing his Republic in the whole world. "Socrates and Jesus have been my models" he wrote in one of his notebooks (1819-20).

Still, on the whole, I think Beethoven can hardly be added to the small list of composers who may be regarded as sound literary critics. The composer's mentality is not, as a rule, of the order which can appreciate the fine niceties of language and poetic metre. Beethoven's vague reply that the clue to the wayward D Minor Sonata (Op. 62) could be found in Shakespeare's "Tempest" is a case in point. This sonata is a tragedy; the "Tempest" is comedy. One might well say that all Beethoven's thoughts on literature were musical and broad, loose and hazy. Certainly his random reading influenced his music; but he had only this use for it. Such a man could not possibly be a great writer of songs or even of vocal music. We cannot argue much from the fact that Goethe was his prime favorite: no one living at that period could possibly escape being caught in the floods of admiration which flowed round the great man of Weimar. Beethoven could no more ignore Goethe than an Engish composer could ignore Shakespeare.

How did the two great men get on together? Beethoven admired the genius of Goethe deeply. "Goethe's poems give me great happiness," he wrote to Bettina Brentano on February 19th, 1811; and also "Goethe and Schiller are my favorite poets, together with Ossian and Homer, whom, unfortunately, I can only read in translations." He used to say that Goethe's poems exercised a great sway over him, not only by their meaning but by their rhythm also: their language urged him on to composition. But the composer's character was too free and uncouth for the personal liking of the poet, "bear" though he too was often called. Beethoven himself tells us of a walk they took together, when they met at a Bohemian spa, Töplitz.

"Kings and princes can easily make professo privy councillors; they can bestow titles and deco but they cannot make great men or minds wh above the base turmoil of this world....When t like Goethe and myself are together, these fine ge must be made to feel the difference between oursel them. Yesterday, as we were returning home we met the whole of the Imperial family. We sa approaching from a distance. Goethe let go my take his stand by the road-side with the crowd. It vain that I talked to him. Say what I would, not get him to move a single step. I drew my ha upon my head, buttoned up my overcoat, and for way through the throng. Princes and courtiers aside. Duke Rudolph raised his hat to me, the E bowing first. The great people of the earth kn and recognize me. I amused myself in watching t cession pass by Goethe. He remained on the roa bowing low, hat in hand. I took him to task for it severely and did not spare him at all."

Nor did Goethe forget the scene. Goethe said to

"Beethoven is, unfortunately, possessed of a wi couth disposition. Doubtless, he is not wrong in the world detestable; but that is not the way to m pleasant for himself or for others. We must excu pity him, for he is deaf."

After that, Goethe did nothing against Beethove did he do anything for him; he ignored him com At the bottom, however, he admired Beethoven's and feared it also. He was afraid it would cause lose that mental calm which he had gained throu much trouble.

A letter of young Felix Mendelssohn, who through Weimar in 1830, gives us a very inte glimpse into the depths of Goethe's storm-tossed p ate soul, controlled as it was by a masterly and po intellect. Mendelssohn writes:—

". . . And first he did not want to hear Beeth name mentioned; but after a time he was persua listen to the first movement of the symphony in C which moved him deeply. He would not show an outwardly, but merely remarked to me, 'That do touch me; it only surprises me.' After a time he sa is really grand, it is maddening; you would thi house was crumbling to pieces.' Afterwards, at Goethe sat pensive and absorbed, until he began to qu me about Beethoven's music. I saw quite clearly deep impression had been made on him."

Even the whole-hearted admirer of Goethe, Betti Arnim, who visited Beethoven in 1812, writes to about the composer:—

"When I saw him for the first time, the whole ex world vanished from me. Beethoven made me forg world, and even you, O Goethe....I do not think wrong in saying this man is very far ahead of m civilization."—*Musical Opinion (London).*

"I Will"

By Joseph L. Galton

How much can you put behind those words, "I WILL?"

That is one of the most serious questions of the music student, at the beginning of the season.

Think what Beethoven, Wellington, Sir Christopher Wren, Benjamin Franklin, Wagner, Lincoln, Edison and Roosevelt put behind them.

"I Will" is the engine which supplies the power for your success, whether your ambition be to play a "Mendelssohn "Song without Words" or to write a great symphony.

The will is called the executive faculty of the soul.

It is the "I Will" in you which determines
—how hard you work at the keyboard
—how long you work at the keyboard
—how carefully you work at the keyboard.

Make a little sign, "I Will," and put it on your music rack. This sign has been the ticket which has carried thousands to success. The journey may be long and rough, but with that ticket in your hand you need not stop until you have everything you want in this world that your talents and work entitle you to have.

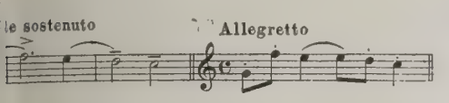
The writer once had a pupil who could play the Concerto with comparative ease, from memory. denly she commenced to stumble here and there. practiced even harder to make up for these irri lapses of memory. The condition grew worse. Sh instructed to let the concerto strictly alone for months and practice upon other works. This sh and at the end of three months she attempted to pl concerto again and went through it flawlessly, w any recourse to the notes.

Those who know the human mind best stand i ceasing awe over its complexities. These memory g however, have been valuable to the writer in study:

1. Don't fuss about your memory. Work st and systematically with the idea of remembering wi effort or pressure.

2. On the other hand, don't be too indulgent. you cannot remember, rest a little and then try until you are convinced that effort for the time bei fruitless.

3. Do a little memorizing every day.



The Series of Analytical Articles upon the Beethoven Sonatas, by Professor Frede Corder of the Royal Academy of Music of London, will be resumed in Septem

sical Fundamentals Which Every Student Should Know

By J. ARKO MENDELSOHN

ORE proceeding with the consideration of the eaning of elemental musical formations, I beg ave for a short but necessary explanation.

As in life all forms, however complicated, are l all these innumerable units again are united other and finally form the universe, so is it and art. For instance, we cannot understand without physiology, biology, chemistry, physics, ; and again, within the realm of anatomy we derstand the function, for instance, of the mus- ut considering bones, ligaments, joints, tendons s. In order to understand the meaning of the formations of the body, we must dissect it; s far as possible divide it into its component he same procedure must be applied to a work d the difficulty in both cases is just to know his separate contemplation of the elemental for- may proceed without regard to the effect of r-relations, that more or less affect and alter inal function and meaning. To give only one there is no melody without rhythm, and a dif- ythmization may change entirely the meaning e-succession, as everyone may perceive at the two phrases,

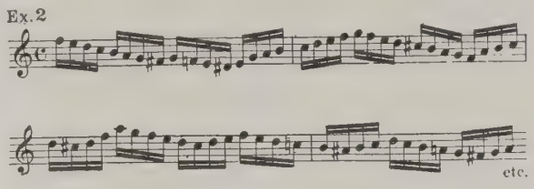
f which suggests a plaintive longing, the second atured raillery; and if we change not only the ition, but the harmonization, again innumerable of meaning may result.

why it was mentioned in the first article that ent musical structures were selected rather at and, indeed, complicated harmonic formations ited there that should have been preceded by mentary ones of intervals, tone succession and

Rhythm

HM by no means belongs exclusively to music. s a property of every art that reveals itself in f poetry, dance, mimicry, as well as of music; in the latter it finds its richest development. in nature the beating of the pulse, rising and f the wave, of the sea in high and low tide, is the sequence of equally or almost equally noments of time, the contrast of pressing and force, expansion, mass. Accordingly in the ork, rhythm announces itself in both its ele- ccession of time (or motion) and stress. Both he measure that is apportioned to each single I tarry as long as the present moment arrests tion, or no other attracts it away from it; I om one moment to the other if my interest ore lively or cursory after the next moment; he greater measure of force (stress, accentua- that moment which is more important to me. ase the rhythm is the expression of the will and of him who forms it; in it we perceive either ower of the artist or his judicious pleasure in a red and gracefully or significantly changing n. In both directions rhythm is a necessity for already in the regular vibrations of the tone it ere, secretly foreshadowed and intimated.

n in music, therefore, comprises the motion of a nposition as well as of its single tones and rests, n measures, and the accentuation of tones.

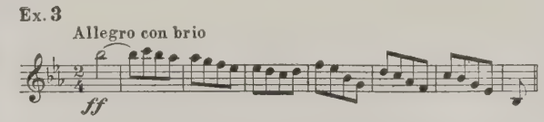


Motion

e one knows the meaning of motion and is ainted with its different qualities: Fleetness, intermittence or stagnation, uniformity, inequal- o on, not only from music, but also from lan- tion, gesture and other human attributes. So ent "Tempi" in music correspond to the livelier r emotion which the composition presupposes s to arouse. Since the emotions themselves, to their nature, have no entirely definite meas- lepend not only on their object but also on the and mood of the person seized by them, and as external incalculable circumstances. One how natural it is that our designations of tempo ot at all indicate an absolute measure of time, and that even the designations of the metronome can pass not as an absolute law, but only as a more exact indication for the execution.

However, if we want to render clear to ourselves the meaning of motion in detail, we must distinguish:

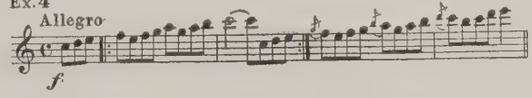
(a) *Motion by itself*—the more fleeting or more moderate passing of a row of tones. Listening, for instance, to an aimless, cursory row of tones,



Ex. 2

we understand that here no single tone is essential, but that the hurried passing through all of them is the sense of the movement, or at least of its rhythmic formation.

(b) *Motion From Out a Fixed Point,* as in the following example (from the first movement of Beethoven's Fifth Symphony),

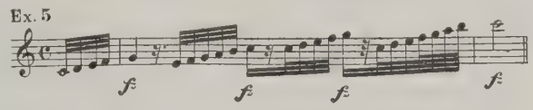


Ex. 3

in which, as it were, the fluttering escaping tones hold on to the fixed one like fluttering colors to the flagstaff when the standard-bearers lead the men into battle.

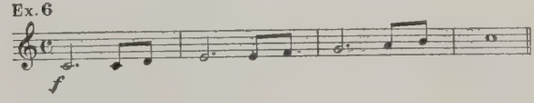
(c) *Motion on to a Fixed Point, to an Aim,* as in the following passage (from the finale of Beethoven's Fifth Symphony),

Ex. 4



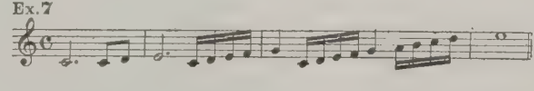
where the aim attracts and draws into itself the surging row of tones, like victory its exultant cheers.

The sense of the last two forms of motion is conditioned by the force, with which one point holds or attracts them, by the force which we express at or in the motion, or by the steadiness of will with which we strive for the goal, either in an uninterrupted or in a hesitating and halting manner.



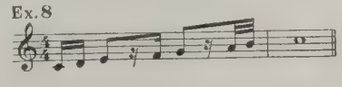
So we see at this swift motion towards a fixed goal,

Ex. 5



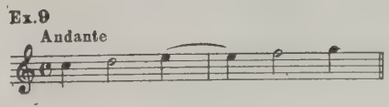
the force of the object tone which drags toward itself so many tones in so swift, uninterrupted succession. Again, a persistently equal and at the same time forceful rhythm lends firmness to a melody:

Ex. 6



A combination of persistency and livelier progression imparts to it animation, ardor, fire:

Ex. 7



while a similar tone succession with a halting rhythm

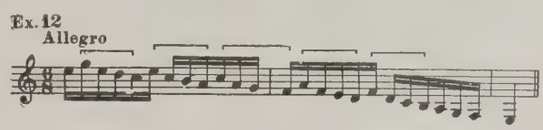
Ex. 8

corresponds again to the sense that lies already in the denomination (halting, hesitating). A like effect is produced in a slow tempo by syncopation, which effaces the impression of measure,

Ex. 9

although in a livelier tempo syncopation appears to express stubbornness or pertness,

Ex. 10



since it wilfully opposes the order of measure. A similar sense of sauciness is the result of the conflict between rhythmical and tonical motive in the following passage of Beethoven's *Eroica*

Ex. 11

where motives of two tones are included in rhythms of three beats (the home-coming soldiers vent their carefree spirits in frivolous songs); while the motives of four tones in rhythms of six beats in the following example (taken from Beethoven's *Sonata,* Op. 27, No. 1)

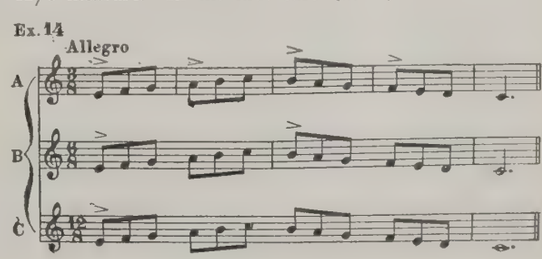
Ex. 12

seem to suggest agitation, induced by joyful expectation or remembrance.

Legato and *staccato* also are rhythmical forms, the first being a more fluent, gentler way to represent connected tones, the second a looser and hence often more piquant manner to execute rows of tones.

Accentuation

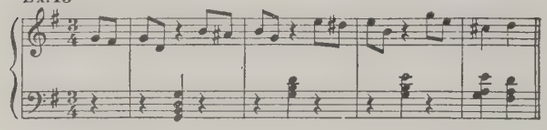
ALTHOUGH accentuation can be achieved in two ways, it has only one aim. What we accentuate we designate as the more important. We do this either by dwelling longer at it, or by imparting to it a greater mass of sound, stress, a stronger tone. Through longer duration and stops the tones E G C, in Example No. 8, are set off already before the others, even without any emphasis. Through emphasis, not only the accent of the stopping can be strengthened (as intimated in Ex. 5 by the *fz*'s), but an entirely different sense be given to one and the same tone succession. So, if we wished to accentuate in No. 2 after the above—or below designated way—



Ex. 13

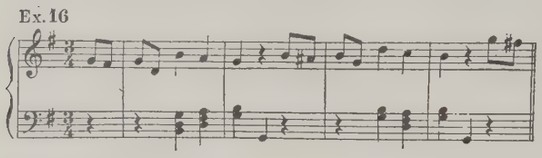
or in a still different manner.

From hence we conceive also the difference of the measures. The less accentuated notes a measure has, the more mobile and fluent it is. Therefore, tripartite measures are lighter and smoother than bipartite, compound lighter than simple. Hence, it is not at all the same, if (for instance) a movement is written in 3/8 or 6/8 or 12/8 measure. In the first case (at A)



Ex. 14

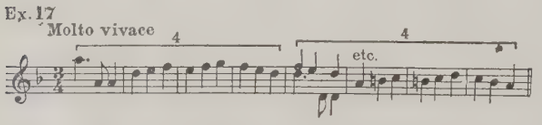
we have four accentuated notes, where in the second (at B) there are only two, and in the third (at C) only one. The last way will thus be the most fluent, the first the most articulate and emphatic.



Single measures of a composition combine to larger rhythmical masses which may follow each other symmetrically or unsymmetrically. In these formations the same sense is manifest as in the measures, only in a freer and richer application. Each section is a whole for itself and, as such, a moment in the whole tone piece. The shorter these moments, the lighter is the pace of the whole, the more easily and fleetly we hasten from one to the other. Thus here,

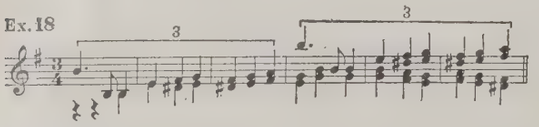
Ex. 15

in a little sentence, which consists of sections of one measure only. The more expanded and comprehensive these moments are, the more steady and satiating becomes the whole. This sentence of rhythms of two measures, formed after the last,



Ex. 16

makes it perceptible at once.



In these larger rhythmical formations a considerably different effect of the numbers two and three is noticeable. Rhythms of two measures, like their number (2) among the divisors, are the simplest and easiest. Those of four measures appear broader and more dignified; but they, too, are comprehensible and calmly flowing, because the number two is felt in them. Rhythms of three measures, on the contrary, seem at once more agitated or violent; their character is so decidedly different that Beethoven, for instance, in one of his greatest works, finds it worth while expressly to call attention to it. In the scherzo of his Ninth Symphony rhythms of four measures prevail—

Ex. 17

and turn later into rhythms of three measures,

Ex. 18

which Beethoven indicates with "Ritmo a tre battute" (rhythm of three beats—namely, measures).

Rhythms of five measures, finally, become broad, pressing, if not dragging, and so forth.

Again, equal or symmetrical sections give the whole a more uniform, comprehensible, calm tenor; changing or even irregular ones bring unrest or inconstancy and finally discomposure into the whole—which may be a mistake, soon striking expression of a passionate, unsteady frame of mind.

The student should habitually practice to recognize the rhythmical order in actual compositions and to feel and perceive its sense, its effect on the whole. The composer should produce all classes of rhythm, in order to imprint into his feeling and consciousness their manifold expression and to accustom himself to characteristic representation. Both—fluent and sharply delineated delivery of the tone rows—must be familiar to him and serve him at the right time. One-sided education affords only the one or the other, the thoroughly educated artist—before all others Glück and Beethoven—is master of both.

"However little any individual may realize it, music, nevertheless, is the common heritage of all humanity, and, as such, it is one of the most potent possible forces for bringing human thought and feeling to a common plane."

—Osbourne G. McConathy.

The Bugaboo of Memorizing

By Patricia Rayburn

Memorizing, that great bugaboo of the music student! Reams have been written on the subject—but here are a few suggestions that will prove helpful:

1. Memorize *thoroughly* every piece you study. The more you memorize, the easier it becomes.

2. When you are ready to begin, go through the selection and note its divisions into natural sections. Every piece of music is made up of repetitions and variations of rarely more than three themes. If you will take careful note of this, your actual work may be cut down from three pages to less than one.

3. Memorize a whole section at a time. Do not waste your energy in learning one small passage after another. Thus you will think of every movement in complete terms and will not be encumbered by a conglomerate patch-work of individual measures and phrases.

4. If memorizing happens to be easy for you, do not fall into that dangerous habit of memorizing through one sense only. Three senses should coöperate—sound, touch and vision. That is, know you are playing correctly by sound, by the positions of your fingers on the keys, and by the mental vision of the forms your fingers take on the keyboard.

5. Once you have memorized a selection, never let it depart to the limbo of lost things. Dig it out, even if it has retreated to the inmost recesses of your mind, and polish it. Before many months you will find that you have gained a very worth while and complete selection of numbers.

The Enthusiastic and Popular Teacher

By Dorothy Bushell

A pupil should be treated as though he were the only member, for the time being, in the teacher's circle. He should be welcomed with a cheery remark or comment on some local, current topic. Every moment of the lesson time should be spent in full concentration on his work. Praise should be given where praise is due in preference to discouraging censure for things undone. Allowances should be made for nervousness and for the difference in touch between the teacher's piano and that on which the pupil has been practicing. By eliminating "nagging" and indifference the music lesson can be made one of the best and pleasantest hours in the pupil's week.

A vital interest in the pupil's practice and progress can be maintained by having him keep a note-book. As he plays his lesson for the week or repeats what theory he has learned, comment can be made in a note-book and the next steps briefly outlined, such as, "Study No. 3 needs more care in the last phrase. Practice slowly, separate hands," and so forth. Underneath these instructions lines can be drawn for date, time and minutes of daily practice. The pupil will clearly realize that the book is for daily use, and will seldom fail to bring his book showing the directions carried out. Also, by referring to weeks gone by and comparing notes with later entries, he is more able to gage his own advancement and will try to make his note-book a visible record of steady progress.

To Keep Up a Repertoire

By Eutoka Hellier Nickelsen

Pupils have come for lessons, giving as their reason for making a change, "My teacher never played for me." Often examination has proven that their instruction has been excellent, but lack of confidence in the teacher's ability to play has caused them to make a change.

The following points are of great service in aiding the instructor to keep up her repertoire:

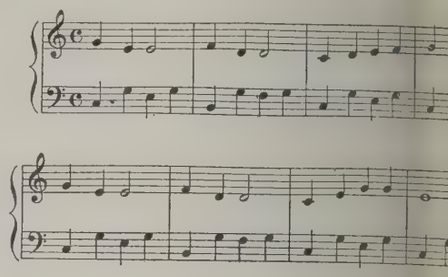
1. Assigning only compositions that she herself can perform in a creditable manner.

2. Playing for the pupil occasionally at the end of a lesson. This likewise is an incentive to further effort in the pupil.

3. Studying "two piano" numbers with more advanced students.

4. Playing alternately arpeggios, scales, and five finger exercises with different pupils.

5. Joining a music club and being willing and prepared to contribute to any musical programs given throughout the year.



Teach by Comparisons

By Robert M. Crooks

A child usually looks upon everything as be cult, as there is so much for his untrained eyes to There are the notes, more than likely in both c time unit which must have its count, and the fi the placing of the fingers. Perhaps, if we could youngster's mind we should find in it almost utte

Cheer the child with the thought that the wo done is really not so very difficult. In all b books we find measures and phrases that repe selves many times.

Take, for instance, this little old melody whic merely by way of illustration:

Show the pupil that the bass has only two cha harmony. Then have him compare similar mea the treble. Take the first measure of the exer show him that it is made up of the simple tria He may not be able to grasp this information but before long he will begin to understand. the phrases. Have him to point out the similar differences. Insist upon the study of a piece aw the instrument, as a part of the pupil's daily st

As a matter of fact I find it the icy never to travel with anything iable nature, and it made me laugh n this occasion the customs officer ed to open one particular piece of gage and my "Banditti" expostulated with him indignantly, saying: "You cannot do such a thing without first asking the Señor which of his bags he desires to have opened." This I thought was absolutely the acme of politeness.

Where Atlantic and Mediterranean Meet

PROCEEDING on our journey we got into a very small steamer which tossed us across the warring tides of the straits where the Atlantic and Mediterranean meet. This little ship brought us into the bay in front of Tangier where we were met by a motorboat full of dignified Moors dressed in their long white djellabi, which appeared all the more strange to me on that turbulent water. It seems almost incredible to realize that they were sailors, and some of them even soldiers, dressed as they were in garments which looked more like white bath dressing gowns than anything else. "Very unsuitable apparel," thought I, "for such professions." But these Moors proved themselves most efficient, and, in spite of the heaving billows which threw the boat about like a mere matchbox, we reached the pier in safety.

On stepping ashore I felt immediately that I was in a world transformed—the world of unchanging Islam, of Allah, of Kismet, of the Arabian Nights! Everywhere the white-robed, stately Moors; the mysterious high-walled houses, with their flat roofs and absence of any windows; the crowds of mules, camels and donkeys, their panniers filled with every kind of merchandise; the water carriers bearing their goat-skins full of water. But the ultimate centre of attraction was the market place which teemed with every manifestation of this strange vivid life.

Music of the Market Place

HERE WAS always music; weird Arab tunes, alternating harsh and plaintive. The beat of a kind of primitive drum; the discordant twang of an instrument that looked like a viol; and the continual piping of the native flute. In the wonderful Moorish city of Marrakesch, where I went later, the music I heard in the great market place of "El Fna" was quite extraordinary. Opposition bands of flutists, violists, and drummers played next door to each other regardless of their rival performances; singers sang in loud, harsh but gripping voices; teachers recited passages from the Koran in passionate tones; snake charmers charmed snakes with raucous incantations and strange notes from primitive clarinets; the whole created a symphony of cacophonic sound which even the most modern of our composers could scarcely equal.

I think the Moors are really fond of music—their own native variety, I mean. The great Pasha of the Atlas Mountains, Sid Glaoui, who is a patron of all the Arabic arts, sent to Egypt, where I believe the finest exponents of Arab music are to be found, and imported the most expert performers to teach his wild mountain Berbers. The Arab singers, too, are greatly esteemed and I was told some go from one great Kaid's house to another, much in the manner of the old troubadours, and are greatly sought after for their talent as singers. Their singing is rather throaty and declamatory to European ears, but it has a certain wild and melancholy beauty that renders it arresting.

Playing for the Pasha

ONE OF THE distinguished Pashas I met was very anxious to hear me play, and when I told him that I could not play Arab music, he said that he did not care what I played so long as he might watch the agility of my fingers. Runs, trills, rapid passages delighted him, and when I had finished he said he must make me a present of a carpet made by his own weavers in the mountains, as he had so much enjoyed hearing me. He kept his promise and a large, vivid colored carpet arrived for me the same afternoon.

Travelling in Morocco is not a bed of roses when one is in a hurry. It is all right if you have plenty of leisure and can go your own pace. But I had frequently to start at four in the morning by motor in order to reach my destination in time for my concert in the evening, and I had often to travel ten or twelve hours, and then play the same night. (All passenger transport is done by motor in Morocco.)

Of course, I did not intend to do concert work. I thought only of a holiday. But I was urged to play in various places, and so succumbed. One of the halls I played in had the high sounding name of "La Haute Ecole des Études Berbères," and here I gave my audience Beethoven, Chopin, Debussy and Ravel, in fact, just the same kind of program as in Europe, and found the public both understanding and enthusiastic.

This, I must say, is due in a great measure to the French, who have done wonders in Morocco in the short time they have been there. Marvellous roads have been made by them all over the country; majestic hotels have been installed; and a generally high standard of living and education is maintained. All these merits are to be admired in the French Zone, and also their friendly relations with the Arab population. The French run excellent automobile services all over Morocco for the convenience of tourists and passengers generally, and these are comfortable, provided one takes the precaution of paying for one more seat than one actually requires.

MUSICIANS IN A STREET CAFÉ

MUEZZIN, SINGING AT SUNRISE

I was unaware of the advisability of doing this on my first long motor trip of eight hours, and found myself in consequence tightly wedged in between my wife and an enormously fat French woman. I am not of the slimmest myself, and I really do not know which of us suffered most: but the French lady was most voluble and complained bitterly after the first hour. She kept on protesting that though she had paid for her seat, she was outrageously squashed. At last she glared across at my wife, who is distinctly slight, and exclaimed viciously: "Non, mais comme votre dame est énorme!" I soothed her as best I could by successfully proving to her that she had secured for herself an inch more room than we had got, and as it is truly said that the French are a logical nation, this obvious fact silenced her.

Moorish Courtesy

I WAS GREATLY impressed by the stateliness of the Moors, by their exquisite manners, and princely bearing; by their regard for everything pertaining to the arts and for those who practice them. As an instance of their perfect courtesy I would like to tell of a man whom I met at Rabat, a most lovely and interesting town on the Atlantic Coast. This gentleman, exquisitely dressed in a long black cloak and spotless white embroidered vest, heard me asking our charming French hotel manageress what there was to be seen in the city. He noticed her directing me to the famous Moorish gardens overlooking the port, and he at once approached me with a graceful bow and asked me in halting French if he might place himself at my disposal to show me round the gardens and museum.

He proved a most charming guide and after having showed me all the beauties of the place he made me another bow like a prince and said; "I regret that I must now leave you as I have to go to the Hammam and take a Turkish bath." I must say, no one looked less in need of a bath than he; I never saw anyone more

immaculately clean. I thought he must be at least some great Kaid by his lordly bearing, but, when I inquired at the hotel, I was told that he was just one of the shop-keepers of the bazaar, and sold carpets. He never attempted to take me into his shop, or inveigle me to buy. It was just his pleasure to be the courteous friend to the stranger.

If carpet-sellers in Morocco have the appearance and manners of princes, the princes themselves live in the utmost splendour and magnificence. Marble halls, with delicate mosaic pavements, beautiful pillared cloisters surrounding gardens filled with exquisite orange and lemon trees, bubbling fountains and lovely cool lakes; all vie with one another in imparting charm and romance to their dwellings. One modern palace that I saw had seven bathrooms. In each bathroom there were two large baths opposite each other, one being used for soaping, and the other for rinsing off the soap. The Moors think us uncleanly to rinse ourselves with the same water in which we have washed. Are they right, I wonder?

While I was in Tangier I was most lavishly entertained by a noble Moorish Pasha in his magnificent mansion. He was a splendid man to look at, quite six feet in height and with a fine countenance. When he went out riding on his big white mule, sitting on one of the high peaked crimson Arab saddles, he looked absolutely marvellous.

His dining room was a veritable banqueting hall of noble proportions and the many rich and varied dishes which he had served to his guests showed a technic in the culinary art of a very high order indeed. It was a little difficult to manage at first to eat gracefully with the fingers of the right hand only, as is the custom of the Moors, but they say that when you get used to eating in that way, it is far cleaner than having dirty crockery and cutlery to wash, and also saves endless labor.

The Moors are tremendously hospitable, and always have one or two comfortable bedrooms in readiness for any of their friends who need accommodation for the night; and I was told that one is hardly ever obliged to go to a hotel for the night when travelling in Morocco if one is lucky enough to have friends amongst the generous inhabitants. I must say that I found the same charming characteristic prevailed among the European community in whose delightful houses I spent many happy days.

Cosmopolitan Audience in Tangier

I INVITED my friend, the Pasha, who entertained me in Tangier to come to my concert there, and he accepted. The audience on that occasion was one of the most cosmopolitan gatherings I think I have ever seen. Two ex-viziers of the late Sultan of Morocco, an ex-Russian Prime Minister, Englishmen, Frenchmen, Belgians, Spaniards, Italians, Berbers from the Riffi country—they were all present, drawn by the spell of the greatest musical classics of Europe.

There was only one piano in the town of sufficient size to be fit for use in the concert hall, and this had to be carried there on the heads of eight Arabs, down a hill nearly as steep as the side of a house. I hope the piano got safely back again to its home on the top of the hill, but since I had to leave early the next morning, I still remain in ignorance of its fate.

I found, on the whole, that simple melodies appeal to the Moors and that most of all the executive side of music interests them. This is not surprising when one considers that in their own native arts, both decorative and musical, the appeal lies in the intricacy and ingenuity of their patterns—that is to say, in their craftmanship—rather than in any kind of subject matter. In this way their artistic outlook approaches nearest to the ideas of our ultra-modern musicians who rely mainly on contrasts of rhythm and technical skill in the manipulation of new and striking effects, and not on the creation and development of melody or romantic sentiment as expressed by our classical works.

Atmosphere One of Music

I CONFESS that I felt there was music around me in every Moroccan town I visited. Even the beggars ask for alms in a kind of musical sing-song; then as you walk along the narrow streets you suddenly hear from out of the window of a concealed Mosque passages from the Koran being chanted in curious whole tone modes. In the picturesque "Souks," as the Bazaars are called, and about the humming market places the very eastern noise is weirdly musical. The native Arab instrument, the reed flute, is also always to be heard somewhere; at a window above you; up a side street in the distance; or played by a merchant's assistant sitting cross-legged on the floor of his open shop, or even by a beggar boy squatting in the gutter just under one's feet.

Talking of beggars, I noticed a touching fact about the Moroccan ones, which is, that whilst the rich man riding on his mule gives alms to the poor, the poor man does his bit by giving to the poorer than himself, and so on right down the various stages of society unto the beggar in filthy rags, whom I saw stooping to give a farthing to a blind man even more ragged, if possible, than himself.

I cannot quit my golden memories of Morocco without giving myself the satisfaction of specially praising again the boundless hospitality I received from my own countrymen. They showed me unending kindness, were one and all full of knowledge about the place and the people, and took great interest in my visit and my art. It was the greatest pleasure to meet them, and to be able to claim them as my compatriots by adoption.

Self-Help Questions on Mr. Hambourg's Article

1. *What phase of instrumental performance is of most interest to the Moroccan?*

2. *How is the same preference shown in his native arts?*

3. *What type of melodies appeal to the Moors?*

4. *What musical sounds can be heard on the streets of a Moroccan town?*

5. *What traits of the Moroccan's character are particularly noticeable and praiseworthy?*

Pupils' Time-Wasters

By Sarah A. Hanson

WHEN you come late.

When you have a lesson poorly learned.

When you come with torn music that makes it hard to find things in your book.

When you do not think and move as quickly as possible, utilizing every moment of the lesson time.

When by inattention you make tiresome repetitions necessary.

When you leave some of your music at home.

When you waste time fumbling for lesson money.

The Paris Grand Opera House

By Victor Wynn

MUSICIANS are continually meeting references to the Paris "Grand Opéra," but few save those who have seen this great edifice where so many noble works have had their first production have any idea what it looks like. Perhaps this description from *Paris, the Beautiful,* by Lilian Whiting, will make the conception clearer.

"The superb Opera House, designed by Charles Garnier, is approached by a series of broad steps, and the seven arches of the portico are embellished with groups of sculpture of 'Lyric Poetry,' 'Music,' 'Song,' 'Declamation,' 'Idyllic Poetry,' 'Drama,' 'Dance,' 'Lyric Drama.' There are medallions of Bach, Pergolesi, Haydn and Cimarosa. There are sculptured groups representing Music and Poetry attended by muses and goddesses. There are statues of Handel, Gluck, Lully, Rameau, and many others. The 'Escalier d'Honneur' (Escalier means 'staircase') is beautiful creation of white marb gerian onyx and *rosso antico,* an monolithic marbles rise to the thi (monolithic means made from stone). The ceilings are richly d with paintings of mythological There are four tiers of boxes in th torium. The grand foyer, lined w rors and sumptuously decorate paintings, statues and groups of sc is a hundred and seventy-five length and some fifty feet in widt a height of fifty feet. It is one most stately and splendid interior opera house contains a fine musical a museum of manuscript scores, bu portraits of composers, and variou and objects of more or less interes

To these objects, by the way, h added in recent years a number of graph records of great artists wh sung there.

Caruso's Meeting With Puccini

By R. Thur

THE recent and much lamented death of Puccini gives particular point to the following account of Caruso's first meeting with the composer of "La Bohème;" for surely the names of the two musicians are inseparably linked by this, Puccini's masterpiece. In his life of Caruso, Pierre V. Key tells how this work first brought them together.

In 1897 Caruso was leading tenor at Livorno, and a project was on foot to stage "La Bohème," but an artist was needed for the rôle of *Rodolfo.* Caruso was promised it, provided he met with Puccini's approval. Puccini happened to be staying near there at the time, and one Sunday Caruso was taken by a mutual friend, ostensibly for a day's fishing and shooting, to Puccini's house on the shores of Torre del Lago. At their host's suggestion, all three went out upon the lake, and then returned to the picturesque little house. "Comfortably settled once more," says Key, "Puccini turned to the singer and said: 'Signor Caruso, people have told me much about you, but never have you sing. Do you know my "Boh

"The answer came quickly. 'Yes, tro; I can sing for you the Romar please do not ask me to put on t C.'

"'Perhaps you have not looked the score,' reproved Puccini, 'el would have seen that the marking the singer may, or may not, take t C, at his pleasure.'

"'Oh yes,' agreed Caruso. 'Bu the custom to put it in.'

"'Never mind; sing me well t and I will not care for the high C erally the tenors sing all the music in order to save themselves for t note.'

"Directly Caruso had finished the *Che gelida manina* Puccini tur the friend who had brought him 'Tell Lisciarelli that I approve t pearance of Signor in my "Bohème.

Caruso was a beginner then. Tho heard him in his prime will be am his fear of the high C!

Research

By Gertrude Greenhalgh Walker

THIS is the age of research, of explorations and delving into the world's mysteries. The music teacher who does a little research work before assigning a lesson will invariably find much information that will be of great help and stimulus to the pupil receiving the assignment. If a march is the required subject given for new material, it is well to see that the pupil understands what a march is. The march varies just as much as any other form of composition. Edward Baxter Perry, in his delightful book, "Stories of Standard Teaching Pieces" thus explains at length: "The name march is derived from the French word, *marcher,* to step. The distinctive rhythm of the march had its origin in the steady, authoritative beat of drums, cymbals or tom-toms accompanying and regulating the tread of moving bodies of foot soldiers, formerly spearmen and archers. * * *

"The practical use and importance of martial music, especially the march, in all military manoeuvres and on the field of battle, have been fully recognized by all army experts in all ages. Its purpose is twofold:

"First, to stimulate courage, ardo enthusiasm in the troops.

"Second, to secure and facilitat certed action * * * by keeping bodies of men in step with a uniform manding rhythm, which spurs the la checks the impatient * * * and i mathematical certainty in executi army manoeuvres.

"There are three distinct types march in general use among practica nations * * * First and most mon, the ordinary parade march, lei dignified, yet stirring, adapted to th of seventy-five steps a minute. These are distinctively military m * * * In addition to them ar funeral march, slow, impressive and n ful, and the wedding march, brillian ful, and hopeful, with occasional t of tender sentiment."

Every composition has a history a only is the history of the piece of help to the pupil, but also some inter fact of the composer's life will brin in more intimate touch to the piece a lesson.

Fascinating Journeys in Music Land

By the Noted American Composer

CLAYTON JOHNS

Professor of Pianoforte Playing in the New England Conservatory

II

This interesting series will be continued in later issues of "The Etude Music Magazine."

NEXT stop was in Vienna, ere we remained for some days. he opera was "going"; Materna great singers were singing. Ed- auss was conducting his orches- e Volksgarten. We went to the the Prater, and spent some time ture gallery. The last day I went emetery, to visit Beethoven's and 's graves and picked some ivy hich I still preserve. The next t Vienna and went to Berlin. My holiday was over. After a few he hotel, I found lodgings for the

g the repetition of a paragraph in l issue of the ETUDE, page 265, the sake of sequence: Mr. Hecht had met in the English Lakes a letter of introduction to Joa- great violinist. After my arrival Joachim received me in a very way, he being naturally kind and Under his influence I began to th several teachers belonging to ulty of the Hochschule (High My work with them was entirely Friedrich Grabau, with whom I ie piano, was a very musical per- ver of the best; not a great pian- even a great teacher: but he led e paths of musical righteousness. having studied with Grabau for a fell ill, and I was obliged to make . Other pianists and com- ve appeared since, but the "scent ses will still hang round" Liszt ner.

Daily Life

E NOW say a word about my life. A friend in Boston gave me introduction to Frau von Schack, n lady of high degree, who had own" in the world. She was Blumenthal, niece of Field Mar- nenthal, and Hof Dame (Lady g) to Princess Frederick Charles. on Schack being "in waiting" to Frederick Charles ("The Red Countess Blumenthal and Gen- . Schack were married in the nder the protection of Kaiser and Crown Prince Frederick. well for some time; but, unfortu- eneral von Schack having forged d at cards, or something of the was disgraced and the result he fled to America and she with him. After two years of unhappiness in New York she left him and returned to Berlin, determining to support herself and her two daughters. The only means of support seemed to be for her to open her house to three or four "paying guests."

On arriving in Berlin, and after a few days at the hotel, I went to Frau von Schack's and stayed there for two years. My unprofessional friend of the bath tub in Nuremberg, and my Wordsworthian friend in the English Lakes, coming to study in Berlin, we three foregathered and spent that winter in the family of Frau von Schack, and Frau von Schack being a delightful person, we all became great friends.

Music was my chief study, but I was also interested in German and French. My first teacher of German, was a student named "Gabriel" whom we called "Erzengel" (Archangel). He was neither angel nor archangel only a stupid person. By way of making conversation I asked him about his family. He said he had three sisters, one was "verheirathet" (married) the other two were "noch zu haben" (still to be had!).

Student Life

HERR GABRIEL took us to a "Commers" (a students' social gathering) where the students sang songs and drank beer. Another student took us to the "Mensur" (the students duelling place) where we saw a number of duels, students nipping off their ears or noses, or slashing their faces. One had a gash on his cranium which caused him to flinch; *that* showed such a lack of pluck he was dropped from the corps. I was interested to go once, but never again. A few years later in Heidelberg I saw a lot of students who had been plastered over their wounds, parading themselves to show their bravery(?) ! The wounds were kept open by making the scars as broad and deep as possible. I was told that the irritation of the wound was increased, and made more decorative, by rubbing in salt and pepper. Many years afterward I saw a number of bull fights in Seville. I didn't like student duels, nor did I like bull fights; but come to think of it, I don't know which I disliked the more.

To go back to my study of German, we soon dismissed the "Archangel" and in his place engaged Frau Dr. Hempel with whom I studied for two years, taking lessons twice a week. Nobody ever had a better teacher. She was "a wonder." She knew English as well as German, knowing Faust from cover to cover. Beginning at any line, she could go on at any length by heart. She was also a delightful person with a sense of humor. In the spring she used to take her pupils into the country ("Land partie", a sort of picnic) where we ate and drank, and talked bad German. Nevertheless I still maintain that she was a marvelous teacher. I daresay some of the subscribers of the ETUDE may remember her, as a number of her pupils were American students of music, as well as of German.

Winter Pastimes

DURING THE WINTER we went to many concerts, also frequently to the theatre, for the sake of improving our German. The Berlin Picture Gallery was representative of the different schools. Every week, Thursday afternoon, we passed an hour or two studying the "Old Masters," taking *one* room at a time, each week. We occasionally went to a lecture at the university. We were not matriculated but certain lectures were free to the public. Professor Grimm, belonging to the famous Grimm family, was a delightful lecturer. The weeks passed by pleasantly. We liked everything we did. I won't say, we did everything we liked. In the course of time, Christmas came along. Christmas in Germany was a great event for young and old. Frau von Schack made Christmas merry. There was a Christmas tree, of course, and we all exchanged presents. The old Countesses and the young soldier cadets belonging to the family came, so we were not made homesick in a foreign land.

After Christmas, the days being short and dull, we began to plan for a spring vacation. In March we set out for a six weeks' trip to Italy, going as far as Naples. The pictures and architecture were a delight. In Rome I found some Roman-American friends who made life pleasant. Occasionally I went to a ball or went out to dine. I remember an interesting evening when Raphael's Four Hundreth Anniversary was celebrated when Sgambati played, and Prince Odescalchi spoke. The Prince's voice and his Italian were so beautiful, I don't know whether his performance, or Sgambati's playing pleased me the more.

Having made our stay in Florence on our way south, we went directly north from Rome to Venice. Venice was rather cold and windy. I like to think of Venice in the Summer, where I passed so many happy weeks subsequently. Leaving Venice and stopping in Vienna, we returned to Berlin, took up our studies and continued them until July, when we went traveling again.

Now if the agile reader will take a leap backward to the April number of the ETUDE and read the whole article called "A Personal Recollection of Liszt," then we will continue my story in the following lines:

In Switzerland

AFTER my experience with Liszt in Weimar, with my "unprofessional companion," we went to Switzerland, joining the friends with whom we had crossed the ocean in the Scythia the year before. In Geneva we found Phillips Brooks. Mr. Brooks knew the family with which we were traveling. We, therefore, saw more or less of him. We were looking forward to hearing him preach Sunday morning, but, as the "Genevan Journal" the next day said: "Owing to the breadth of Mr. Brooks' shoulders the congregation lost the pleasure of hearing the breadth of his opinions." As a matter of fact, the resident clergyman had no surplice large enough to cover Mr. Brooks' ample form, so we left Geneva without hearing him preach.

Chamouni and Mont Blanc were our next objective point. We didn't *climb* Mont Blanc, but we saw it in all its glory, contenting ourselves by going over to Flégère, and back to Montanvert, from where we crossed the Mer de Glace. Our mule-back climb was another new experience. If you have ever taken a mule-back ride over a mountain pass, you will remember how the mule prefers to walk along the outermost edge of the precipice. I don't know why, but he does. From Chamouni, and over the Tête Noire, and over the Simplon Pass, we went down to the Italian Lakes. That Wonderland! There my unprofessional friend fell ill and we hurried on to Milan where he had diphtheria. As the doctor refused to let me see him, I had to put in the time as well as I could. I think I saw every church and every picture in Milan.

At the end of my friend's convalescence, I ran up to Monte Generoso, north of Lake Como, to spend several days with Owen Wister. Monte Generoso was a lovely place looking over Lake Lugano. At the hotel we met some delightful English people, with whom we made friends and with whom I dined, later on, in London. Returning to Milan, I picked up my invalid, and took him to Paris, where we remained for a week or two; then I went back to Berlin, alone.

Arriving in Berlin, I found that Frau von Schack had made very different plans for the Winter. An aunt had taken charge of the Pension, with Frau von Schack's daughters, because Baron von Bleichröder had made Frau von Schack a handsome financial offer to become the head of his house, and to take his daughter to "Court." Von Bleichröder was a widower millionaire, one of Bismarck's chief financial advisers. His place was in the Behrenstrasse, where Frau von Schack was given a suite of rooms in the palace, with a carriage and a coachman, when she could go and come as she pleased.

Dining with Ambassadors

FRÄULEIN von Bleichröder was not particularly attractive, nevertheless, her father did everything to bring her forward before the world. There were grand dinners with ambassadors and diplomats from all nations. Frau von Schack, being the head of everything, she invited me to the dinners, and to the musical parties and dances. One I remember in particular, when Sarasate and other great musical lights played and sang.

Frau von Schack still clinging to the remains of her former glory kept in touch with the Royal Family. On the birthday of Kaiser Wilhelm, she took me to the Kaiser's palace and let me see the presents displayed in one of the family rooms. The only presents I remember were different Gromzes. On one of them was a card from the Crown Prince and the Grand Duchess of Baden (the Crown Prince's sister) on which was written "Für Papa, von Fritz und Louisa." (To Papa from Fritz and Louisa.) On the card from the present ex-Kaiser Wilhelm (he was then about 24), was written "Für Kaiser Wilhelm von Seiner Königliche, Kaiserliche Hoheit, Prinzen Wilhelm von Preussen"!! (For Kaiser William, from his Royal Imperial Highness, Prince William of Prussia.)

A Court Ball

CROWN PRINCE FREDERICK was adored by everybody. The present-day ex-Kaiser got his deserts owing to his acute egoism. On the evening of the birthday, there was a brilliant celebration in the "Weissem Saal" (White ball room) of the old palace, where the world assembled to honor the old Kaiser. An act was given from an opera, a short play, and then a dance. Frau von Schack "tucked me in" by special permission, where I took my place in the gallery where I could look over the whole scene. The costumes were brilliant. The Hungarians seemed, to me, to be the most splendid. The old Kaiser was there, of course, and the Crown Prince and Princess, Bismarck and Moltke, too, and many other great people.

After two years of Frau von Schack's chaperonage in Baron von Bleichröder's palace, Fräulein von Bleichröder married an Austrian officer. Her father presented her with an estate in Silesia. The officer took his mistress on the wedding journey and placed her in a little house near the gate of the estate. Shortly after the marriage, they were divorced and finally she committed suicide. Frau von Schack returned to her simple life with her two daughters. I stayed with them for several days, passing the days together pleasantly, in 1888. My unprofessional friend, a few years later, went to Berlin to see them, on his travels; Frau von Schack had died and the two daughters lived together very quietly in a remote quarter of Berlin. Since then, I have heard nothing of them. My intimacy with the family of von Schack made a marked impression on my life.

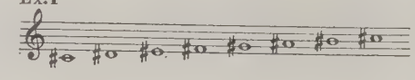
The Real Chopin

By S. A. Walsall

A PARALLEL between the Chopin conceived by writers of romantically inclined and the Chopin of reality is well drawn by James Huneker, in "Overtones." He observes: "That Chopin was a Pole, who went from Warsaw to Paris, there won fame, the love of George Sand, and a sad death are facts that even school girls lisp. The pianist-composer belongs to the stock-figures of musical fiction. He was slender, had consumption, slim, long fingers, played vaporous, moon-haunted music, and, after his desertion by Sand, coughed himself off the contemporary canvas in the most genteel and romantic manner * * * All this is Chopin romantically conventionalized by artist-biographers and associates. The real man—as nearly as we dare describe a real man—was of a gentle, slightly acid temper, and of a refined nature, who had a talent for playing the piano that was without parallel, and a positive genius in composition. His life was stupid, if compared with an actor's or a sailor's, and was devoid of public incident. We can see him giving a few piano lessons to prim, chaperoned misses of the Boulevard Saint-Germain; in the afternoon making calls or studying; in the evening at the opera for an hour, later in the enchanted circle of countesses who listened to his weaving music, and afterward, with a space for breathing, at a fashionable cafe before retiring. Public appearances were rare; this aristocrat loved not the larger world and its democratic criticisms. His was a temperament prone to self-coddling. Only to the favored few did he reveal the richness of his inner life. That he suffered intensely from the petty annoyances before which the ordinary man would hunch his shoulders was but the result of a hyperaesthetic delicacy. An Aeolian harp! you cry, and the simile is a happy one. But no wind harp has ever discoursed such music as Chopin's piano."

Teaching the Sharps and Flats

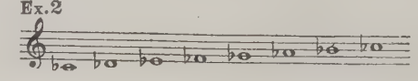
By Charles Knetzger



CHILDREN are often confused when called upon to distinguish between sharps and flats and, strange to say, after one or two years' lessons, are frequently unable to locate them on the keyboard. Such pupils must first of all be impressed with the fact that sharps derive their name from the key below, and flats from the key above; that is, the sharp of any key is the next key to the right, whether white or black, and the flat is the next key to the left. Children must be drilled in naming and locating these keys. Mere telling will not do.

As a preliminary exercise they might play the C scale one octave ascending, then go over the scale again inserting the nearest key to the right of each one played, calling it the sharp of that key. Next have them play the same scale one octave descending, then insert the nearest key to the left of each one played, calling it the flat of that key. Put special emphasis on the fact that a sharp or flat is not necessarily a black key. It may take some time for them to realize that F is the sharp of E, and E is the flat of F: also, that C is the sharp of B and B is the flat of C.

The natural sign is used to cancel or take away a sharp or flat. The note thus marked is always played on a white key. Sharps, flats and naturals are signals directing the musician what note to play. He must obey them just as the traveler on the highway does the "Stop" and "Go" signs.



Besides learning to recognize sharps and flats on the printed page, and being able to locate them correctly on the keyboard, pupils should also learn to write them on the staff, as in the following example:

Ex.1

Notice that the lines of the sharp signs cross directly in front of the note head. Also:

Ex.2

Here the head of the flat sign occupies a complete space. A very small head would appear grotesque.

To show the necessity for sharps and flats a good plan is to play a familiar melody omitting the sharp or flat designated by the signature. The pupil who is not absolutely tone deaf will detect the error and correct it at once. Children who do not detect glaring errors of this nature are much in need of ear training—an exercise of far greater importance in music than training the eye.

Your Teacher Enjoys

By Sarah A. Hanson

CLEAN hands with nails attended to.
Your being neat and clean otherwise.
Promptness at lessons.
Your doing your best to learn.
Your trying to be pleasant.
Your treating her as you would like to be treated.

Improving a Pupil's Sense of Rhythm

By Lucille Nancy Wagenfeldt

"BEFORE I came to my lesson to-day I clapped through both my pieces, and Jimmy could guess what they were just by hearing me clap!" Such an announcement presages a good lesson.

If a child claps insteads of plays the piece and at the same time counts aloud, the rhythm is separated from the melody, and he begins to get the "feel" of it. Next, the piece or etude is played with each hand alone, the instructor playing the same an octave higher. When the pupil is able to do this he goes through the piece, taking one hand while the teacher takes the other. By this time a good idea of the rhythm is grasped.

Then the child may attempt to play both hands together. During all this time he is counting aloud, as this makes him concentrate.

It will not be long before the pupil will be able to play in correct time without much help from the teacher.

Geometric Gymnastics

By Elizabeth McConkey

SEVEN hundred dollars for a piano for the gymnasium: the whole amount to be raised by the school children! So many canvasses; so many steps; so many pennies: and before the campaign ends—so many doubts and questions: "Why do we need a piano for marching? Why do we need music for dancing!"

Many activities require concerted action. Rowers pull together: soldiers step together. These movements recur at certain unvarying intervals.

A melody is heard one sound after another. It is spread over time as a painting is spread over canvas. Being a time-art it takes minutes or even hours to be comprehended.

But, being an art, it forms a whole from many parts. The parts of the desk ruler are *inches*, but that is something we see, a space unit. In music the units are parts, not of space, but of time—measured *pulses*.

These recurring time-lengths form what we call *rhythm*. It is by this the rower measures the pull of the oars; the soldier the step forward; the dancer the recurring figure.

Musical time-lengths tell not only when to step or pull or dance, but also how. This is done through the use of different arrangements among these units. There are three main types depending on the relation between the strong and weak pulses:

4/4 ——— (strong)
——— (weak) ——— (weak) ——— (weak)

3/4 ——— (strong)
——— (weak) ——— (weak)

2/4 ——— (strong)
——— (weak)

The numbers above the fraction lines indicate the number of beats in a measure. The numbers below the lines show the unit of measurement, which in this case is a 4th or quarter note(♩)—just as one might call 3 inches 3/12 (of a foot). Soldiers march to 4/4, dancers dance to 3/4, and sailors row to 2/4 times.

We need a ruler to solve the complicated problems of geometry; still more do we need a piano to elucidate the intricate figures of dances and gymnastics.

Planting a Musical Ga

By Dora T. Nye

A MUSICAL garden should be s September, since there is more flowers then than during the wa mer months. Each pupil has six which to plant the flowers he like

In the first plot he plants Scales second, Arpeggios; in the third, in the fourth, Pieces; in the fifth, Selections; in the sixth, Original

The plots are pages of white paper nine by ten inches. On t page is painted or pasted any flo pupil chooses to represent this sect the top of this page the teacher the number of major and minor sc student has learned. Near the bo the page the staff is made by t and a scale written thereon.

The Arpeggio page is done in a manner. The number of studies and their composer is written on t page. The flowers are placed as t likes best.

The number of pieces studied is the next page. On the Memory written the number of pieces mer The flower used in this plot ma aptly be the Forget-me-not.

On the Original Page a compos the pupil's own invention is set do he cannot compose, preliminary such as Tonic, Sub-dominant and nant are written.

On the cover of each book the drawing teacher draws a harp. Th colors the harp as he likes, with gi or yellow crayons, and the strings a shade. The teacher fastens the pa gether with small, gold-colored cla

No two books need be alike an originality may be shown in the a ments of the colored flowers. Rose turtiums, pansies and asters mak attractive books. At recitals these may be put on exhibition for the and friends to see.

These gardens are really a record progress made during the half Though they mean a little extra for the teacher, this is well repaid incentive they give the pupils to work and the insight they give the into the work already accomplished

Helping the Beginne

By Caroline V. Wood

BY TEACHING the beginner to hel self by reasonable and methodical we give him the greatest and most help we can.

I have found it a good plan, wher pil is starting in on the Mathews *Course*, for example, to have h through the following drill upon tak each new piece of music:

1. How are we going to count this
2. Tell me what kind of notes y in this piece and show some of eac to me.
3. Are there any rests? What ki any)?
4. How many phrases are there piece?
5. Name the notes of the left hand those of the right (even if both hand alike, an octave apart, as this fac reading notes in different stages, a necessary part of the drill).
6. Now play the left hand part right hand part; then both tog *always counting*.
7. If special stress is laid on th hand part from the very beginni always directing particular attention left hand first and working out its culties it will not cause the troul usually does.

Well-Known Transcriptions and Arrangements for Piano

An Authoritative Historical Article by the Well-Known English Music Savant

ORLANDO A. MANSFIELD, Mus. Doc.

NCERNING the value of musical ar- angements in general, there has been o small amount of controversy. To er we have no intention of contribut- now, our object in the present paper o define our terms and distinguish n them, also to support our defini- nd distinctions by typical instances nples. Perhaps the best definition arrangement, pure and simple, is ven in Stainer and Barrett's *Dic- of Musical Terms,* in which the ion is defined as one denoting "a n or adaptation of the parts of a ition to fit them for performance r voices or instruments than those lly designed."

late Sir Hubert Parry declared the ns of a musical arranger and those iterary translator to be more or alogous, requiring in both cases "a correspondence of feeling with ginal author." At any rate, it is ly agreed that any arrangement, to stically successful, must be faith- ts original, setting forth the salient s of the latter without the introduc- foreign material, and reproduc- nearly as possible the composer's although altering his original dis- n of parts and subordinate rhythms. tter course is almost always a ne- in order to translate effectively the of one instrument into the cor- ling peculiarities of another. In is just at this point that the skill arranger comes in; just at this nat the arranger and the transcriber mpany. The latter, as Mr. J. A. Maitland says, "rarely, if ever, add something of his own to the ne selects for treatment." Indeed, Hubert Parry complains, many transcriptions destroy "the bal- f the original works by undue en- nt of particular parts." On the nand much useful work is done by ibers who have, by "compression ondensation," rendered long and te orchestral or choral works avail- or performance upon, let us say, ng of instruments," the organ, or its more intimate and domestic , the modern pianoforte.

Music Made Proper

rious fact in the history of early arrangements is that the process anging was not then described by rm at present so widely used. o the end of the eighteenth century, nanges as were made in the works composer of the Elizabethan or estoration periods, to fit them for nance under a different environ- or for expression upon a different n, were described as "brought to "framed," "fitted," "figured," proper," or "newly set forth." ly the first work to employ the 'arranged" was "The Beauties of ," a series of Handelian numbers th with pianoforte accompaniments, eph Corfe, (1790-1820), sometime t of Salisbury Cathedral. Of gements for the pianoforte" the be so described were those of 's choruses for pianoforte duet, appeared in 1795 as the work of Holder (1764-1832), a London and organist, who claimed descent from al Wolsey. These arrangements a well-deserved popularity and the standard pieces of their kind ny years, being frequently played performers on one organ." Al- it is difficult to say with certainty as the first professional arranger, dit, if so it may be called, probably Giambattista Cimador (1756-1810), etian of noble descent, who ulti- settled in London as a singing He heard that the orchestra of ng's Theatre, in the Haymarket, had refused to play Mozart's "Symphonies" on account of their supposed difficulty. Whereupon, he arranged six of these same symphonies as sextets for strings and flute, the excellence of the work thus voluntarily undertaken not only achieving deserved popularity, but securing for Cimador permanent employment, by London publishers, "on purpose to make arrangements of large works for the pianoforte or small bands." Just about this time Salomon, the German violinist-conductor, who had prevailed upon Haydn to visit London, and produce there his "Twelve London Symphonies," had also decided, as a result of the popularity of these works, to have them arranged for pianoforte solos. This decision was admirably carried out by J. S. C. Possin, (1755-1822), another German musician, "a man of very singular habits," who settled and died in London; whose modesty was so great that he refused to allow his name to appear either on his arrangements of the Viennese master's works, or on any other of his personal compositions or arrangements; and who, at death, left instructions that all his manuscripts be destroyed. Yet, Haydn considered him to have been one of the foremost theoretical musicians of his time.

Hymn Tune Arrangements

The mention of nameless and anonymous arrangements recalls to mind the hymn-tune arrangements, or rather derangements, which were made from classical sources at the beginning of the last century. Whether or not the modesty of the arrangers prevented the appearance of their names in connection with their own handiwork we cannot say, though the reason must have been a distrust of their own powers. At any rate, the workmanship in most cases was so bad, that it is well for the workmen that their names have not been handed to posterity. This would have been to their lasting discredit.

In a paper of the limited dimensions of the present essay it will be impossible to enumerate the many transcriptions and arrangements which the great masters have made of their own and other works. But mention should be made of Bach's transcriptions, for clavier solo, and also for organ solo, and for four claviers and string quartet, and of the violin concertos of the celebrated Italian violinist, Vivaldi, who died at Venice in 1743. Bach also arranged his own *Violin Sonata* in G minor, as an organ fugue in D minor and adapted at least two of his violin concertos for performance upon the clavier. In fact, a pamphlet could easily be written concerning Bach's arrangements from his own works only.

Handel's Arrangements

Handel, as we know, not only freely borrowed from other composers, or is credited with having done so, but also arranged many string concertos as organ concertos, and transcribed some of his Italian chamber duets as material for the Messiah choruses; as *For Unto Us, His Yoke Is Easy,* and *All We Like Sheep.*

Beethoven, in addition to approving of arrangements of his works made by other hands, especially those of the English musician, Mr. John Watts (1780-1854), made numerous arrangements of his own works, for example, the *Trio in C Minor,* Op. 1. No. 3, as a *Quintet for Strings;* the *Pianoforte Sonata in E,* Op. 14, No. 1. being transcribed as a string quartet; the *Septet,* Op. 20, as a *Trio;* the *Second Symphony* as a pianoforte trio, and so on.

Then Schubert arranged many of his instrumental movements, including his *Overtures* in the Italian style, for pianoforte duets; Mendelssohn, his *Overture* to the "Midsummer Night's Dream" for pianoforte solo; the Scherzo from his *Octet for Strings,* Op. 20, for full orchestra, to replace the *Minuet* and *Trio* in his "C minor Symphony;" Schumann some of his *Overtures* for pianoforte duet, Madame Schumann arranging his *Quintet,* Op. 44, for two pianofortes; Brahms his *Hungarian Dances,* originally written for pianoforte duet, for full orchestra, and so on.

On the other hand we have innumerable examples of arrangements and transcriptions made by hands other than those of the composer or those of his personally instructed or supervised contemporaries or friends. Thus, for pianoforte, Liszt has made some wonderful transcriptions of Schubert's songs; Busoni and others have arranged for pianoforte solo some of the principal organ compositions of J. S. Bach; while Liszt again is responsible for a fine pianoforte arrangement of the whole of Beethoven's nine symphonies, and is also the perpetrator of a clever transcription of Mendelssohn's *Wedding March.* These are, however, but a few selected items from amongst the enormous number of arrangements for pianoforte solo with many of which our readers are probably quite familiar, perhaps so familiar as to need no further mention of any of these works.

When we pass on to arrangements for pianoforte solo, for pianoforte duet, or even for two pianos, four or eight hands, of overtures, symphonies, operas (entire, or in selection or fantasia form) the list becomes of such overwhelming length that it would be impossible to enumerate here even a tenth of the works arranged, or of the musicians responsible for the arrangements. But it is only just to the arrangers, many of them musicians of no mean ability, to say that most of them have performed their respective tasks with taste and skill. In this class may be mentioned the arrangements for pianoforte duet of Beethoven's *Pianoforte Sonatas,* and of his *Sonatas for Pianoforte and Violin.*

Arrangements for Orchestra

On the opposite side of the picture, namely, pianoforte music arranged for the orchestra, we find amongst other things such important numbers as the orchestral transcriptions by Berlioz and by Weingartner, of Weber's well-known pianoforte solo, *L'Invitation à la Valse;* also innumerable smaller works, including Gounod's hackneyed transcription (to which a soprano melody is added) of the first *Prelude* from Bach's immortal "Forty-eight." But we must by no means forget to mention the wonderful organ arrangements and transcriptions of the late W. T. Best (1826-1897), the pioneer in this field, first organist of St. George's Hall, Liverpool, and the greatest organ virtuoso of the last century. Best was, practically, the first to arrange effectively and artistically, the great classical instrumental and choral movements for performance upon "the king of instruments," thereby opening up a path in which the best modern organists and organ writers have been only too proud and delighted to tread.

A closing allusion to some transcriptions whose only claim to recognition is their utter inadequacy and impropriety would necessitate the mention of a derangement of the *Hallelujah Chorus* for two German flutes, published by Walker, of London, about 1800; another for two concertinas; and a final distortion for harp and pianoforte with *ad libitum* accom-

paniments for flute and violoncello. But, when all is said, these are in no sense so buffoon, not to say blasphemous, as the operatic melodies torn from their connections and used in many supposedly religious places and connections in the Western hemisphere and formerly, but happily no longer, in the Eastern hemisphere. The names of the perpetrators of these musical outrages, improprieties, impertinences, or irrelevancies, are not generally displayed, and for this we are thankful! For thus we are spared the necessity of advertising any such an individual. We would rather say with Thomas Moore,

"Oh, breathe not his name! let it sleep in the shade,
Where cold and unhonoured his relics are laid."

"Give Me Little Classics"

By Nellie B. Smart

FOR thorough musical teaching the use of little classics is a necessity, though some contend that they do not appeal to the child mind. Without them he has no perception of the simple beauty of good music, and his taste, whether natural or imparted to him, remains untrained.

In teaching it is not right to neglect those musical pictures of pure beauty which have been put into the child's world by Gurlitt, Clementi, Heller, Haydn and many others. They are a guide to the greater works which, in later life, are likely to bring so much pleasure.

Classics, some say, are too heavy for the child mind. There seems no sense in the word heavy, as applied to little classics; and I feel as though I am the child pleading with his teacher to do him justice and to know that he is capable of loving those little beauties which were left to him by the great masters.

With some children it is hard to make them advance in good taste; but sometimes the home is a little to blame. In taste a teacher cannot do much if the home is against him. Praise a child persistently for playing trash and he will like trash; but if he is praised persistently for playing a child's classic, his face will beam with a keener liking. Great care should be taken not to give pieces in the classical style that are too difficult. Nothing turns the pupil so much against a piece as to find parts in it he cannot master.

A pupil at the beginning can form no conception how far he will go before he ends. Suppose he should take counterpoint, harmony, composition and musical form. How gratefully he will remember that teacher who gave him the little classics which he knows so well: where the melody is answered in treble or bass; where the harmonies are so simple; where the sections and sentences are so well defined and the form so easily understood.

It is perfectly clear to all who give thought to the subject that little classics are a positive necessity to good teaching. Do we ever go to the great teachers of the present day, who pride themselves on their thoroughness, and find these classics neglected? Never. They may give those which appeal to the emotions, Chopin, for instance, rather than those which appeal to the mind such as Bach, but they are classics all the same. How great would be the advance if all children were honorably taught to know at least what good music is. We should not have the best thrown on one side, while our ears are worried by the din of sounds that are worse than any of nature's music.

"Give me little classics," pleads the child of mind.

Anything that is tiresome is neither artistic nor theatrical.—GIULIO GATTI-CASAZZA.

Unique Report Cards

By Helen Oliphant Bates

"I CAN hardly wait to get my report card because I expect good grades and I want to read the story on the back.

"How do you know that you will find a story on the back? Miss Grey never sends out two report cards alike. This month, instead of white or colored cards, she may send out pretty folders decorated with musical symbols, pictures of composers or musical instruments, or perhaps verses about music and practicing. We may get biographies or descriptions of the different instruments, and then it is time to be prepared for a speech at the next class meeting.

"One month she put three measures of music on each card and offered a prize to all those who found the name and composer of the piece. This was easy, provided you had no bad grades that made you ashamed to show your card; because, as Miss Grey had taken three measures from one piece of each student, it was simply a matter of finding out the one who knew your three measures. Then she had a class meeting at which each one announced the name and author of the music on her card, and whoever was studying the piece had to play it. Those who had not been practicing faithfully certainly made resolutions not to be caught again with poorly prepared pieces.

"This all sounds very interesting. I am going to work carefully to be ready for anything I may be asked to do."

Daily Technical Practice

By Fred J. Tighe

HERE is a schedule which makes the practicing of scales, chords and arpeggios interesting. The twelve keys are divided among six days. For instance, on Monday practice the major scales of B and E, the minor scales of E and A, the chromatic scale beginning on C, the major chords of A and E-flat, the minor chords of D-sharp and F, and so on through the Monday column.

The work of this chart happens to correspond to the requirements of the examination for fourth year in one of the leading conservatories of music. The chart may be enlarged to include scales in contrary motion, and in thirds, sixths and tenths for more advanced pupils.

The metronome marks are given, the scales are to be played staccato in quarter and eighth notes.

I have found that once the pupil has been through the twelve scales, taking all the movements in the same key, that this schedule can be introduced to great advantage. Not only is the technical work made more interesting, but the pupil also attains an equal facility in all keys.

At first I give them one column to prepare for each lesson; later the pupil is left to practice at home each day what the day's column calls for. The teacher at the lesson just asks for different scales, chords, and various technical exercises at random, to see that no faults are creeping in and due practice maintained.

DAILY PRACTICE, TECHNICAL WORK

	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
M. M. ♩ = 80						
SCALES, in quarter, eighth and sixteenth notes						
MAJOR	B E	A E♭	F G	D B♭	A♭ D♭	C F♯
MINOR, both modes	E A	D♯ F	G D	B♭ G♯	C♯ C	F♯ B
CHROMATIC	C	C♯	F	F♯	E♭	A♭
M. M. ♩ = 72						
CHORDS, solid and broken, 3-note and 4-note						
MAJOR	A E♭	F G	D B♭	A♭ D♭	C F♯	B E

CHROMATIC	D	F	G	A	B♭	B

The (So-Called) Portam Staccato

By Ben Venuto

THIS term, though in somewhat mon use, is very unfortunately as *portamento* properly means a from one tone to another in such ner as to run through all the intern degrees of pitch—a thing possibl with the human voice, the slide tro and instruments of the violin fa perhaps we ought also to add, the guitar." However it is not our object to discuss musical terms, bu ing them as we find them, to explai how this touch should be perform the piano.

What is the difference between

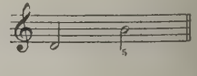
a pupil asks. And the answer is rally and correctly, that the dots modified by the slur that a lesser of separation is indicated.

In order to judge just how mu little the tones should be separate following method is helpful. Play notes *with one and the same finge* as smoothly as possible, and you will an excellent example of "portamento cato." Now use your regular fin again, and try to imitate the effec produced with one finger alone. D use any special staccato touch, but n play the notes plainly, yet not quite nected.

Incidentally, it will not be out of to mention the fact that in *violin* the slur (in this combination of dot slur) is merely a sign that the note played in one bowing, and the staccat fect remains as decided as ever, exc song-like passages. Each instrumen its own usages and traditions.

Reaching by Rotation

By Ada Pilker



THE inability to reach difficult i vals with ease often proves to be a se inhibition to the fluent production of full tones.

Ease in reaching large intervals be quickly gained by the use of rot during practice periods. By rotation hand approaches the key from above, eliminating the cause of the diffic which is tension in the palm of the h

To insure the regular approach o hand from above, rotate the right arm ward the body in an ascending pas and away from the body in a descen passage. Reverse the process for the hand.

Difficult reaches yield readily to treatment. After a few repetitions rotary motion the interval may easil taken in the normal manner.

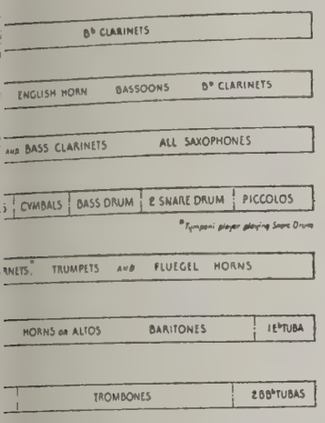
Rotation may be practiced both forw and backward, as in the following ample:

Rotate from 3D to 5B and back f 5B to 3D.

Practiced in this manner, rotation duces a marked improvement in the t and will do much toward freeing arm as it automatically produces wei

"I BELIEVE that concerts will become m intimate, smaller affairs; that a re evening of the future will be an ever of music and interpretation, and that men of great talent will survive."—*Leo Godowsky.*

DEPARTMENT OF ORCHESTRAS AND BANDS



How to Develop a School Band

By J. E. MADDY

Part II.

terally thousands of letters have been received at the office of THE MUSIC MAGAZINE *commenting upon the policy of expansion d by* THE ETUDE. *Our readers who are interested in the orchestra band will be pleased to note the inauguration of a new department will contain articles relating to the band and orchestra instrument.*

The following article is continued from an article in the June issue by Mr. Maddy, a well-known expert on School Bands. It is republished from an address made before the Music Supervisors' National Conference by permission of the National Bureau for the Advancement of Music. This part may be read independently of the first section.

hing Diagrams for Modern Bands

ing diagram shows approximate ment, which varies with instrumen- The plan followed always has the es in front (so they won't bump ides into those in front of them) d by the larger brass, then the The drums are usually placed in ter with brass in front and reeds them, so the drums can be heard ie players. Oboe and bassoon play- uld be taught to play the snare s it is difficult to march and play struments and more snare drums advantage to a marching band.

Where to Have Rehearsals

is often a difficult question. The is, make the best use of what you No other teacher wants to teach where the band can be heard re- g. The acoustics of the rehearsal re often poor. The stage of an um is an ideal place for band re- . The space takes up the echoes kes the music clearer to the players e leader. When the pupils play public they are used to the place, important consideration. Small for band rehearsals are usually or there are usually many distract- oes and when these are present it is impossible to play in tune.

Seating the Band

chairs and music stands should be place before the band convenes. itor or some student appointed for pose, should set them. To facili- s, the floor should be marked per- ly in some way so that there re- out to set a chair on every mark ertain kind and a music stand on ark of another kind. These marks painted on the floor in two colors, ll that they will be inconspicuous. y wear off in time and when the larges or shrinks, they are difficult ge. Tacks of two kinds with con- s heads are better, as they may be as occasion demands.

Sectional Rehearsals

band should be divided into two sec- he reeds in one section and the brass and percussion in another. These should meet from time to time in a sectional rehearsal. The work at these rehearsals should be largely individual.

Tryout Routine

A selection is assigned by the director a week in advance and the players are given an opportunity to take the music home for practice, the players at each desk arranging for the use of the music on alternate days. When the rehearsal starts the conductor selects a phrase or passage of the assigned piece and the players play the passage in unison and then individually, beginning with the best or head player. This is, strictly, a contest and the members present are the judges. As soon as one player plays the passage better than the one preceding all hands go up and the players change seats immediately. In case of doubt the conductor decides. The conductor reserves the right of veto in case of prejudice, which often occurs among students. The same routine is followed throughout the other sections, after which the entire selection is played by the entire group. The rest of the period, if any, is taken up in rehearsing the music as at a regular rehearsal.

The spirit of competition is the strongest incentive to which we can appeal and it will instil more ambition than any other device. The loss of a seat becomes a very serious matter and pupils will do an amazing amount of hard work to regain it.

Officers

Every band should have some organization, with regularly elected officers, and these should be responsible for the functioning of their various departments. Each part should have its leader, to be determined by the "tryouts." In addition, there should be a president or manager, a vice-president, or assistant manager, and most important of all, a librarian and one or two assistants. There should also be an assistant leader or two and a drum major. This plan of organization serves two purposes. First, it relieves the leader or teacher, who has his hands full with the teaching. Secondly, pupils need training in responsibility and here is an excellent chance for it.

Suggested List of Band Rules to be Emphasized

1. Order is Heaven's first law. It applies especially to band practice.

2. (a) Every member must be in his place when the five-minute bell rings. (b) Take places quietly. Warm up in perfect silence.

3. (a) When the bell rings, the concert-master (solo clarinet) rises; takes B flat from the oboe. This is the signal for principals of each reed section to arise, take the B flat and tune their sections. Brass and percussion players arrange their music according to program on blackboard while reeds are tuning. All reeds tune at the same time and stop as soon as they are in tune and give the brasses a chance. (b) When reeds have tuned, concert-master signals, and the brasses tune. Reed players arrange their music while the brasses are being tuned. When concert-master sits, all tuning stops. The conductor rises and the rehearsal begins without a word.

4. (a) Watch position of instruments while playing. (b) Sit with both feet on the floor, poising forward for correct breathing. (c) All players must have uniform resting position for instruments. It is the duty of the efficiency manager to report all cases of poor position and disorderly conduct.

5. (a) Do not notice mistakes of others in rehearsal or concert. (b) No visiting or practicing during rehearsal or concert. Reason: An ear that is not delicate enough to dislike other sounds during music will never make a first-class musician.

6. Anyone wishing to speak during rehearsal must rise and address the presiding officer or conductor.

7. (a) All eyes on the conductor. (b) Stop playing instantly when you hear three taps or when the bâton stops. (c) Instruments in position ready to play when you hear two taps, or when the conductor raises his bâton, or when he speaks.

8. Between pieces: (a) Get next piece ready. (b) Tune quietly if necessary. (c) Be ready to start on signal.

9. Failure to comply with the above rules will be punished by suspension from the band. Re-admission will be granted only by written order from the principal.

10. (a) Auditorium shall be closed to everyone except members of the band during sectional rehearsals. (b) Parents and teachers may visit sectional rehearsals by permission only. Listeners are admitted to all other rehearsals, provided they are perfectly quiet.

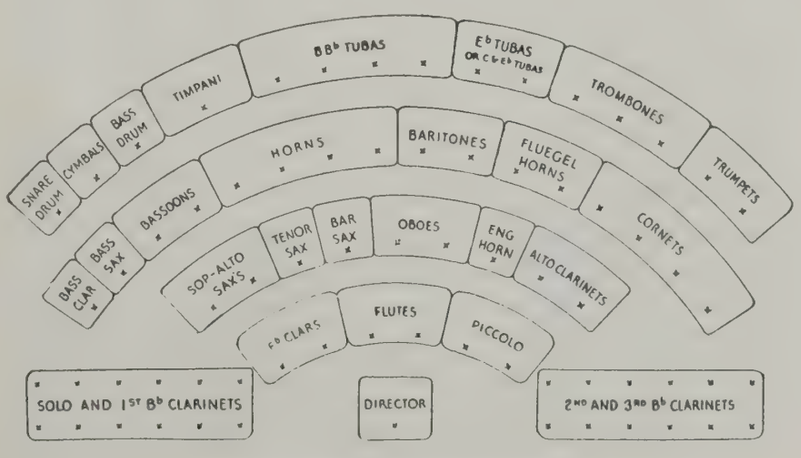
11. All members must take at least one lesson a week and practice approximately six hours weekly outside of class.

12. Phrasing must be marked by the third day after the first reading. Members of sections are held responsible for their sections in marking and conduct. (May be omitted.)

13. Tryouts are held every week, at which time promotions are made in accordance with ability shown. Players are admitted by examination only.

14. All smaller instrument cases must be under the chairs of players.

Note. The band is organized with a president, secretary, librarian and assistant librarian, student leader, drum major, and efficiency manager. Assistant librarian places books and music before rehearsals. Efficiency officer is appointed by the conductor. Attendance is taken by Secretary during rehearsal. Secretary collects excuses and grants passes.



Discipline

The best way to discipline a music ensemble of any sort is to give them so much to do that there is no time to do anything else. The lesson or rehearsal should be so organized, routined and programmed that no time is left for foolishness. The material used should be so profuse and interesting and the ideals of the band so high that no interference of any sort is tolerated. The public opinion of the class on this point should be so strong in the right direction that none dare go against it.

All noises not absolutely necessary should be banished from the rehearsal room.

Leaders are very apt to be careless in selecting what they are to rehearse, and so, by meaningless repetition and aimless practicing, dissipate their energies and discourage their pupils. Of course, pupils like to play over the music they know and like, but there is a limit to their desire for this. They instinctively know whether they are going ahead or are simply marking time. So, even in the playing of an old piece, the leader should be sure to bring out some new perfection in the playing or beauty in the music so plainly that every pupil in the ensemble will see that that particular playing was time well spent.

SEATING PLAN FOR SYMPHONIC BAND

A NEW DEPARTMENT OF PUBLIC SCHOOL MUSIC

To be Conducted Monthly by

GEORGE L. LINDSAY, Superintendent of Music, Philadelphia Public Schools

What the Music Supervisor Can Do During Vacation Ti

IT MUST BE remembered that long vacations are not granted to business men and women. It is only in certain professions that the practice of taking long vacations obtains. The precedent has long been established in the schools by the fact that the labor of the boy and girl was needed during the late spring and summer in helping on the farm. When the big cities sprang up the policy was adopted and while there is a two-hundred-day school year required in most places, the rural communities have been very loath to fall in line in accepting an adequate school year for the boy and girl. There is an exodus of school children of foreign parentage in the cities every spring. Whole families move to the country and work on truck farms and in the fields; naturally the teacher is relieved from duty when the schools close.

Many communities have adopted a three-term school year and others have established summer schools. The three-term school year affords an opportunity for an increased income and the school teacher is honestly glad of the chance to continue at his post. The summer school of six weeks or more has been established for pupils who have failed in certain subjects and who wish to make up the work. The study of music does not function in the summer schools to any extent and the music teacher finds that the summer vacation enforces a period of idleness on him unless he takes advantage of the opportunity to seek employment as a professional musician either by playing or teaching. There are many ways of utilizing one's spare time which will give great satisfaction. I propose to outline some of the opportunities which present themselves to the music supervisors for study and advancement in the vacation time.

Outside Work

THE AVERAGE school music supervisor maintains a class of music pupils throughout the season in voice, piano, violin, or other instruments, and the class can often be carried on throughout the summer, as parents are anxious for their children to be kept busy doing something worth while during the summer. The supervisor who has a high standing can secure work in school music methods' teaching at some summer school. Of course contracts must be made by the supervisors interested by first attending conferences and gaining recognition as prominent leaders in their field.

No one is better equipped than the school music teacher to give normal courses in piano, violin and voice class teaching. This presupposes technical skill on the part of the supervisor and a tie-up with some of the societies or corporations which are developing class instruction in music. Classes of children can be carried on in piano, violin and other instruments during the summer.

Summer Camps and Vacation Schools

THE SERVICES of the school music teacher are eagerly sought by the leaders of summer camps. Summer camp life calls for recreational activities in which music has an established place. Outdoor life and music go hand-in-hand. Small orchestras, consisting of any and every instrument available are in great favor. The community-sing is a part of the daily program. Glee club work is very popular and talks on music appreciation, with the use of the phonograph, are indispensable for education and entertainment on long summer evenings. The kinder symphony offers everyone a chance to play. Harmonica clubs have the call for recreational activity in music. The boy and girl scouts are eager to learn the bugle calls; drum playing is also popular. What would the summer camp be without music? The possibilities of music work in conjunction with the summer camp are many.

The vacation Bible school offers an opportunity for the school music teacher to carry on all kinds of musical activities and the music teacher has a broad field here. Operettas and pageants can be prepared and performed. The vacation Bible school depends very largely on the ethical value of teaching right principles of living through the medium of song. These schools are carried on by school teachers and the services of the school music teacher are welcomed.

Summer Engagements

THERE ARE many young supervisors who furnish groups of advanced public school pupils to play at summer places for entertainment and dancing. Many high school music teachers accept engagements for their orchestras and bands. This enables the supervisor to conduct a company of pupils who have been playing together for several seasons, and the young people are extremely eager to accept opportunities of this kind.

In one of our large cities a high school band furnishes music for the summer at a refined amusement park. The supervisor who takes advantage of opportunities of this kind finds that his orchestra or band class which is carried on during the school year is greatly strengthened and the pupils have an actual demonstration of the possibilities of music work as a vocation.

Other Opportunities

THERE IS an opportunity for the supervisor who plays the piano to accompany vocal and violin teachers and also to carry on ensemble classes. Two-piano work with four or eight hands is always popular. Nothing can take the place of four-hand playing for the development of piano sight-reading. Classes in vocal sight-reading can be organized. If the average choir or concert singer could be shown the value of a working knowledge of the fundamental principles of vocal sight-reading, many persons with fine voices would double their usefulness as choir and concert singers. The average grade teacher needs training in vocal sight-reading, and this group might form a nucleus for a class. The music supervisor has nearly an open field in vocal sight-reading teaching, as teachers of the voice often disregard this important side of vocal technic in favor of tone placement and song interpretation. Many of the churches need deputy organists, pianists and singers for the summer months and an opportunity exists for substitute service of this kind.

How Business Helps

I HAVE dwelt upon the possibilities of securing professional work during the summer months. I have not dwelt upon the fact that many school teachers go into business enterprises in various lines in order to make money and get a change in type of work. Newton said that "a change of work is play."

An amazing number of supervisors go to summer schools of music and take various courses in school music method. One summer school in the East had over seven hundred public school music pupils registered last summer and another had three hundred; and a school in the Middle West had over five hundred enrollments.

Practically every summer school of standing has courses in public school music. Music supervisors have been known to go back to certain summer schools to repeat courses year after year. They enjoy keeping up with the trend of school music education. Acquaintanceships are made and retained, fresh inspiration is found, and enthusiasm is engendered for the coming season's activities. The field of public school music has developed so broadly that an inspection of a summer school catalog of courses offered in school music is a revelation. Courses in sight reading from the elementary to the advanced grades, courses in ear training, courses in earlier and later elementary grade methods, Junior High School and Senior High School methods, Band and Orchestra methods, Choral and Orchestra methods and conducting courses in elementary theory, harmony, counterpoint, fugue and composition, orchestration, courses in history of music, literature of music, general appreciation, courses in folk dancing and others too numerous to mention. One university is offering sixty-nine separate courses in music for the summer session of 1926.

The Teacher's Degree

A DEGREE in public school music is well worth having as the recipient has had a fine training in the many and varied phases of the theory and p
of school music teaching and also h
to fulfill the requirements in acaden
pedagogical subjects.

Every school music teacher who
to advance in his chosen field shou
cure a degree. Many supervisor
pass examinations in certain elem
courses and enter the advanced c
Credit can be obtained for proficie
piano and vocal work. Some insti
offer twenty-five semester hours of
for these two subjects alone.

The large cities insist that all can
for music positions must have high
fications before they can be appoin
teachers and supervisors. A compar
small number of music supervisor
meet these requirements and consec
there are very few candidates for
positions. The ambitious supervis
easily secure a better position by
stock of his professional equipmen
this is found to be inadequate he
make up this deficiency by going to s
school. The scientific budget for
school man contains an item callin
expenditures for higher training.
it is a hardship for the small s
supervisor to spend his time and
for this necessary training, yet it
opens the way to future advancemen
recognition.

School and Summering

MANY summer music schools a
uated in summering places
combination of recreation and pleas
study is thus afforded. The rate
boarding and tuition are not high a
conditions are ideal for enthusiastic
Many persons who may feel that th
son's work has tired them out rea

school. She did not need extra c
credit as she was a post-graduate st
She enjoyed the contact with the wor
the school. The illness of her
mother made it necessary for her t
turn home every night.

Another peculiar reaction to su
school life is the desire to practice
study more intensively than the co
demand. Many supervisors who hav
desire to practice piano at home, cl
after the privilege to use the pra
pianos at summer school, and pay fo
privilege. Certain students invar
awaken the slumbers of the rest o
student body by practicing on the s
pipe organ early in the morning. T
same students neglect opportunities to
good pipe organs for practice in
home towns.

New Inspiration

WHAT IS this renewed inspiration
enthusiasm that is engendered
the summer session for school m
teachers? It is not easy to explain

(*Continued on page 607*)

In the summer months the good merchant, while customers are vacationing, uses his opportunity for taking stock and preparing orders for the busy season. The good teacher will be doing the same thing—looking over new studies and pieces for the coming season, thinking out new methods of adding interest to her work and storing up enthusiasm and vitality by country walks in the beauty of the summer mornings.

Making Your Playing Mean Something

By JEAN CORRODI MOOS

A Practical Working Plan by an Experienced Teacher

HAT INTERPRETATION is to music what the soul is to the human body may be accepted as a self-fact. No more is it to be ques-:han that the teaching of interpreta-ould be one of the main concerns of cher who sees in his calling more mere way of gaining a livelihood, ews his work as a means of deep-nd enriching the lives of those that nder his instruction. To what ex-owever, does the average teacher :o act upon this perception? Does lly in any systematic, logical way is pupils in this all-important phase work, as he trains them in the de-technical performance for instance? not true that most of us teach the f interpretation in a scrappy, piece-ray? We direct the pupil, for in-to stress this note, to *crescendo* ssage, to retard that one, and so confining ourselves to just the pas-hand. We rarely, perhaps never, m a reason for the desired modifica-time or force; nor do we acquaint ith those broader principles of etation which he on his own initia-ght employ in future cases. If his instinct is strong enough, of course, ht be able after much chafing and wrestling, to co-ordinate these ed facts of interpretation, and to despite his teacher, a consistent ar-yle of playing. The large majority endowed pupils, however, are con-l to flounder along painfully, con-themselves in the end that the more te aspects of their art are incom-ble, mysterious, wholly inaccessible lligence, thus weaving an extremely ient halo around the teacher's head. e might as well awake to the fact los, in our rationalistic world, are going out of style.

Element of Mystery

W IT is of course true that there an element of incommunciable y in any art, and particularly in the music. No one would be so fatuous end for instance that the finer spirit-alities of the really inspired artist's can be conveyed either by word printer's ink. But that merely em-s the necessity of conveying what conveyed with the utmost effective-

of course we meet with the objec-at the systematized teaching of in-ation is impracticable, that the tal-lo not need it, while the untalented profit by it. But this objection is without force. For through proper tion, the former having already mind the broader aspects of gen-erpretative tendencies, will save him-ich aimless and time-consuming ex-ntation in the laboratory of his ractice; and the latter, having been t within reach of a finished and ent, if not genuinely artistic style ying, will go surprisingly far in of even the more recondite aspects sical interpretation.

as groundless is the fear that the tion of concrete rules of expression encourage mental sloth on the play-rt, might indeed tend to turn an act ntaneous self-expression into a mere istic performance. For with all l the player may derive from such there are still enough of the finer of dynamic and rhythmic shading volved within his own self to keep om mentally idling at his task.

For one thing our system of notation is quite inadequate for recording the finer texture of the composer's thought. Short notes, for instance, are often used in the bass and the accompaniment where sustained effects are evidently intended. Then the tempo indications are often very vague. An *allegro,* for instance, in an early classic composition, is taken far more slowly than the same tempo in our hectic age, and the same with an *adagio.* Bach, moreover, usually gives no tempo prescription at all, and within the body of a composition, too, there prevails the widest latitude as regards time and force variation. The earlier composers again gave no interpretative suggestions at all and the best edited compositions today suggest no more than the broad ground colors of expression.

A player may do all his copy demands and still arrive at no more than a dry, wooden performance. Of course, one might mentally add, he might also follow every rule ever invented and still play in the same fashion. But just as the modern composer or editor aids the student by giving interpretative signs, so rules of interpretation extend this aid to those finer details where signs are inadequate. Best of all, they act as an incentive to self-expression.

No performance can be truly artistic unless the player resolves the composer's musical thought in the crucible of his own mind and then sends it forth colored by the warmth of his own imagination. Where the imaginative fires burn low such rules will compel the student to weigh and analyze his reactions and reclaim his performance from the dreary morass of insipidity.

Rhythm and Dynamics

THE double aspect of musical interpretation involving on the one hand rhythm (modifications of time) and on the other dynamics (modifications of force) is governed by two principles which indicate clearly the close relationship between these phases. The first might be called the principle of the Duality of Variations: *when a change in time is demanded in a composition there is also a tendency towards a change of force.* This is a rule that works both ways. An *accelerando,* for instance, usually invites a *crescendo;* a *crescendo* invites an *accelerando.* It needs must be well understood, however, that this principle covers only such broad, sweeping, well-sustained passages as show a pronounced development of mood. If it were carried into the minute, merely decorative details it might easily lead to caricature instead of sane artistic expression.

Of even greater practical import, because more frequently sinned against, is the principle of the Relativity of Variation: *Every change, both of time and force, is conditioned in amount and duration by the prevailing level of expression.* This is especially true of dynamic changes. If the dynamic level is low, that is, if a composition is prevailingly subdued, all changes are correspondingly attenuated, a *crescendo* calls for only a slight expression of tone, an accent requires but a gentle emphasis, a *forte* indicates merely a moderate tone-volume.

Conversely, in a spirited composition where the tone-level is higher, the dynamic changes are correspondingly more pronounced. This principle holds good, in a slightly different way, in time changes. The more marked the rhythm, especially in a fast tempo, the fewer and the slighter are the permissible time deviations. The less pronounced the rhythm, particularly in slow tempo, the more frequent and ample are the time variations. Co-ordination of the means of expression is perhaps more often disregarded than any other artistic demand, though this disregard is the common cause of so much false sentimentality, distortion and coarseness.

With these two broad principles in mind we may now pass on to some of the more detailed rules of interpretation. First let us address ourselves to the element of time. Considerations of time enter into an interpretation under two aspects, as tempo or permanent rate of speed on one hand and as temporary speed variations on the other. Little need be said regarding the former, since the metronome markings, now in almost universal use, make the composer's intentions evident. Where no tempo indications are given, as in Bach, a warning against the prevailing mania for increasing the tempo to the point where the average hearer is swamped by a welter of sounds may not come amiss. Whether the performer is carried away by his desire to turn a polyphonic work into a mere means of exhibiting his executive prowess, or whether familiarity with its contents has rendered its comprehension easy to him, the result is the same to the average listener whose mind is unable to keep pace with what he hears. Much of Bach's and other classic writers' unpopularity would disappear if performers were to make it a rule to play their works somewhat slower than the tempo which would seem most natural.

Diversity in Tempo

AS TO the ebb and flow of time within a composition, it is well to remember that uniformity of time progression is the fundamental fact in music. Yet in artistic music, when the emotional content is preponderating, where the moods expressed have a wider range and are more finely diversified, uniformity of time is absolutely unbearable. A sensitive, deeply musical player, in fact, scarcely, ever plays even a single measure in mathematically correct time. On the other hand, one can scarcely be too emphatic in denouncing the tempo distortions of, say, a Chopin performance, especially since it is well known that Chopin himself strongly discountenanced such spasmodic playing. Let us bear then in mind that liberty must be within the law, that the time rule, while it may be bent, may never be broken, and that the true artist is known by the refinement of his coloring and not by his emotional outbursts. We may now enumerate some of the more important conditions which demand tempo modification.

Since abstract rules without exemplification bear but little weight, we shall use for the purpose of illustration two compositions, of widely varying styles, so well known as to have become almost hackneyed compositions which combine with the advantage of accessibility the advantage of being only moderately difficult. They are the first movement of the first Beethoven *Sonata,* Op. 2 No. 1, and the Chopin *Nocturne in E flat,* Op. 9, No. 2. The numbers in the following specify the measures in which the illustrations may be found. B stands for Beethoven's *Sonata* and C for Chopin's *Nocturne.* Similar passages, as a rule, are mentioned but once.

The tempo is accelerated:

In ascending passages of melodic import: B 26; C 2, 6, 30-31.

In running passages forming mere connecting links: B 26-41; C 9-12.

Where passage work follows quiet melodic parts: B 26.

At the end of passionate compositions: B 150.

JEAN CORRODI MOOS

The tempo is retarded:

In descending passages of melodic import: B 7-8, 18-20; C 2, 11, 28.

At the close of song-like melodies: B 47-48; C 12, 16, 24.

In connecting links of melodic nature. B 18-19; C 12.

Before repetitions of important divisions: B 41-48, 99-100; C 12.

The Climax

IN A *crescendo* leading to an extremely powerful climax: B 151-152; C 31.

At the end of long ornamentations: C 33.

Before a pause: B 7-8; C 31-32; and before the introduction of a strikingly new key: B 80, 118, 541.

In a contrasting song-like theme: B 41-48.

A specific refinement of these time reflections, employed with special frequency and charm in slow, melodic passages, is known as the *Rubato*. In modern music, especially since Chopin, it is all-pervading, though it is erroneous to attribute this style of playing exclusively to modern times, since C. P. E. Bach already describes it as "one hand appearing to play against time while the other strictly observes the beat." This mode of time shading is usually restricted to the smaller phrase members and is so minute that, as suggested by the above quotations, it often does not involve the accompaniment. Essentially, it consists of a slight lingering on the important note of a phrase, followed, sometimes preceded, by a corresponding hurrying over the notes of less importance. It is a device so subtle that it can scarcely be subjected to rule, though like the just mentioned *ritardando* it also falls usually on the highest or longest note of a phrase, on a melodic turning point, a syncopation, a harmonic cue note, and so forth. Hence only a finely developed rhythmical feeling can be relied upon to tell the player where to employ it effectively. Rightly employed it invests the playing with an elusive charm. Wrongly employed—as, alas, it all too often is—it divests the performance of all claim to beauty.

Dynamic Modifications

JUST as an artistic performance avoids uniformity of time progression so, and in still higher degree, must it avoid a uniform dynamic level. In speaking of dynamic modifications, in fact, we touch upon the very essence of interpretation. For it is precisely the dynamic fluidity of music that makes it so pre-eminently the medium for carrying the constantly rising and falling emotional currents from mind to mind. On the other hand this very potency warns us against exaggeration. For few students, few artists, even, seem to know the secret of the effectiveness of a low tone level, or, knowing it, possess the artistic stamina to withstand the lure of the sensuous fullness of the modern piano tone. There is, of course, room for heroic treatment, but none for heroics; and much of modern playing is little more. Here again we must insist upon moderation, refinement, subtlety in place of the tawdriness and crudeness so often encountered.

Dynamic modifications may be viewed again under two aspects: the gradual change from one dynamic level to another (tone inflection; *crescendo diminuendo,* and so forth) and the abrupt change from one degree of tone force to another (accent). Strictly speaking, there are few really abrupt explosive accents in expressive music. In the vast majority of cases the stress points rather represent the crest of a slight and gradually forming dynamic wave. Yet there is no difficulty in distinguishing between the minute dynamic approach towards and departure from the accent and the much more gradual and considerable increase and decrease of tone strength required in the *crescendo* and *decrescendo.*

Dynamic Inflections

THE rules pertaining to dynamic inflection are few, but all-important:
